

# Contents

<b>1. The Role of Molecular Beams in the 20th Century</b>	<b>1</b>
1.1 Historical Development	5
1.1.1 The Work of the School of Otto Stern	5
1.1.2 Molecular Beam Magnetic Resonance	6
1.1.3 Early Work with Fast Molecular Beams	7
1.1.4 Developments in the Second Half of the 20th Century	8
1.2 Main Applications of Molecular Beams	9
1.2.1 Elastic Scattering	10
1.2.2 Inelastic Scattering	11
1.2.3 Reactive Scattering	14
1.2.4 Investigation of Gas–Surface Interactions	14
1.2.5 Determination of Electrical Polarizabilities	16
1.2.6 Cluster Research	17
1.2.7 Slow Atom Beams and Cold Atoms	19
1.3 Thermal Energy Molecular Beam Applications in other Fields	20
1.3.1 Photon Experiments	20
1.3.2 Low Energy Electron and Ion Scattering	22
1.3.3 Plasma Diagnostics	22
1.3.4 Cluster and Nozzle Beams as Targets in High Energy Physics	22
1.3.5 Molecular Beam Epitaxy and Lithography	22
1.4 Fast Beam Applications	23
1.4.1 Plasma Diagnostics with Fast Beams	24
1.4.2 Ionization of Rydberg Atoms in Electric and Magnetic Fields	24
1.4.3 Merged Beams	24
1.5 Examples of Molecular Beam Machines	25
1.5.1 A Universal Scattering Apparatus	26
1.5.2 Requirements for a Scattering Experiment	26
1.5.3 Technical Realization	28
1.5.4 A Molecular Beam Apparatus for Surface Investigations.	30
 <b>2. Fundamentals of Kinetic Gas Theory</b>	 <b>35</b>
2.1 Ideal Gases in Thermodynamic Equilibrium	35
2.1.1 The Maxwellian Velocity Distribution	36

2.1.2	Number of Wall Collisions, Pressure, and Equation of State . . . . .	38
2.1.3	Mean Free Path, Collision Rates, and Collision Frequencies . . . . .	40
2.1.4	Rotational State Distribution of Molecules . . . . .	46
2.1.5	Vibrational State Distribution of Molecules . . . . .	49
2.1.6	Total Distribution and Partition Function . . . . .	50
2.1.7	Fraction of Dimers and Degree of Dissociation at Equilibrium . . .	51
2.2	Quantum Statistics . . . . .	54
2.2.1	Bose Statistics . . . . .	55
2.2.2	Bose–Einstein Condensation . . . . .	58
2.3	Molecular Flow Through an Ideal Aperture . . . . .	60
2.3.1	Particle Flux . . . . .	61
2.3.2	Particle Number Density . . . . .	63
2.4	Molecular Flow Through Channels . . . . .	66
2.4.1	Channels of Circular Cross Section . . . . .	66
2.4.2	Channels of Noncircular Cross Section . . . . .	75
2.4.3	Multichannel Arrays . . . . .	76
<b>3.</b>	<b>Fundamental Principles of Gas Dynamics . . . . .</b>	<b>77</b>
3.1	Some Fundamentals of Thermodynamics . . . . .	78
3.2	Governing Equations of Steady Flow . . . . .	80
3.3	One-Dimensional Flow . . . . .	81
3.3.1	Speed of Sound and Mach Number . . . . .	81
3.3.2	Flow Through Passages with Changing Cross-Sectional Area . . .	83
3.3.3	Flow Through a Converging–Diverging (Laval) Nozzle . . . . .	85
3.3.4	Flow Through Converging Nozzles . . . . .	89
3.3.5	Unsteady Flow, Normal Shock Waves . . . . .	90
3.4	Two-Dimensional Flow . . . . .	93
3.4.1	Oblique Shock Waves . . . . .	93
3.4.2	Planar Supersonic Flow over a Symmetrical Wedge . . . . .	96
3.4.3	Axisymmetric Supersonic Flow over a Cone . . . . .	97
3.4.4	Prandtl–Meyer Expansion . . . . .	99
3.4.5	Mach Waves . . . . .	102
3.4.6	Numerical Techniques and Results . . . . .	103
3.5	Free-Jet Expansion . . . . .	105
3.6	The Transition to Nonequilibrium Conditions . . . . .	111
3.6.1	Collision Cross Sections . . . . .	111
3.6.2	Collision Rates . . . . .	113
3.6.3	Terminal Temperature and Speed Ratio . . . . .	117
3.6.4	Velocity Distribution in Nozzle Beams . . . . .	120
3.6.5	Intensity of Nozzle Beams . . . . .	125
3.7	Internal Energy Relaxation . . . . .	129
3.7.1	Rotational Energy Relaxation . . . . .	129
3.8	Binary Gas Mixtures . . . . .	136
3.8.1	Velocity and Temperature Slip . . . . .	136

