

Contents

1	Introduction	1
2	Basic Equations of Groundwater Flow	3
2.1	Basic Principles of Hydrodynamics	3
2.1.1	Eulerian and Lagrangian Formulations	3
2.1.2	Equilibrium of Forces in Fluid	6
2.1.3	Rate of Deformation	7
2.1.4	Navier-Stokes Equations	9
2.1.5	Potential Flow	10
2.2	Flow Through the Saturated Zone	12
2.2.1	Groundwater and Its Potential	13
2.2.2	Properties of Porous Media	14
2.2.3	The Darcy's Law	16
2.2.4	Basic Equations of Groundwater Flow	19
2.2.5	Inflows and Outflows	22
2.2.6	Two-Dimensional Case	23
2.2.7	Girinski Potential	25
2.2.8	Basic Boundary and Initial Conditions	27
2.3	Flow Through the Unsaturated Zone	28
2.3.1	Retention Curve	28
2.3.2	Governing Equations of the Unsaturated Flow	30
2.3.3	Boundary and Initial Conditions	32
	References	33
3	Basic Equations of Transport of Pollutants in Porous Media	35
3.1	Miscible Displacement	35
3.1.1	Fick's Law, Coefficient of Dispersion	36
3.1.2	Governing Equation of Transport	39
3.1.3	Sorption and Decay of Pollutants	41
3.2	Transport of Immiscible Pollutants	45
3.2.1	General Law of Darcy	45
3.2.2	Basic Equation of Multiphase Flow	46
3.2.3	General Rules of Motion of Insoluble Substances in Porous Media	47
	References	48

4	Weighted Residuals Method	49
4.1	Basic Terms and Definitions	49
4.1.1	Spaces	49
4.1.2	Operators	50
4.1.3	Function Spaces, Base Functions	50
4.2	Weighted Residuals Method	52
4.2.1	Moments Method	53
4.2.2	Collocation Method	54
4.2.3	Galerkin Method	54
4.2.4	Ritz Method	55
4.3	Weak Solution	55
4.4	Inverse Formulation	57
4.5	Numerical Methods Used in Problems of Groundwater Hydraulics	58
	References	60
5	Mathematical Models of Groundwater Flow	61
5.1	Groundwater Flow in the Saturated Zone	61
5.1.1	Analytic Solution	61
5.1.2	Finite Differences Method	64
5.1.3	Finite Element Method	69
5.1.4	The Boundary Element Method	84
5.1.5	Dual Reciprocity Method (DRM)	100
5.2	Flow in Unsaturated Zone	101
5.2.1	Analytic Solutions	102
5.2.2	Finite Differences Method	102
5.2.3	Finite Element Method	103
5.2.4	Collocation Method	106
	References	107
6	Mathematical Models of Transport of Miscible Pollutants	109
6.1	Basic Methods	110
6.1.1	Analytic Solution	111
6.1.2	Finite Element Method	111
6.1.3	Dual Reciprocity Method	113
6.1.4	Method of Characteristic Curves	116
6.1.5	Random Walk Method	117
6.2	Equilibrium Sorption	119
6.2.1	Analytic Solution	120
6.2.2	Finite Element Method	120
6.2.3	Particle Methods	121
6.3	Non-Equilibrium Sorption	122
6.3.1	Finite Element Method	122
6.3.2	Random Walk Method	123
	References	124

7	Comparison of Properties of All the Methods	125
7.1	Groundwater Flow Models	125
7.2	Models of Transport of Pollution	129
8	Examples of the Use of Models in Practice	131
8.1	Models to Determine Groundwater Resources	131
8.2	Models to Assess Different Influences on Groundwater	131
8.2.1	Example of Zilina Locality, Slovakia	131
8.2.2	Example of Ziar Locality, Slovakia	138
8.2.3	Example of SNP Square, Bratislava, Slovakia	145
8.3	Remediation Models	153
8.3.1	Example of Chotebor, Czech Republic	153
8.3.2	Example of Airport Bratislava, Slovakia	164
	References	174
9	Description of Software Included in This Book	175
9.1	BEFLOW System	175
9.1.1	Program BemInp	177
9.1.2	Program BemSolve	186
9.1.3	Program BemIsol	193
9.1.4	Program BemStream	196
9.1.5	Program BemRaw	201
9.2	System UNSDIS	207
9.2.1	Basic Relations	207
9.2.2	Commands of Program	209
9.3	Examples	212
9.3.1	System BEFLOW	212
9.3.2	Program UNSDIS	217
	References	218
	Subject Index	219

Numerical Models in Groundwater Pollution

Kovarik, K.

2000, IX, 224 p., Hardcover

ISBN: 978-3-540-66792-6
