

# Table of Contents

## **The Many Roles of Viscosity in Solid Mechanics**

|  |    |
|--|----|
| Stuart S. Antman .....                                       | 1  |
| 1. Introduction.....   | 1  |
| 2. A two-dimensional shearing problem.....                   | 1  |
| 3. Self-sustained oscillations of a viscoelastic layer ..... | 4  |
| 4. Longitudinal motions .....                                | 5  |
| 5. Longitudinal motions of incompressible rods .....         | 6  |
| 6. The motion of rods in space .....                         | 8  |
| 7. Shocks and viscosity .....                                | 9  |
| References .....   | 10 |

## **Multiscale Approach to a Basic Problem of Materials Mechanics (Propagation of Phase-Transition Fronts)**

|   |    |
|---|----|
| G rard A. Maugin .....  | 11 |
| 1. Introduction.....  | 11 |
| 2. Microscopic condensed-matter-physics approach: solitonics .....                      | 12 |
| 3. Macroscopic engineering approach: singular surface and thermodynamic criterion ..... | 13 |
| 4. Mesoscopic applied-mathematics approach: structured front .....                      | 16 |
| 5. Theoretical-physics approach: quasi-particle and transient motion ..                 | 16 |
| 6. Numerics: from finite-differences to continuous cellular automata...                 | 17 |
| 6.1 Finite-Difference Method .....  | 17 |
| 6.2 Finite-Element Method .....   | 18 |
| 6.3 Finite-Volume Method and cellular automaton.....                                    | 18 |
| 7. Conclusion .....   | 19 |
| References .....  | 21 |

**Section 1: Two and Multiphase Flows**

Edited by H. Herrmann and S. Schwarzer . . . . . 23

**Analysing Particle Sedimentation in Fluids by  
Measure-Valued Stochastic Processes**

Christian Hesse and Armin Dunz . . . . . 25

- 1. Introduction . . . . . 25
- 2. System analysis by measure-valued stochastic processes . . . . . 27
- 3. Sedimentation in 1-d . . . . . 30
- References . . . . . 33

**Phenomenological Model of Sedimentation-Consolidation  
Processes**

R. Bürger . . . . . 34

- 1. Introduction . . . . . 34
- 2. Phenomenological sedimentation-consolidation model . . . . . 34
- 3. Analysis of the initial-boundary value problem . . . . . 37
- 4. Comparison with experimental data . . . . . 38
- 5. Conclusions and directions of future research . . . . . 40
- References . . . . . 40

**The Structure of Bidisperse Suspensions at Low Reynolds  
Numbers**

K. Höfler and S. Schwarzer . . . . . 42

- 1. Introduction . . . . . 42
- 2. Numerical method . . . . . 42
- 3. Bidisperse suspensions . . . . . 44
- 4. An advection-diffusion model for polydisperse suspensions . . . . . 46
- References . . . . . 49

**Lattice Boltzmann Simulations of Complex Multiphase Flows**

M. Krafczyk, P. Lehmann, O. Filippova, D. Hänel and U. Lantermann . 50

- 1. Lattice-Boltzmann simulation of gas-particle flow  
in complex geometry . . . . . 50
  - 1.1 Introduction . . . . . 50
  - 1.2 Method and results . . . . . 51
- 2. Direct calculation of hysteresis by Lattice-Boltzmann simulations . . 54
  - 2.1 Introduction . . . . . 54
  - 2.2 Hysteresis . . . . . 54
  - 2.3 Method and results . . . . . 55
  - 2.4 Discussion . . . . . 56
  - 2.5 Acknowledgements . . . . . 57
- References . . . . . 57

**Interface Tracking in Multiphase Flows**

|  |    |
|--|----|
| A.-K. Tornberg and B. Engquist .....                     | 58 |
| 1. Introduction.....                                     | 58 |
| 2. The multiphase flow equations .....                   | 59 |
| 2.1 Discretization .....                                 | 60 |
| 3. The segment projection method.....                    | 62 |
| 4. Comparison of three methods for a buoyant bubble..... | 63 |
| References .....   | 65 |

**Section 2: Mechanics of Materials and Multiscaling**

|                          |    |
|--------------------------|----|
| Edited by C. Miehe ..... | 67 |
|--------------------------|----|

**Finite Element Computation of Macroscopic Quantities in  
Nonconvex Minimisation Problems and Applications in  
Materials Science**

|  |    |
|--|----|
| Sören Bartels, Carsten Carstensen and Petr Plecháč .....                   | 69 |
| 1. Introduction.....   | 69 |
| 2. Scalar double-well problem and its numerical solution .....             | 71 |
| 3. Numerical analysis of linearised phase transitions in elastic solids .. | 76 |
| References .....   | 79 |

