Overview

Vertebrate Eye Development and Refractive Function: An Overview

Barbara Sivak and Jacob Sivak

1	Introduction and General Eye Development	1
1.1	Early Embryogenesis	1
1.2	Formation of the Optic Cup	2
1.3	Lens Development	4
1.4	Mesenchyme	5
1.5	Development of the Sclera, Choroid, Ciliary Body, and Iris . . .	5
1.6	Retina	7
1.7	Corneal Development	8
2	Eye Development and Optical Function	8
2.1	Cornea	8
2.2	Lens	10
3	Visual Environment and Eye Development	11
	References	13

Early Pattern Formation

Pax6 and the Genetic Control of Early Eye Development

Stefan Wawersik, Patricia Purcell, and Richard L. Mass

1	Introduction	15
2	<i>Pax6</i> Plays a Critical Role in Vertebrate Ocular Development . .	16
3	Molecular Biology of the <i>Pax6</i> Gene Product	18
4	Genomic Structure and Transcriptional Regulation of <i>Pax6</i> . . .	21
5	<i>Pax6</i> in <i>Drosophila</i> : Master Regulator or Network Manager? . .	23
6	From Fly to Mouse: Identifying <i>Pax6</i> Target Genes	26
7	Conclusions	29
	References	30

Early Retinal Development in *Drosophila*

Ulrike Heberlein and Jessica E. Treisman

1	Introduction	37
2	Specification of the Eye Primordium	37
3	Dorsal-Ventral Patterning and Growth of the Eye Disc	40
4	Initiation of Differentiation	41
5	How are Specification and Initiation Related?	43
6	Progression of Differentiation	44
	References	47

Embryonic Induction

Induction of the Lens

Nicolas Hirsch and Robert M. Grainger

1	Introduction	51
2	A Historical Overview of the Study of Lens Induction	51
3	Competence	56
4	Bias	57
5	Inhibition	60
6	Specification	61
7	Differentiation	62
8	Conclusions	64
	References	65

Retinal Differentiation

Molecular Control of Cell Diversification in the Vertebrate Retina

Sabine Fuhrmann, Lely Chow, and Thomas A. Reh

1	Introduction	69
2	Does a Code of Transcription Factors Define Retinal Cell Identities?	71
2.1	Homeodomain Transcription Factors	71
2.2	bHLH Transcription Factors	74
3	Do Extracellular Signals Define Retinal Identities?	76
3.1	Ganglion Cells	78
3.2	Horizontal Cells	79
3.3	Amacrine Cells	79
3.4	Photoreceptor Cells	80

3.5	Bipolar Cells	82
3.6	Müller Glia	82
4	Conclusion	83
	References	84

Cell Fate Specification in the *Drosophila* Retina

Justin P. Kumar and Kevin Moses

1	Introduction	93
2	The R8 Photoreceptor Cell	97
3	The R7 Photoreceptor Cell	102
4	Concluding Remarks	106
	References	107

Roles of the Extracellular Matrix in Retinal Development and Maintenance

Richard T. Libby, William J. Brunken, and Dale D. Hunter

1	Introduction	115
2	Multiple Extrinsic Cues are Involved in Retinal Development . .	116
3	Laminins	117
3.1	Photoreceptor Development	119
4	Laminins and Photoreceptor Development	121
4.1	Photoreceptor Fate Determination	121
4.2	Photoreceptor Morphogenesis: Inner and Outer Segment Development	124
4.3	Photoreceptor Synaptogenesis	125
5	Role of the Interphotoreceptor Matrix in Maintaining Photoreceptor Viability	128
5.1	Retinal Adhesion	129
5.2	Photoreceptor Survival	130
6	Conclusion	132
	References	133

Adhesive Events in Retinal Development and Function: The Role of Integrin Receptors

Dennis O. Clegg, Linda H. Mullick, Kevin L. Wingerd, Hai Lin, Jason W. Atienza, Amy D. Bradshaw, Dennis B. Gervin, and Gordon M. Cann

1	Introduction	141
1.1	The Integrin Family of Receptors	142
2	Integrins in the Developing Retina	142

2.1	Which Integrins are Expressed?	142
2.2	When and Where are Integrins Expressed?	143
2.3	What Functions Do Integrins Fulfill?	148
3	Integrins in the Mature Retina	151
4	Future Directions	152
	References	153

