

Table of Contents

Overlap Fermions and Matrix Functions

The Overlap Dirac Operator	1
<i>Herbert Neuberger</i>	
Solution of $f(A)x = b$ with Projection Methods for the Matrix A	18
<i>Henk A. van der Vorst</i>	
A Numerical Treatment of Neuberger's Lattice Dirac Operator	29
<i>Pilar Hernández, Karl Jansen, Laurent Lellouch</i>	
Fast Methods for Computing the Neuberger Operator	40
<i>Artan Boriçi</i>	

Light Quarks, Lanczos and Multigrid Techniques

On Lanczos-Type Methods for Wilson Fermions	48
<i>Martin H. Gutknecht</i>	
An Algebraic Multilevel Preconditioner for Symmetric Positive Definite and Indefinite Problems	66
<i>Arnold Reusken</i>	
On Algebraic Multilevel Preconditioning	84
<i>Yvan Notay</i>	
On Algebraic Multilevel Preconditioners in Lattice Gauge Theory	99
<i>Björn Medeke</i>	

Flavor Singlet Operators and Matrix Functionals

Stochastic Estimator Techniques for Disconnected Diagrams	115
<i>Stephan Güsken</i>	
Noise Methods for Flavor Singlet Quantities	127
<i>Walter Wilcox</i>	

Novel Numerical Techniques for Full QCD

A Noisy Monte Carlo Algorithm with Fermion Determinant	142
<i>Keh-Fei Liu</i>	
Least-Squares Optimized Polynomials for Fermion Simulations	153
<i>István Montvay</i>	

VIII Table of Contents

One-Flavour Hybrid Monte Carlo with Wilson Fermions	166
<i>Thomas Lippert</i>	
Author Index	177
Subject Index	178

Numerical Challenges in Lattice Quantum
Chromodynamics

Joint Interdisciplinary Workshop of John von Neumann

Institute for Computing, Jülich, and Institute of Applied

Computer Science, Wuppertal University, August 1999

Frommer, A.; Lippert, Th.; Medeke, B.; Schilling, K. (Eds.)

2000, VIII, 188 p. 1 illus., Softcover

ISBN: 978-3-540-67732-1
