

# Contents

<b>1</b>	<b>Theory of Dynamic Systems</b> .....
1.1	Definitions and Overview of Systems Modelling .....
1.2	General Classification of Dynamical System Variables .....
1.2.1	Classification in Terms of Spatial Relationships.....
1.2.2	Classification in Terms of Local Energy State.....
<b>2</b>	<b>System Representation by Diagrams (Model System)</b> .....
2.1	Block-diagram and Signal-flow-diagram Representation.....
2.1.1	Transfer Function Block Diagram.....
2.1.2	Control System Structure.....
2.1.3	Control System Design. <i>Fundamental Aspects</i> .....
2.1.4	Signal Flow Graphs. <i>Reduction of the Diagram</i> .....
2.2	Two-port-diagram Representation .....
2.2.1	Generic Two-port Network .....
2.2.2	Connection of Two Ports.....
2.2.3	Mechanical Two Ports .....
2.2.4	Fundamental Mechanical Elements and Connections .....
2.2.5	Supplementary Mechanical Elements. <i>Couplers and Sources</i> .....
2.2.6	Connections with Block Diagrams. <i>Transfer Function Block Diagrams</i> .....
2.2.7	Analysis of Complex System Structures. <i>Fluid System</i> .....
2.3	Network-diagram Representation (Circuit Diagram) .....
2.3.1	Direct Representation of Simple Systems by Networks.....
2.3.2	Fundamental and Supplementary Mechanical Elements.....
2.3.3	Construction of Mechanical Network Diagram. <i>Mechanical Circuit</i> .....
2.3.4	Derivation of Mechanical Network Equations. <i>Equation of Motion</i> .....
2.3.5	Connections with Signal-flow Diagrams. <i>Oriented Linear Graphs</i> .....
2.4	Combined-flow-diagram Representation.....
2.4.1	Symbolic Measurement of Dynamical System Variables .....
2.4.2	Symbolic Regulation of Supplementary Elements. <i>Couplers and Controlled Sources</i> .....
2.4.3	Connections between Network and Block Diagrams. <i>Mixed Domain System Structures</i> .....
2.5	Bond-graph Representation (Multiports).....
2.5.1	Classification of Multiports .....
2.5.2	Conventions for Interconnected Multiports. <i>Augmented Bond Graphs</i> .....
2.5.3	Fundamental Interconnective Relationships. <i>Generalized Kirchhoff's Laws</i> .....
2.5.4	Construction of Mechanical Bond Graph. <i>Mechanical Multiport</i>

## 1 Überschrift 1. Ordnung

---

- 2.6 Comparison of Diagram Representations (References to Applications) .....
- 2.6.1 Schematic Diagrams. *Visually Descriptive Diagrams* .....
- 2.6.2 Systematic Diagrams. *Interconnection Diagrams* .....

## 3 System Representation by Equations (Mathematical Model) .....

- 3.1 Representation of Mechanical Systems by Differential Equations of Motion (Classical Method) .....
- 3.1.1 System Specifications by Normalization of the Differential Equation .....
- 3.1.2 Free and Forced Response of Damped Second-order Systems .....
- 3.1.3 Forced Response of a Single Degree-of-freedom System to Complex Excitation. *Phasor-response Analysis* .....
- 3.2 Representation of Mechanical Systems by Integral-transformed Models (Transform Methods) .....
- 3.2.1 Periodic Vibration. *Fourier Series Analysis* .....
- 3.2.2 Non-periodic Vibration. *The Fourier Integral* .....
- 3.2.3 Fourier Transform Method. *Frequency-response Analysis* .....
- 3.2.4 System Response to Transient Excitation. *Pulse-type Functions* .....
- 3.2.5 Random Vibration. *Data Processing* .....
- 3.2.6 System Response to Random Excitation. *White Noise* .....
- 3.2.7 Transient Vibration. *The Laplace Integral* .....
- 3.2.8 Laplace Transform Method. *Transfer-function Analysis* .....
- 3.2.9 System Response to Transient Excitation. *Step-type Functions* .....
- 3.2.10 The Graphical Interpretation of the Transfer Function. *Conformal Mapping* .....
- 3.2.11 The Graphical Interpretation of the Frequency-response Function. *Frequency Response Plots* .....
- 3.3 Comparison of Fourier and Laplace Transform Methods (References to Applications) .....
- 3.3.1 Fourier Transform Method. *Advantages and Disadvantages* .....
- 3.3.2 Laplace Transform Method. *Advantages and Disadvantages* .....

## 4 Transform Analysis Methods of Vibrating Systems (Frequency-response Characteristics) .....

- 4.1 Formulation of Dynamical Equations (Equations of Motion) .....
- 4.1.1 Analytical Dynamics. *Mathematical System by Analytical Methods* .....
- 4.1.2 Synthetical Dynamics. *Mathematical System by Synthetical Methods* .....
- 4.2 Frequency-response Characteristics (Concepts of Mobility and Dynamic Compliance) .....
- 4.2.1 Equivalent Definitions of Frequency-response Function .....
- 4.2.2 Dynamic Characteristics of Mechanical Elements. *Component Mobilities and Dynamic Compliances* .....

## 2 Überschrift 1. Ordnung

---

- 4.2.3 Dynamic Characteristics of Composite Systems. *Overall Mobility and Dynamic Compliance* .....
- 4.2.4 General Transform Analysis Principles. *Mechanical Circuit Theorems* .....
- 4.2.5 Graphical Methods to Mechanical System Design. *Selecting Vibratory Specifications by Polar Diagrams* .....
- 4.2.6 Some Exercises in Transform Analysis Methods. *Applying Dynamic Compliance Techniques* .....

## 5 The Flow of Power and Energy in Systems (Energy Transactions)....

- 5.1 Power Transmission through Linear Two Ports (Generalized Transport Process) .....
- 5.1.1 The Transmission Problem of Two-port Networks. *Unrestricted Terminal Conditions* .....
- 5.1.2 The Transmission Problem related to Complex Power. *Generalized Quadratic Forms* .....
- 5.1.3 The Power Transmission Factor. *Generalized Transmission Ratio* .....
- 5.2 Power Transmission through Mechanical Networks (Generalized Impedance) .....
- 5.2.1 The Transmission Problem of One-port Networks. *Functional Relationships* .....
- 5.2.2 The Transmission Problem related to Complex Power. *Phasor Power* .....
- 5.2.3 Connections with Frequency-response Characteristics. *Combining Dynamic Compliance and Phasor Power Concepts* .....

## Appendix A

- Response Time Histories  
(Force- and Displacement-time Histories) .....

## Appendix B

- Frequency Response Plots  
(Normalized Dynamic Compliance and related Characteristics) .....

## Appendix C

- Frequency Response Plots of Power Flow (Normalized Complex Power) .....

## References .....