Formation of Neural Pathways for Vision

Connecting the Eye with the Brain:

The Formation of the Retinotectal Pathway

Karl G. Johnson and William A. Harris

1	Introduction	157
2	The Retinotectal Pathway	159
2.1	Navigation of the Optic Nerve Head	159
2.2	Exiting the Eye at the Optic Nerve Head	162
2.3	Fiber Organization in the Optic Nerve	163
2.4	Crossing at the Optic Chiasm	164
2.5	Climbing the Optic Tract Toward the Tectum	167
2.6	Target Recognition	169
2.7	Finding the Proper Tectal Target – Topographic Mapping	170
2.8	Preventing Retinal Axon Escape	172
3	Conclusion	172
	References	173

Regeneration

Regeneration of the Lens in Amphibians

Panagiotis A. Tsonis

1	Phylogeny	179
2	Histological and Cellular Events	179
3	Molecular Biology and Gene Regulation	183
3.1	Expression and Role of FGFs and FGFRs in Lens Regeneration	183
3.2	Regulatory Factors	186
3.2.1	Expression of Pax and Hox Genes	187
4	In Vitro Systems for Lens Regeneration	189
5	Clinical Applications	193
	References	194

How the Neural Retina Regenerates

Pamela A. Raymond and Peter F. Hitchcock

1	Neurogenesis and Neuronal Stem Cells	197
2	Regeneration of the Neural Retina in Adult Urodele Amphibians	198
2.1	The Classical Model of Retinal Regeneration	198
2.2	Molecular Mechanisms of RPE Transdifferentiation	199
3	Regeneration of the Neural Retina in Adult Teleost Fish	203
3.1	Source of the Regenerated Neurons – Stem Cells	203
3.2	Injury-Induced Gene Expression	206
3.3	Cellular and Synaptic Anatomy is Restored	208
3.4	Vision is Restored	210
4	A Model of Retinal Injury in Fish, Amphibians and Mammals	210
	References	212

Genetic Models

Mouse Mutants for Eye Development

Jochen Graw

1.	Introduction	219
2.	Mutations Affecting Early Eye Development	221
2.1	Mutations Affecting the Formation of the Lens Placode	221
2.2	Mutations Affecting the Optic Cup as the Prospective Retina	223
2.3	Mutations Affecting the Optic Stalk as the Prospective Optic Nerve	224
2.4	Mutations Affecting the Lens Vesicle	225
2.5	Further Genes Important for Early Eye Development	227
3.	Maturation of the Eye (1): Lens Development	227
3.1	Cataracts: Inherited Anomalies of the Lens	227
3.2	Differentiation Process in the Developing Lens– the Crystallin Connection	230
3.3	Senile Cataracts at the End of Development	234
3.4	Transgenic Mice to Study Cataract Formation	235
4	Maturation of the Eye (2): Cornea, Iris, and Ciliary Body	237
4.1	Mouse Mutants with Lens-Corneal Adhesion	237
4.2	Mutations Affecting the Anterior Eye Development	238
5	Maturation of the Eye (3): The Retina	239
5.1	Mutations Affecting the Formation of the Retina	239
5.2	Mutations Leading to the Retinal Degeneration	241
5.3	Mutations Affecting the Optic Nerve	243

6	Conclusions	245
	References	245

Genetic Analysis of Eye Development in Zebrafish

Jarema Malicki

1	Introduction	257
2	Genetic Screens in Zebrafish	260
3	Currently Available Eye Mutants	264
3.1	Specification of Eye Field and Optic Cup Morphogenesis	264
3.2	Growth of the Eye	267
3.3	Specification and Differentiation of Distinct Cell Populations	268
3.4	Patterning of Cell Populations	270
3.5	Cellular Survival	272
3.6	Targeting of Retinotectal Projections	273
3.7	Other Mutants	274
4	Future Prospects of Zebrafish Genetics	275
	References	277
	Subject Index	283

Vertebrate Eye Development

Fini, M.E. (Ed.)

2000, XIV, 288 p. 74 illus., 2 illus. in color., Hardcover

ISBN: 978-3-540-66719-3
