

Table of Contents

Preface	V
1. Lie Groups and Lie Algebras	
1.1 Lie Groups and their Lie Algebras	1
1.2 Examples	6
1.3 The Exponential Map	16
1.4 The Exponential Map for a Vector Space	20
1.5 The Tangent Map of Exp	23
1.6 The Product in Logarithmic Coordinates	26
1.7 Dynkin's Formula	29
1.8 Lie's Fundamental Theorems	31
1.9 The Component of the Identity	36
1.10 Lie Subgroups and Homomorphisms	40
1.11 Quotients	49
1.12 Connected Commutative Lie Groups	58
1.13 Simply Connected Lie Groups	62
1.14 Lie's Third Fundamental Theorem in Global Form	72
1.15 Exercises	81
1.16 Notes	86
References for Chapter One	90
2. Proper Actions	
2.1 Review	93
2.2 Bochner's Linearization Theorem	96
2.3 Slices	98
2.4 Associated Fiber Bundles	100
2.5 Smooth Functions on the Orbit Space	103
2.6 Orbit Types and Local Action Types	107
2.7 The Stratification by Orbit Types	111
2.8 Principal and Regular Orbits	115
2.9 Blowing Up	122
2.10 Exercises	126
2.11 Notes	129
References for Chapter Two	130

3. Compact Lie Groups	
3.0 Introduction	131
3.1 Centralizers	132
3.2 The Adjoint Action	139
3.3 Connectedness of Centralizers	141
3.4 The Group of Rotations and its Covering Group	143
3.5 Roots and Root Spaces	144
3.6 Compact Lie Algebras	147
3.7 Maximal Tori	152
3.8 Orbit Structure in the Lie Algebra	155
3.9 The Fundamental Group	161
3.10 The Weyl Group as a Reflection Group	168
3.11 The Stiefel Diagram	172
3.12 Unitary Groups	175
3.13 Integration	179
3.14 The Weyl Integration Theorem	184
3.15 Nonconnected Groups	192
3.16 Exercises	199
3.17 Notes	202
References for Chapter Three	206
4. Representations of Compact Groups	
4.0 Introduction	209
4.1 Schur's Lemma	212
4.2 Averaging	215
4.3 Matrix Coefficients and Characters	219
4.4 G-types	225
4.5 Finite Groups	232
4.6 The Peter-Weyl Theorem	233
4.7 Induced Representations	242
4.8 Reality	245
4.9 Weyl's Character Formula	252
4.10 Weight Exercises	263
4.11 Highest Weight Vectors	285
4.12 The Borel-Weil Theorem	290
4.13 The Nonconnected Case	306
4.14 Exercises	318
4.15 Notes	322
References for Chapter Four	326
Appendices and Index	
A Appendix: Some Notions from Differential Geometry ..	329
B Appendix: Ordinary Differential Equations	331
References for Appendix	338

Lie Groups

Duistermaat, J.J.; Kolk, J.A.C.

2000, VIII, 344 p., Softcover
