

Contents

1. The τ Lepton and the Third Family	1
1.1 The Discovery of the τ	1
1.2 A Member of a New Family?	3
1.3 Direct Observation	8
2. Experimental Aspects	11
2.1 Overview of Experiments	11
2.2 Kinematics	12
2.3 Event Displays	20
2.4 Selection of τ Pairs	21
2.5 Identification of the Decays	28
2.6 Monte Carlo Simulation	38
3. The Static Properties of the τ	45
3.1 The Mass	45
3.2 The Lifetime	53
3.3 Form Factors of the Electromagnetic and Weak Currents	64
3.4 Branching Ratios	72
4. Electroweak Physics at the Z^0 Pole	95
4.1 Precision Tests of the Standard Model	95
4.2 τ Production at the Z^0 Pole	97
4.3 Cross Sections and Asymmetries	102
4.4 Electroweak Physics at the SLC	105
4.5 Analyzing the Spin of a τ Lepton	108
4.6 τ Polarization	120
4.7 Results	132
5. Strong Interactions in τ Decays	137
5.1 Selection Rules	137
5.2 Theoretical Description of Hadronic τ Decays	143
5.3 Experimental Studies	163
5.4 Inclusive Decays	173

6. τ Physics at Hadron Colliders	195
6.1 Identification of τ Leptons	195
6.2 The τ and the Top Quark	197
6.3 Searches	199
6.4 W Decays	201
7. The τ Neutrino	203
7.1 The Mass	203
7.2 The Helicity	212
7.3 Electromagnetic Moments	217
8. The Lorentz Structure of the Charged Current	223
8.1 Generalization of the Weak Current	223
8.2 Hadronic Decays	235
8.3 Spin-Dependent Terms	237
8.4 The Current Experimental Situation	246
9. Searching for \mathcal{CP} Violation	253
9.1 \mathcal{CP} Violation in τ Production	253
9.2 \mathcal{CP} Violation in τ Decays	264
10. Rare and Forbidden Decays	269
10.1 Second-Class Currents	269
10.2 Forbidden τ Decays	272
10.3 Flavor-Changing Neutral Currents	277
10.4 Excited Leptons	279
10.5 New Heavy Leptons	283
11. Summary and Outlook	285
References	287
Index	311

Physics with Tau Leptons

Stahl, A.

2000, VIII, 317 p., Hardcover

ISBN: 978-3-540-66267-9
