

Table of Contents

1	Introduction	1
1.1	The Origins of the Exact Approach	2
1.2	Organization of the Monograph	6
<hr/>		
I	Underlying Concepts of Spatial Processes	
<hr/>		
2	The Regression Model	13
2.1	A Review of Ordinary Least Squares	13
2.2	Ordinary Least Squares with Correlated Disturbances	17
2.3	The Impact of Unaccounted Variables	18
2.3.1	The Two Stage Estimation Procedure	19
2.3.2	The Misspecified Regression Model	20
3	The Specification of Spatial Relations	23
3.1	Implementation of Spatial Structures	24
3.1.1	Typology of Spatial Objects	24
3.1.2	Relations between Spatial Objects	25
3.1.3	Similarity Versus Dissimilarity Relations	25
3.1.4	Functional Relationships in Relative Space	28
3.1.5	Coding Schemes of Spatial Structure Matrices	29
3.2	Some Special Spatial Structures	31
3.2.1	Regular Spatial Structures	31
3.2.2	Higher Order Link Matrices	32
3.2.3	A Link between the Contiguity Matrices and Spatial Configurations	33
3.2.4	Local Spatial Structures	34
4	Gaussian Spatial Processes	37
4.1	Blending the Disturbances with a Spatial Structure	37
4.1.1	The Internal Composition of Stochastic Spatial Processes	38
4.1.2	Constraining Assumptions on Spatial Stochastic Processes	40
4.1.3	Excursion: Non-Hierarchical Aggregation of Spatial Objects	41
4.2	Definition and Properties of Gaussian Spatial Processes	42
4.2.1	The Autoregressive Spatial Process	43
4.2.2	The Moving Average Process	46
4.2.3	Excursion: The Common Factor Constraint and the Spatial Lag Model	47
4.3	Testing for Gaussian Spatial Processes	47
4.3.1	Test Principles for Spatial Autocorrelation in Regression Residuals	49
4.3.2	Statistical Properties of the Moran's I Test	51

II Development and Properties of Moran's I 's Distribution

5 The Characteristic Function	59
5.1 General Properties of the Characteristic Function	59
5.2 The Inversion Theorem	61
5.3 Distribution of a Weighted Sum of χ^2 -Distributed Variables	63
5.4 Extensions and Comments	66
6 Numerical Evaluation of Imhof's Formula	67
6.1 Influential Weights in Imhof's Formula	67
6.2 A Numerical Example	67
6.3 The Behavior of the Integrand at the Origin	68
6.4 Derivation of an Upper Truncation Point	69
6.5 Numerical Algorithms to Approximate Imhof's Formula	70
6.5.1 Equally Spaced Step-Size	71
6.5.2 Variable Spaced Step-Size	72
7 The Exact Distribution of Moran's I	75
7.1 Derivation of the Distribution under the Influence of a Spatial Process	75
7.1.1 Transformation into Independent Random Variables	76
7.1.2 Transformation of Moran's I into a Simple Quadratic Form	77
7.1.3 Determination of the Weights	77
7.1.4 Discussion	78
7.2 Simplifications under the Assumption of Spatial Independence	79
7.2.1 Independence of the Eigenvalue Spectrum from the Denominator	80
7.2.2 Shifts in the Eigenvalue Spectrum in Dependence of Moran's I 's Observed Value	82
7.2.3 Bounding Distributions of Moran's I to Obtain Independence from the Projection Matrix	83
8 The Shape of Moran's I Exact Distribution	89
8.1 The Feasible Range of Moran's I	89
8.2 Specific Eigenvalue Spectra and Moran's I 's Distribution	90
8.2.1 Small Irregular Spatial Tessellations	91
8.2.2 Large Regular Spatial Tessellations	93
9 The Moments of Moran's I	99
9.1 The Moments under the Assumption of Spatial Independence	99
9.1.1 The Theorem by Pitman	99
9.1.2 The Expectations of Moran's I Numerator and Denominator	100
9.1.3 Eigenvalue or Trace Expressions for the Central Moments	101
9.2 The Conditional Moments of Moran's I	102
9.3 Correlation between Different Spatial Structures	105
9.4 Some Applications Using Moran's I 's Theoretical Moments	106

9.4.1	Approximations of Moran's I 's Distribution by its Moments	106
9.4.2	Potential Applications of Moran's I 's Conditional Expectation . .	108

III An Empirical Application of Moran's I 's Exact Conditional Distribution

10	The Basic Ecological Model and Spatial Setting	117
10.1	The Setting of the Regression Model	118
10.2	The Spatial Setting	122
10.2.1	Rationale for an Underlying Spatial Process in Disease Rates . .	123
10.2.2	Approximation of a Hierarchical Migratory Graph	124
10.2.3	Testing for Inherent Spatial Autocorrelation	128
11	A Spatial Analysis of the Cancer Data	129
11.1	Linking Moran's I to an Autoregressive Spatial Process	129
11.2	Exploratory Analysis by means of Local Moran's I_i ,	131
11.2.1	Local Moran's I_i as Ratio of Quadratic Forms	132
11.2.2	The Conditional Distribution of Local Moran's I_i ,	133
11.2.3	Correlation between Local Moran's I_i	136
11.2.4	Impact of the Local Regression Residuals	138
11.3	The Identification of a Prevailing Spatial Process	140
11.3.1	The Power Function of Global Moran's I	141
11.3.2	Identification of a Spatial Process by a Non-Nested Test	142
11.4	Discussion	144
12	Conclusions	147
	References	153
	Index	163

Modelling Spatial Processes

The Identification and Analysis of Spatial Relationships
in Regression Residuals by Means of Moran's I

Tiefelsdorf, M.

2000, XVIII, 167 p. 14 illus., Softcover

ISBN: 978-3-540-66208-2
