

# Table of Contents

<b>1</b>	<b>Introduction</b>	<b>1</b>
1.1	Need for High Temperature Materials	1
1.2	High Temperature Materials	3
1.3	Historical Development of High Temperature Materials	4
<b>2</b>	<b>Design and Manufacture</b>	<b>9</b>
2.1	Plant Design and Material Selection	9
2.2	Component Manufacture	11
2.3	Process Models	14
2.4	Component Life Extension	17
<b>3</b>	<b>Requirements of High Temperature Materials</b>	<b>19</b>
3.1	Environmental Resistance	19
3.1.1	Oxidation	20
3.1.2	Sulphidation	22
3.1.3	Salt- and Ash-Deposit Corrosion	22
3.1.4	Carburisation	24
3.2	Erosion	24
3.3	Wear	25
3.4	Mechanical Behaviour	25
3.4.1	Zero Time Deformation	25
3.4.2	Creep	26
3.4.3	Mechanical Fatigue	28
3.4.4	Thermo-Mechanical Fatigue	31
3.4.5	Corrosion-Fatigue	32
3.5	Physical Properties	33
<b>4</b>	<b>Increasing Temperature Capability</b>	<b>35</b>
4.1	Metallic Materials	35

4.1.1	Solid Solution Strengthening .....	36
4.1.2	Precipitation Strengthening .....	37
4.1.3	Dispersion Strengthening .....	39
4.1.4	Grain Size and Grain Boundary Effects .....	39
4.1.5	Environmental Resistance .....	41
4.2	Ceramic Materials .....	46
4.2.1	Phase Control .....	46
4.2.2	Defect Tolerance .....	46
4.2.3	Thermal Shock Resistance .....	48
4.3	Composite Materials .....	49
<b>5</b>	<b>Steels .....</b>	<b>52</b>
5.1	Ferritic Heat Resistant Materials .....	52
5.2	Creep Resisting Martensitic Steels .....	54
5.3	Austenitic Steels .....	58
5.3.1	Corrosion Resistant Austenitic Steels .....	58
5.3.2	High Strength Austenitic Steels .....	62
5.4	Controlled Transformation Stainless Steels .....	62
<b>6</b>	<b>Cast Iron .....</b>	<b>64</b>
6.1	Grey Cast Irons .....	64
6.2	Spheroidal Graphite Irons .....	65
6.3	Austenitic Irons .....	65
<b>7</b>	<b>Nickel Alloys .....</b>	<b>68</b>
7.1	Oxidation and Corrosion Resistant Nickel Alloys .....	68
7.2	Nickel Superalloys .....	69
7.2.1	Alloy Composition-Dominated Developments .....	71
7.2.2	Developments Dependent on Process and Alloy Composition .....	75
7.2.3	Process Dominated Developments .....	77
<b>8</b>	<b>Cobalt Alloys .....</b>	<b>83</b>
<b>9</b>	<b>Refractory Metals .....</b>	<b>86</b>
<b>10</b>	<b>Titanium .....</b>	<b>90</b>
10.1	Production .....	90
10.2	Alloys .....	91

---

10.3 Component Manufacture.....	94
<b>11 Intermetallic Materials .....</b>	<b>97</b>
11.1 Titanium Aluminides .....	98
11.2 Nickel Aluminides.....	100
11.3 Iron Aluminides.....	102
11.4 Speculative Intermetallics .....	102
<b>12 Cermets .....</b>	<b>104</b>
12.1 Cemented Carbide Cutting Tools .....	104
12.2 Wear Resistant Coatings.....	106
<b>13 Refractories and Insulating Materials .....</b>	<b>111</b>
<b>14 Engineering Ceramics.....</b>	<b>115</b>
14.1 Manufacture.....	115
14.2 Properties.....	116
14.3 Alumina .....	118
14.4 Zirconia.....	119
14.5 Silicon Carbide .....	121
14.6 Silicon Nitride .....	123
14.7 Glass Ceramics.....	126
<b>15 High Temperature Composite Materials .....</b>	<b>127</b>
15.1 Metal Matrix Composites.....	129
15.2 Titanium Matrix Composites .....	130
15.3 Carbon and Carbon-Carbon Composites .....	132
15.4 Ceramic Matrix Composites .....	135
15.5 Intermetallic Matrix Composites .....	138
<b>16 Coatings for High Temperature Materials .....</b>	<b>140</b>
16.1 Corrosion/Oxidation Resistant Coatings.....	141
16.2 Thermal Barrier coats .....	144
<b>References .....</b>	<b>148</b>
<b>Subject Index .....</b>	<b>159</b>

Materials for High Temperature Engineering  
Applications

Meetham, G.W.; Van de Voorde, M.H.

2000, IX, 164 p. 82 illus., Hardcover

ISBN: 978-3-540-66861-9