**Homogenization of an Initial-Boundary Value Problem  
Describing Evolving Microstructure**

|  |    |
|--|----|
| Hans-Dieter Alber .....  | 80 |
| 1. Introduction.....   | 80 |
| 2. A mathematical model with sharp phase interfaces .....                              | 80 |
| 2.1 Equations for the stress, displacement and internal variables ...                  | 80 |
| 2.2 Evolution equation for the phase interface, dissipation inequality                 | 82 |
| 3. Homogenization of the equations for materials<br>with evolving microstructure ..... | 85 |
| References .....   | 87 |

**Aspects of Homogenization Techniques and Multigrid  
Solving**

|   |    |
|---|----|
| C. G. Bayreuther, C. Miehe and J. Schröder .....                | 88 |
| 1. Introduction.....  | 88 |
| 2. The basic multigrid concept .....                            | 88 |
| 3. A numerical homogenization procedure .....                   | 90 |
| 4. Transfer operators for heterogeneous structures .....        | 91 |
| 4.1 Smoothing adapted transfer operators .....                  | 91 |
| 4.2 Transfer operators associated with unit displacements ..... | 92 |
| 4.3 Algebraical motivated transfer operators .....              | 92 |
| 4.4 Homogenization based transfer operators.....                | 93 |

|  |    |
|--|----|
| 5. Comparative study of model problems . . . . . | 93 |
| 6. Conclusion . . . . .                          | 95 |
| References . . . . .                             | 95 |

### Estimates on the Mixture Function for Multiphase Problems in Elasticity

|   |     |
|---|-----|
| Alexander Mielke . . . . .                                    | 96  |
| 1. Introduction . . . . .                                     | 96  |
| 2. Definition of the mixture function . . . . .               | 97  |
| 3. The $\mathbb{H}$ -measure associated with $\chi$ . . . . . | 99  |
| 4. A lower estimate . . . . .                                 | 100 |
| 5. Upper bounds . . . . .                                     | 101 |
| 6. A special case . . . . .                                   | 102 |
| References . . . . .  | 103 |

### A Two-Scale Micro-Macro-Approach to Anisotropic Finite Plasticity of Polycrystals

|  |     |
|--|-----|
| C. Miehe and J. Schotte . . . . .                                | 104 |
| 1. Introduction . . . . .  | 104 |
| 2. A class of mirco-macro-transitions at large strains . . . . . | 105 |
| 3. A computational model of finite crystal plasticity . . . . .  | 108 |
| 4. Texture evolution in homogeneous compression test . . . . .   | 110 |
| References . . . . .   | 111 |

### Section 3: Solid-Fluid-Interaction

|                               |     |
|-------------------------------|-----|
| Edited by W. Ehlers . . . . . | 113 |
|-------------------------------|-----|

### Boundary Conditions at the Viscous Sliding Interface of Incompressible Porous Deformable Media

|  |     |
|--|-----|
| G.A. Ateshian and X. Wang . . . . .    | 115 |
| 1. Introduction . . . . .              | 115 |
| 2. Formulation . . . . .               | 116 |
| 2.1 Kinematic conditions . . . . .     | 117 |
| 2.2 Interface tractions . . . . .      | 118 |
| 3. Limiting cases . . . . .            | 120 |
| 3.1 Solid-solid interface . . . . .    | 121 |
| 3.2 Fluid-fluid interface . . . . .    | 121 |
| 3.3 Solid-fluid interface . . . . .    | 121 |
| 3.4 Biphasic-fluid interface . . . . . | 121 |
| 3.5 Biphasic-solid interface . . . . . | 121 |
| 3.6 Inviscid fluid phase . . . . .     | 122 |
| 4. Governing equations . . . . .       | 122 |
| 5. Discussion . . . . .                | 123 |
| References . . . . .                   | 123 |

## **Computational Experience from the Solution of Coupled Problems in Ship Dynamics**

|  |     |
|--|-----|
| Frank Ihlenburg .....                                      | 125 |
| 1. Introduction.....                                       | 125 |
| 2. Physical assumptions and governing equations .....      | 125 |
| 3. Numerical method and computational implementation ..... | 127 |
| 4. Computational results .....                             | 127 |
| 4.1 Fluid-structure interaction .....                      | 128 |
| 4.2 Structural model adaptation.....                       | 130 |
| 4.3 Structural mesh refinement.....                        | 132 |
| 5. Conclusions .....                                       | 132 |
| References .....   | 134 |

