From Spontaneous to Induced Neurological Mutations: A Personal Witness of the Ascent of the Mouse Model

Pasko Rakic	1
1 Introduction	1
2 Beginning: The Values and Limits of Spontaneous Mutations . . .	3
3 Renaissance: New Opportunities and Induced Mutations	9
4 Epilogue	14
References	15

Mapping Genes that Modulate Mouse Brain Development: A Quantitative Genetic Approach

Robert W. Williams	21
1 Introduction	21
2 Why Brain Weight and Neuron Number Matter	22
2.1 Metabolic Constraints	22
2.2 Functional Correlates	22
2.3 Insights into CNS Development	23
3 Biometric Analysis of the Size and Structure of the Mouse CNS .	24
3.1 Precedents	24
3.2 A New Opportunity	24
3.3 Brain Weight is Highly Variable	25
3.4 Sex and Age Effects on Brain Weight	25
3.5 Large Differences Between Substrains	27
4 Mapping Brain Weight QTLs	27
4.1 QTLs Versus Mendelian Loci	27
4.2 Step 1: Assessing Trait Variation	27
4.3 Step 2: Estimating Heritability	29
4.4 Step 3: Phenotyping and Genotyping Members of an Experimental Cross	30
4.4.1 Phenotyping and Regression Analysis	31
4.4.2 Genotyping	33
4.5 Step 4: The Statistics of Mapping QTLs	34

4.5.1	Permutation Analysis	36
4.6	Cloning QTLs	38
4.7	Probability of Success	38
5	Neuron and Glial Cell Numbers in Adult Mice	39
5.1	The Mouse Brain Library at http://nervenet.org/mbl/mbl/html . .	40
5.2	Numbers of Neurons and Glial Cells in the Brain of a Mouse . .	41
6	Mapping QTLs that Modulate Neuron Number	42
6.1	Mapping Cell-Specific QTLs	42
6.2	The <i>Nncl</i> Locus	42
6.3	Mechanisms of QTL Action	43
6.4	Candidate Gene Analysis	43
7	Conclusion	44
	References	44

Genetic Interactions During Hindbrain Segmentation in the Mouse Embryo

Paul A. Trainor, Miguel Manzanares, and Robb Krumlauf	51
---	----

1	Introduction	51
1.1	Generation of Diversity in the Developing Nervous System	51
1.2	Segmental Organisation of the Hindbrain	53
2	Patterns of Gene Expression During Hindbrain Development . .	55
2.1	<i>Hox</i> Genes	55
2.2	Upstream Regulators of <i>Hox</i> Genes	58
2.3	Other Gene Families	59
3	Genetic Control of Hindbrain Patterning	61
3.1	Retinoic Acid Pathways	62
3.2	<i>Krox20</i> Targets	64
3.3	<i>Kreisler</i> Targets	66
3.4	<i>Hox</i> Gene Auto- and Cross-Regulation	67
4	Mutational Analyses of Gene Function	69
4.1	Segmentation Genes	69
4.2	Segment Identity Genes	72
5	Mechanisms of Hindbrain Segmentation	76
6	Conclusions	77
	References	78

Neurogenetic Compartments of the Mouse Diencephalon and some Characteristic Gene Expression Patterns

Salvador Martínez and Luis Puelles 91
