
Contents

Part I: Organic Assemblies	1
The Utilization of Persistent H-Bonding Motifs in the Self-Assembly of Supramolecular Architectures M.J. Krische, J.-M. Lehn	3
Controlling Hydrogen Bonding: From Molecular Recognition to Organogelation R.E. Meléndez, A.J. Carr, B.R. Linton, A.D. Hamilton	31
Heteroaromatic Modules for Self-Assembly Using Multiple Hydrogen Bonds S.C. Zimmerman, P.S. Corbin	63
Hydrogen-Bonded Liquid Crystals: Molecular Self-Assembly for Dynamically Functional Materials T. Kato	95
Part II: Inorganic Assemblies	147
Synergistic Effect of Serendipity and Rational Design in Supramolecular Chemistry R.W. Saalfrank, E. Uller, B. Demleitner, I. Bernt	149
Molecular Paneling Through Metal-Directed Self-Assembly M. Fujita	177
Pythagorean Harmony in the World of Metal {Mo₁₁} Oxygen Clusters of the Type: Giant Wheels and Spheres both Based on a Pentagonal Type Unit A. Müller, P. Kögerler, H. Bögge	203
Author Index Volumes 1–96	237

Molecular Self-Assembly

Organic Versus Inorganic Approaches

Fujita, M. (Ed.)

2000, X, 254 p. 84 illus., 3 illus. in color., Hardcover

ISBN: 978-3-540-66948-7
