

Contents

1. Introduction	1
2. General Properties of Wave Functions	5
2.1 Asymptotic Form of Wave Functions	5
2.2 Asymptotic Perturbed Wave Function	8
2.3 Wave Function for $r_{ij} \rightarrow 0$	10
2.4 Wave Function for r_{ij} and $r_{ik} \rightarrow 0$	12
2.5 Local Satisfaction of Schrödinger Equation	13
2.6 Variational Stationary Property	14
2.7 Variational Approach to Perturbations	15
2.8 Generalised Virial Theorem	17
2.9 A Simple Example	19
3. Two- and Three-Electron Atoms and Ions	21
3.1 A Simple Wave Function	21
3.1.1 Energy	22
3.1.2 Multipolar Potential Perturbation	23
3.1.3 Third Order Energy Shifts	25
3.2 Wave Functions Satisfying Cusp, Coalescence and Asymptotic Conditions	25
3.2.1 Behaviour for $r_i \rightarrow 0$	26
3.2.2 Correlation Function	27
3.2.3 Results for the Unperturbed Ground State	28
3.2.4 Multipolar Polarizabilities and Hyperpolarizabilities	31
3.2.5 Wave Functions for Excited States	33
3.3 Three-Electron Wave Functions	36
4. Polarizabilities and Dispersion Coefficients	41
4.1 Polarizabilities	41
4.1.1 Perturbative Expression	42
4.1.2 Hyperpolarizabilities	43
4.1.3 Dynamic Polarizabilities	44
4.2 Dispersion Coefficients	46
4.2.1 Relation to Dynamic Polarizabilities	48

4.2.2	Three-Body Dispersion Coefficients	49
4.3	Alkali Isoelectronic Sequences	51
4.3.1	The Wave Function	51
4.3.2	Polarizabilities	52
4.3.3	Hyperpolarizabilities and Dispersion Coefficients	56
4.4	Asymptotic Polarizabilities and Dispersion Coefficients	58
4.4.1	Asymptotic Polarizabilities	58
4.4.2	Polarizabilities of He and Ne Systems	60
4.4.3	Asymptotic Behaviour of the Effective Energy	62
4.4.4	Dispersion Coefficients for H, He and Ne	65
5.	Asymptotically Correct Thomas–Fermi Model Density	69
5.1	Thomas–Fermi Model	69
5.1.1	Statistical Approach	70
5.1.2	WKB Approach	70
5.2	Solution for the Thomas–Fermi Density	71
5.3	Asymptotic Density	72
5.4	Modified Density	73
5.5	Applications	75
5.5.1	Expectation Values $\langle r^{2n} \rangle$	75
5.5.2	Multipolar Polarizabilities	77
5.5.3	Dispersion Coefficients	77
6.	Molecules and Molecular Ions	
	with One and Two Electrons	85
6.1	Wave Functions for One-Electron Molecular Ions	86
6.1.1	Cusp Condition	86
6.1.2	Asymptotic Behaviour	87
6.2	Energies for One-Electron Molecular Ions	89
6.3	Wave Function for H_2 and He_2^{++}	91
6.3.1	Molecular Orbital Type of Wave Function	91
6.3.2	Atomic Orbital Type of Wave Function	92
6.3.3	General Wave Function	93
6.3.4	Correlation Function	94
6.4	Results for the Ground State	96
6.4.1	Ground State Energies	96
6.4.2	Discussion	98
7.	Interaction of an Electron with Ions, Atoms, and Molecules	105
7.1	Atomic Rydberg States	105
7.1.1	Perturbation Approach for Anti-symmetric Wave Functions	105
7.1.2	The Perturbed Hamiltonian	107
7.1.3	Asymptotic Core Density and Density Matrix	108
7.1.4	Penetration Energy	109

7.1.5	Exchange Energy	110
7.1.6	Second Order Terms	111
7.1.7	Total Energy Shift	112
7.1.8	Results	113
7.2	Electron–Atom and Electron–Molecule Scattering at High Energies	115
7.2.1	Perturbation Series for the Scattering Amplitude	115
7.2.2	Scattering Amplitude at High Energies	117
7.2.3	Electron–Atom Scattering	118
7.2.4	Electron–Molecule Scattering	120
8.	Exchange Energy of Diatomic Systems	127
8.1	Exchange Energy of Dimer Ions	127
8.1.1	Exchange Energy of the H_2^+ Molecular Ion by Surface Integral Method	128
8.1.2	Exchange Energy of Multielectron Dimer Ions	133
8.2	Exchange Energy of Diatomic Molecules	136
8.2.1	Exchange Energy of the H_2 Molecule	136
8.2.2	Exchange Energy of Multielectron Diatomic Molecules	144
9.	Inter-atomic and Inter-ionic Potentials	147
9.1	Exchange Energy and Exchange Integral in the Heitler–London Theory	148
9.2	Generalized Heitler–London Theory	150
9.2.1	Unsymmetrized (Polarization) Perturbation Method ..	150
9.2.2	Symmetry Imposed Generalised Heitler–London Equation	151
9.2.3	Asymptotic Exchange Energy and Polarization Approximation	153
9.3	Inter-atomic and Inter-ionic Potentials	154
9.3.1	The $^3\Sigma_u$ State Potential of the H_2 Molecule	154
9.3.2	The $^2\Sigma_u$ State Potentials of Alkali Dimer Cations	156
9.3.3	The Potential of Rare Gas Dimers	157
10.	Proton and Neutron Densities in Nuclei	161
10.1	Semi-phenomenological Density	161
10.2	Determination of the Parameters	162
10.3	Results	164
	References	169

Asymptotic Methods in Quantum Mechanics

Application to Atoms, Molecules and Nuclei

Patil, S.H.; Tang, K.T.

2000, XI, 174 p., Hardcover

ISBN: 978-3-540-67240-1
