Part I. From Maxwell's equations to ray optics

1. Introduction to Part I	3
1.1 A brief guide to the literature	3
1.2 Assumptions and notations	5
2. Light propagation in linear dielectric and permeable media ..	7
2.1 Maxwell's equations in linear dielectric and permeable media ..	7
2.2 Approximate-plane-wave families	14
2.3 Asymptotic solutions of Maxwell's equations	17
2.4 Derivation of the eikonal equation and transport equations ..	19
2.5 Discussion of the eikonal equation	24
2.6 Discussion of transport equations and the introduction of rays	31
2.7 Ray optics as an approximation scheme	36
3. Light propagation in other kinds of media	43
3.1 Methodological remarks on dispersive media	44
3.2 Light propagation in a non-magnetized plasma	46

Part II. A mathematical framework for ray optics

4. Introduction to Part II	61
4.1 A brief guide to the literature	61
4.2 Assumptions and notations	63
5. Ray-optical structures on arbitrary manifolds	67
5.1 Definition and basic properties of ray-optical structures	67
5.2 Regularity notions for ray-optical structures	76
5.3 Symmetries of ray-optical structures	82
5.4 Dilation-invariant ray-optical structures	87
5.5 Eikonal equation	92
5.6 Caustics	100

6. Ray-optical structures on Lorentzian manifolds 111

6.1 The vacuum ray-optical structure..... 111

6.2 Observer fields, frequency, and redshift 113

6.3 Isotropic ray-optical structures 120

6.4 Light bundles in isotropic media..... 123

6.5 Stationary ray-optical structures 131

6.6 Stationary ray optics in vacuum and in simple media..... 141

7. Variational principles for rays..... 149

7.1 The principle of stationary action: The general case 149

7.2 The principle of stationary action: The strongly regular case . 154

7.3 Fermat’s principle 156

7.4 A Hilbert manifold setting for variational problems 165

7.5 A Morse theory
for strongly hyperregular ray-optical structures 168

8. Applications 183

8.1 Doppler effect, aberration, and drag effect in isotropic media . 183

8.2 Light rays in a uniformly accelerated medium
on Minkowski space..... 190

8.3 Light propagation in a plasma on Kerr spacetime 193

8.4 Gravitational lensing..... 199
