

Contents

1. Basic Notions	1
1.1 Gröbner Bases in the Weyl Algebra	2
1.2 Weight Vectors and Non-term Orders	11
1.3 The Gauss Hypergeometric Equation	16
1.4 Holonomic Systems	28
1.5 Integrals of Products of Linear Forms	40
2. Solving Regular Holonomic Systems	51
2.1 The Gröbner Fan	51
2.2 Semi-Continuity of the Holonomic Rank	62
2.3 Torus Action and Frobenius Ideals	66
2.4 Regular Holonomic Systems	77
2.5 Canonical Series Solutions	88
2.6 Construction of Series Solutions	96
3. Hypergeometric Series	103
3.1 GKZ-Hypergeometric Ideal for Generic Parameters	104
3.2 Standard Pairs and Triangulations	109
3.3 The Hypergeometric Fan	120
3.4 Logarithm-free Hypergeometric Series	127
3.5 Lower Bound for the Holonomic Rank	134
3.6 Unimodular Triangulations	138
4. Rank versus Volume	151
4.1 The Fake Indicial Ideal and an Upper Bound	154
4.2 Hypergeometric Functions from Toric Curves	161
4.3 Koszul Complexes and Cohen-Macaulay Property	167
4.4 Integer Programming and Parametric b -functions	174
4.5 The Exceptional Hyperplane Arrangement	181
4.6 w -flatness	186
5. Integration of D-modules	193
5.1 b -functions for Holonomic D -ideals	193
5.2 Computing Restrictions	199

VIII Contents

5.3 Powers of Polynomials	211
5.4 Hypergeometric Integrals	219
5.5 Computing Integrals	227
5.6 Asymptotic Expansions of Hypergeometric Integrals	235
Appendix	241
References	245
Index	251

Gröbner Deformations of Hypergeometric Differential
Equations

Saito, M.; Sturmfels, B.; Takayama, N.

2000, VIII, 254 p. 5 illus., Hardcover

ISBN: 978-3-540-66065-1