3.8.2 Velocity Slip due to Molecular Orientation . . . . .	138
3.8.3 Gas Separation . . . . .	138
3.9 Condensation and Cluster Formation . . . . .	139
3.9.1 Survey and Concepts of Models . . . . .	140
3.9.2 Scaling Laws for Cluster Formation . . . . .	143
3.9.3 Cluster Temperature . . . . .	146
<b>4. Thermal Energy Molecular Beam Sources . . . . .</b>	<b>147</b>
4.1 Experimental Requirements . . . . .	149
4.1.1 Production of Nozzles, Apertures, and Skimmers . . . . .	149
4.1.2 Pumping Requirements . . . . .	154
4.1.3 Beam Guidance and Beam Absorption . . . . .	158
4.2 Gas Sources (4–600 K) . . . . .	160
4.3 Ovens for Gases and Solids . . . . .	162
4.3.1 Temperature Range up to 1200 K . . . . .	162
4.3.2 Temperatures up to 2800 K . . . . .	165
4.3.3 Sources for Highly Refractory Materials . . . . .	167
4.4 Laser Ablation . . . . .	169
4.5 Sputtering Sources . . . . .	171
4.6 Recirculating Sources and Sources for Special Applications . . . . .	171
4.6.1 Sources with Internal Shutter . . . . .	174
4.6.2 Internal Collimation . . . . .	175
4.7 Sources for Beams of Radicals . . . . .	176
4.7.1 Pyrolysis . . . . .	177
4.7.2 Gas Discharges . . . . .	181
4.7.3 Hollow-Anode Discharges . . . . .	181
4.7.4 Radiofrequency and Microwave Discharges . . . . .	182
4.7.5 Corona Discharges . . . . .	186
4.7.6 Flow Tube Sources . . . . .	187
4.7.7 Photolysis . . . . .	189
4.8 Production of Metastable Particles . . . . .	190
4.8.1 Electron Impact Excitation . . . . .	190
4.8.2 Gas Discharges . . . . .	192
4.8.3 Flow Tubes . . . . .	196
4.8.4 Optical Excitation . . . . .	197
4.9 Rydberg Atoms . . . . .	198
4.9.1 Electron Impact Excitation . . . . .	200
4.9.2 Optical Excitation . . . . .	200
4.10 Pulsed Beam Sources . . . . .	201
4.10.1 Comparison between Pulsed and Continuous Beam Sources . . . . .	202
4.10.2 Production of Pulsed Beams . . . . .	204
4.10.3 Properties of Pulsed Beams . . . . .	211
4.11 Sources of Slow and Cold Atoms . . . . .	213

<b>5. Detection Methods</b>	215
5.1 Accumulation Detectors	216
5.1.1 Condensation Targets	216
5.1.2 Microbalances	217
5.1.3 Chemical Targets	219
5.1.4 Radioactivity Detection	219
5.1.5 Semiconducting Detectors	220
5.2 Momentum Detectors	221
5.3 Special Vacuum Gauges	222
5.3.1 Ionization Gauges	223
5.3.2 Thermal Conductivity Gauges (Stern–Pirani Detector)	223
5.3.3 Diaphragm Gauges	224
5.3.4 Space Charge and Electron Impact Excitation Detectors	224
5.4 Surface Ionization (Langmuir–Taylor Detector)	225
5.4.1 Positive Ionization of Atoms	227
5.4.2 Negative Ionization of Atoms	228
5.4.3 Ionization of Molecules	228
5.4.4 Chemical Surface Ionization	230
5.4.5 Practical Design and Operation	230
5.4.6 Response Time of Surface Ionization	232
5.5 Field Ionization	233
5.5.1 Ground-State Particles	233
5.5.2 Rydberg Atoms	234
5.6 Universal Molecular Beam Detector	235
5.6.1 Detection Limits	236
5.6.2 Electron Impact Ion Sources	237
5.6.3 Mass Spectrometers	240
5.6.4 Ion Detection	256
5.6.5 Detection of Cluster Ions by Secondary Electron Emission	262
5.6.6 Examples of Universal Beam Detectors	265
5.7 Thermal Detectors	269
5.7.1 Time Constant and Responsivity of Semiconductor Bolometers	271
5.7.2 Noise Sources and Detection Limits	274
5.7.3 Cryogenic Bolometers	277
5.7.4 Application in Optothermal Spectroscopy	278
5.7.5 Superconducting Bolometers	279
5.7.6 Pyroelectric Detectors	279
5.8 Detection of Metastable Particles	281
5.8.1 Electron Emission from Surfaces	281
5.8.2 Gas-Phase Penning Ionization	283
5.8.3 Detection by Radiative Decay	283
5.8.4 Detection by Optical Methods	284

5.9 Spectroscopic Detection Methods . . . . .	284
5.9.1 Conventional Absorption Spectroscopy . . . . .	285
5.9.2 Laser-Induced Fluorescence . . . . .	287
5.9.3 Photoionization . . . . .	295

Atom, Molecule, and Cluster Beams I

Basic Theory, Production and Detection of Thermal  
Energy Beams

Pauly, H.

2000, XVI, 344 p., Hardcover

ISBN: 978-3-540-66945-6
