1	Introduction to Thermodynamic Systems Modelling	7
1.1	Importance of Modelling	7
1.1.1	Definition	7
1.1.2	Importance	7
1.1.3	Levels of Modelling	8
1.1.4	Interest of Bond Graph in Process Engineering	9
1.2	Thermal and Thermodynamics	13
1.2.1	Degrees of Freedom and Liaison Variables in Thermofluids	13
1.3	Heat Flow and Entropy Flow	15
1.3.1	Carnot's Equation	15
1.3.2	The Principles of Thermodynamics	18
1.3.3	Entropy and Disorder	19
1.4	Matter without Movement as Multiport	20
1.4.1	General Views	20
1.4.2	Equations of Multiport C	21
1.4.3	Entropy according to Clausius	23
1.5	Properties of Multiport C	23
1.5.1	Properties and Reciprocities of Maxwell.	23
1.5.2	Calculation of Specific Heat	27
1.6	Friction with Entropy Generation	30
1.6.1	Introduction	30
1.6.2	Types of Friction	30
1.6.3	Thermal Friction	31
1.6.4	Bond Graph Model of a Building	33
1.6.5	Thermal Conduction in True Bond Graphs	34
1.6.6	The Body as Multiport C between two Sources	35
1.7	Static Processes and Carnot Cycle	37
1.8	Process with Moving Matter	39
1.8.1	Matter in Movement	39
1.8.2	Ratio between Conduction and Convection	41
1.9	References	43
2	Modelling of Thermofluids	45
2.1	Conservation of Power in Multiports	45
2.1.1	Multiport R:Reco	45
2.1.2	Multiport C	47

2.1.3	Dissipation of Energy in a Resistance	50
2.1.4	Combined Hydraulic Resistance	52
2.1.5	Patching Formulae in Restrictors	54
2.2	Heat Exchanger	55
2.2.1	The Element Hexa	55
2.2.2	An Element Hexa between two Multiports C	56
2.3	Turbomachines	58
2.3.1	Introduction	58
2.3.2	Element TEFMA	59
2.3.3	Simulation of the Dynamic of a Turbomachine . . .	59
2.4	Hydropneumatic Accumulator	61
2.4.1	Simulation of Hydropneumatic Suspension	62
2.5	References	64
3	Modelling of Chemical Systems and Phase Change	65
3.1	Potential or Chemical Tension	65
3.1.1	Introduction	65
3.1.2	Chemical Thermal and Hydraulic Equilibrium	67
3.1.3	Properties of Chemical Tension	68
3.1.4	Constitutive Equations for Gas and Liquids	70
3.2	Coupled Powers and Entropy Stripping	71
3.3	Chemical RC Circuit and Phase Change	76
3.3.1	Analogy between Electric and Chemical Circuit . . .	76
3.3.2	Evaporation of Water in a Boiler	79
3.3.3	Condensation of Vapour	87
3.4	Osmosis	90
3.4.1	Principles and Bond Graph of Osmosis	90
3.4.2	Influence of Pressure and Temperature on Chemical Tension	91
3.4.3	Osmotic Pressure and Boundary Layer	92
3.4.4	Estimation of Thickness of Boundary Layer	94
3.4.5	Estimation of Chemical Resistance	95
3.4.6	Inverse Osmosis	96
3.5	Chemical Reactions	97
3.5.1	Bond Graph Model of a Chemical Reaction	97
3.5.2	Chemical Resistance	102
3.5.3	Chemical Capacity	102
3.5.4	Thermodynamic Model of Chemical Reactions	103
3.5.5	Parallel and Competitive Chemical Reactions	104
3.6	Static Electrochemical Reactions	106
3.6.1	Electrochemical Coupling	106
3.6.2	Bond graph Model of Electrolysis	107
3.6.3	Reversible and Irreversible Thermodynamics and Dis- sipation	110
3.7	References	111

4	Bond Graph and Process Engineering	113
4.1	Overview	113
4.1.1	Introduction	113
4.1.2	Methodology	114
4.2	Steps in Writing a Bond Graph Model	115
4.2.1	Word Bond Graph	115
4.2.2	Bond Graph Model	115
4.2.3	Assignment of the Causalities	116
4.2.4	Writing Mathematical Equation	117
4.3	Selection of Liaison Variables in Process Engineering Systems	119
4.3.1	Introduction	119
4.3.2	Liaison Variables for Thermodynamic Systems . . .	119
4.3.3	Choice of Liaison Variables for Chemical Systems . .	126
4.4	References	127
5	Industrial Application of Bond Graph Modelling	129
5.1	Filling of Pneumatic Automobiles	129
5.1.1	Bond Graph Model	129
5.1.2	Simulation by TUTSIM Program	130
5.2	Cooling of Diesel Fuel	132
5.2.1	Bond Graph Model	132
5.2.2	Simulation Results	135
5.3	Ventilation of Buildings	136
5.3.1	Bond Graph Model	136
5.3.2	Simulation by Twentesim	140
5.4	References	142
5.5	Installation of Steam Generator	142
5.5.1	Description of the Process	142
5.5.2	Word Bond Graph of the Global Installation	144
5.5.3	Bond Graph Model of the Electrical Heater	145
5.5.4	Modelling of Feed Water Supply System	147
5.5.5	Bond Graph Model of the Boiler	150
5.5.6	Bond Graph Model of the Steam Expansion System	153
5.5.7	Bond Graph Model of the Condenser	156
5.5.8	Bond Graph Model of the Receiver	163
5.6	References	164
A	Elements of Bond Graph Modelling	165
A.1	Definition	165
A.2	Bond Graph Elements with one Port	166
A.2.1	Representation	166
A.2.2	Used Variables in Bond Graph Modelling	166
A.2.3	Passive Elements	167
A.2.4	Active Elements	169
A.2.5	Junctions	169

A.3	Bond Graph Elements with two Ports	170
A.3.1	Transformer TF	170
A.3.2	Gyrator GY	170
A.3.3	Carrousel of Thoma	171
A.3.4	Information Bonds	171
A.4	Multiports Elements or C, I and R Fields	172
A.4.1	Mixed Multiport IC	175
A.4.2	Multiport R	175
A.4.3	Multiport RS	176
