Modeling and Synthesis of Behavior, Control and Data Flow	1
<i>Raul Camposano, Andrew Seawright, Joseph Buck</i>	
1 Introduction	1
2 Behavioral Synthesis	3
3 High-Level Control	15
4 Data Flow	24
5 Conclusion	42
References	42
Cell-based Logic Optimization	49
<i>Giovanni De Micheli</i>	
1 Introduction	49
2 Problem Formulation and Analysis	49
3 Algorithms for Library Binding	52
4 Boolean Matching	60
5 Generalized Matching	78
6 Conclusion	83
References	84
A Design Flow for Performance Planning: New Paradigms for Iteration Free Synthesis	89
<i>Ralph H.J.M. Otten</i>	
1 Introduction	89
2 Flow Components	92
3 Layout Synthesis	99
4 Placement Versus Floorplan Design	101
5 Global Wires	115
6 Wire Planning	122
7 Gate Sizing	127
8 Conclusions	137
References	138
Test and Testable Design	141
<i>Hans-Joachim Wunderlich</i>	
1 Introduction	141
2 Defect Analysis and Fault Modeling	143
3 External Testing	155
4 Self-Testable Systems-On-Chip	162
References	185

Machine Assisted Verification	191
<i>Hans Eueking</i>	
1 Introduction	191
2 Logic Verification	195
3 Bit-Vector and Word-Level Verification	207
4 Verification by Fixed-Point Calculations	211
5 Verification Techniques for Bounded State Sequences	218
6 Formally Correct Construction of Pipelined Systems	231
References	238
 Models of Computation for System Design	 243
<i>Luciano Lavagno, Alberto Sangiovanni-Vincentelli, and Ellen M. Sentovich</i>	
1 Introduction	243
2 MOCs: Basic Concepts and the Tagged Signal Model	248
3 Common Models of Computation	261
4 Codesign Finite State Machines	276
5 Conclusions	289
References	292
 Modular Design for the Java Virtual Machine Architecture ...	 297
<i>Egon Börger and Wolfram Schulte</i>	
1 Introduction	297
2 The Trustful Virtual Machine	301
3 The Defensive Virtual Machine	313
4 The Diligent Virtual Machine	323
5 The Dynamic Virtual Machine	334
6 Related and Future Work	344
7 The JVM Abstract State Machine	346
References	356

Architecture Design and Validation Methods

Börger, E. (Ed.)

2000, X, 357 p., Hardcover

ISBN: 978-3-540-64976-2