## **On the Adaptive Computation of Shear Bands in Frictional Geomaterials**

|   |     |
|---|-----|
| Wolfgang Ehlers and Peter Ellsiepen .....           | 135 |
| 1. Introduction.....                                | 135 |
| 2. Governing equations.....                         | 136 |
| 3. Spatial discretization and numerical tools ..... | 138 |
| 4. Numerical example.....                           | 141 |
| References .....                                    | 142 |

## **Intrinsic Viscoelasticity of Porous Materials**

|  |     |
|--|-----|
| Wolfgang Ehlers and Bernd Markert..... | 143 |
| 1. Introduction.....                   | 143 |
| 2. Governing equations.....            | 144 |
| 3. Finite viscoelasticity law .....    | 145 |
| 4. Examples .....                      | 147 |
| 5. Conclusions .....                   | 149 |
| References .....                       | 150 |

## **Numerical Simulation of Fluids Interacting with Moving Rigid Bodies**

|   |     |
|---|-----|
| S. Meynen and M. Schäfer .....                    | 151 |
| 1. Introduction.....                              | 151 |
| 2. Governing equations and solution methods ..... | 152 |
| 2.1 Navier-Stokes equations for moving grids..... | 152 |
| 2.2 Linear rigid body dynamics .....              | 153 |
| 3. Coupling algorithm .....                       | 154 |
| 4. Numerical example.....                         | 155 |
| 5. Conclusions .....                              | 157 |
| References .....                                  | 158 |

## **Partitioned Analysis of Transient Nonlinear Fluid Structure Interaction Problems Including Free Surface Effects**

W.A. Wall, D.P. Mok, J. Schmidt and E. Ramm ..... 159

|   |     |
|---|-----|
| 1. Introduction.....  | 159 |
| 2. CFD - Computational Fluid Dynamics.....                      | 159 |
| 2.1 Arbitrary Lagrangean Eulerian (ALE) formulation .....       | 160 |
| 2.2 Stabilized finite element method .....                      | 160 |
| 2.3 Description of the free surface .....                       | 161 |
| 3. CSD - Computational Structural Dynamics .....                | 161 |
| 4. CMD - Computational Mesh Dynamics .....                      | 162 |
| 5. Partitioned staggered analysis approach.....                 | 162 |
| 5.1 Algorithmic setup .....                                     | 163 |
| 5.2 A robust iterative substructuring scheme.....               | 164 |
| 6. Numerical examples .....                                     | 165 |
| 6.1 Floating vertical cylinder in viscous fluid .....           | 165 |
| 6.2 Cavity with oscillating top plate and flexible bottom ..... | 165 |
| References .....  | 166 |

## **Section 4: Efficient Solvers and Adaptivity**

Edited by O. Steinbach and C. Wieners ..... 167

### **Domain Decomposition Methods in the Design of High Power Electronic Devices**

R. Hoppe, Y. Iliash, and G. Mazurkevitch..... 169

|  |     |
|--|-----|
| 1. Introduction.....   | 169 |
| 2. High power electronic devices and systems .....               | 170 |
| 2.1 Electrothermomechanical couplings in IHV-Modules .....       | 170 |
| 2.2 Minimization of parasitic effects in Converter Modules ..... | 172 |
| 3. The mortar element methods .....                              | 173 |
| 3.1 Mortar methods for Lagrangian finite elements .....          | 173 |
| 3.2 Mortar methods for curl-conforming edge elements .....       | 176 |
| 4. Numerical results .....                                       | 178 |
| References .....   | 181 |

### **Matrix Compression for the Radiation Heat Transfer in Exhaust Pipes**

M. Bebendorf and S. Rjasanow ..... 183

|  |     |
|--|-----|
| 1. Introduction.....                             | 183 |
| 2. Mathematical model .....                      | 184 |
| 3. Approximation of the full dense matrices..... | 187 |
| 4. Adaptive cross approximation .....            | 188 |
| 4.1 Matrix partitioning .....                    | 188 |
| 4.2 Low-rank approximation .....                 | 189 |

|                             |     |
|-----------------------------|-----|
| 5. Numerical examples ..... | 190 |
| References .....            | 191 |

**An Iterative Substructuring Method with Lagrange  
Multipliers for Elasticity Problems Using Approximate  
Neumann Subdomain Solvers**

|   |     |
|---|-----|
| A. Klawonn .....  | 193 |
| 1. Introduction.....  | 193 |
| 2. The FETI method .....  | 194 |
| 3. The new domain decomposition method with approximate subdo-<br>main solves ..... | 196 |
| 4. Numerical results .....  | 198 |
| References .....  | 200 |

