Centenarians and the Genetics of Longevity

Thomas Perls, Dellara F. Terry, Margery Silver, Maureen Shea,
Jennifer Bowen, Erin Joyce, Stephen B. Ridge, Ruth Fretts, Mark Daly,
Stephanie Brewster, Annibale Puca, and Louis Kunkel

1	Introduction	1
2	Are Centenarians a New Phenomenon?	2
3	Centenarians Are the Fastest Growing Age Group	3
4	Are Centenarians Different?	4
5	The Centenarian Phenotype: Compressing Morbidity Towards the End of Life	6
6	Evidence from Centenarians Supporting a Strong Genetic Influence upon Longevity	7
7	Siblings of Centenarians Live Longer	7
8	Parents of Centenarians also Achieve Unusually Old Age	8
9	Four Families with Clustering for Extreme Longevity	8
9.1	Mathematical Analysis	10
10	Middle-Aged Mothers Live Longer: An Evolutionary Link Between Reproductive Success and Longevity-Enabling Genes .	11
10.1	What Determines When a Woman Will Go Through Menopause?	12
10.2	Menopause: An Adaptive Response	13
10.3	Why Menopause Does Not Occur in Other Mammals?	13
10.4	Nonhuman Data Supporting the Association Between Delayed Reproductive Senescence and Increased Longevity	14
10.5	Alternative Explanations for Why Menopause Occurs	14
10.6	Why Is the Human Life Span 122 Years and What Is the Evolutionary Advantage for Living to Such an Age?	15
10.7	What If We Removed the Selective Force for Maximizing Life Span?	16
10.8	The Association Between Longevity-Enabling Genes and Genes Which Regulate Reproductive Health	16
11	In Our Near Future	16