**A New a Posteriori Error Estimator in Adaptive Direct  
Boundary Element Methods. The Neumann Problem**

|  |     |
|--|-----|
| H. Schulz and O. Steinbach .....         | 201 |
| 1. Introduction.....                     | 201 |
| 2. An a posteriori error estimator ..... | 203 |
| 3. Implementation .....                  | 205 |
| 4. Numerical example.....                | 207 |
| References .....                         | 208 |

**Efficient Elasto-Plastic Simulation**

|   |     |
|---|-----|
| C. Wieners .....  | 209 |
| 1. Introduction.....  | 209 |
| 2. A general framework for quasi-static plasticity .....      | 210 |
| 3. Return mapping algorithms for incremental plasticity ..... | 211 |
| 4. Standard materials .....                                   | 212 |
| 5. An example with nonlinear hardening .....                  | 213 |
| 6. The computation of the return parameter .....              | 214 |
| 7. A numerical experiment .....                               | 215 |
| 8. Conclusion .....   | 216 |
| References .....  | 216 |

**Section 5: Contact and Fracture**

|                                |     |
|--------------------------------|-----|
| Edited by W. L. Wendland ..... | 217 |
|--------------------------------|-----|

**Sensitivity and Optimal Control in Contact Mechanics**

|   |     |
|---|-----|
| G. Szefer.....  | 219 |
| 1. Introduction.....  | 219 |
| 2. Setting of the optimal control and sensitivity problem ..... | 219 |
| 3. Adjoint system .....   | 225 |

|   |     |
|---|-----|
| 4. Conclusions .....  | 228 |
| References .....  | 228 |
| <br><b>On the Treatment of Contact Problems in Elasto-Plasticity</b>  |     |
| M. Bach, C. Eck and M. Schulz .....   | 229 |
| 1. Introduction.....  | 229 |
| 2. Problem setting.....   | 230 |
| 3. Boundary element method .....  | 234 |
| 4. Numerical example.....   | 236 |
| References .....  | 236 |
| <br><b>On Contact Problems for Linear and Nonlinear Elastic<br/>Plates: Existence of Solutions and Application of Augmented<br/>Lagrangian Method</b> |     |
| W. Bielski, A. Galka, and J.J. Telega .....   | 237 |
| 1. Geometrically linear plates .....  | 237 |
| 1.1 Thin plates .....   | 237 |
| 1.2 Reissner's plate model .....  | 239 |
| 2. Von Kármán plates .....  | 240 |
| 3. Augmented Lagrangians methods for a class of nonconvex problems  | 241 |
| 4. Example .....  | 243 |
| References .....  | 245 |
| <br><b>Longitudinal Wave Propagation in Conical Rods Subject to<br/>Impacts</b>   |     |
| P. Eberhard, B. Hu and W. Schiehlen .....   | 246 |
| 1. Introduction.....  | 246 |
| 2. Symbolical computation for a conical rod .....   | 247 |
| 3. Experimental investigation of longitudinal waves .....   | 250 |
| 4. Conclusions .....  | 252 |
| References .....  | 253 |
| <br><b>A Survey on Dynamic Contact Problems with Coulomb<br/>Friction</b>   |     |
| Ch. Eck and J. Jarušek .....  | 254 |
| 1. Introduction.....  | 254 |
| 2. The dynamic contact problem with Coulomb friction .....  | 254 |
| 3. Frictional contact problems with heat transfer .....   | 257 |
| References .....  | 261 |
| <br><b>Numerical Simulation of Noise Radiation from Rolling Tires</b>   |     |
| L. Gaul, U. Nackenhorst and B. Nolte .....  | 262 |
| 1. Introduction.....  | 262 |

|  |     |
|--|-----|
| 2. The simulation procedure .....                          | 263 |
| 3. Numerical simulation of stationary rolling wheels ..... | 264 |
| 4. Numerical analysis of sound radiation .....             | 265 |
| 5. Example: A simple wheel .....                           | 267 |
| 6. Conclusions .....                                       | 267 |
| References .....   | 269 |

### **Stress Singularities in Composites**

|  |     |
|--|-----|
| A.-M. Sändig .....   | 270 |
| 1. Introduction.....   | 270 |
| 2. Linear examples: Laplacian and Lamé system.....   | 271 |
| 3. Linear elliptic boundary transmission problems in Sobolev spaces<br>with detached asymptotics ..... | 274 |
| 4. Semilinear problems .....   | 275 |
| 5. Continuity and Fréchet-differentiability of the semilinear operator..                               | 276 |
| 6. Asymptotic behaviour of the solution of the semilinear problem....                                  | 276 |
| References .....   | 277 |

Multifield Problems

State of the Art

Sändig, A.-M.; Schiehlen, W.; Wendland, W.L. (Eds.)

2000, XXVI, 278 p., Hardcover

ISBN: 978-3-540-67511-2
