

Contents

1. Introduction	1
1.1 Some Definitions	1
1.2 A Brief Reference on Wing-in-Ground-Effect Craft	1
1.3 Asymptotic and Numerical Methods	
in the Aerodynamics of the Wings-in-Ground Effect	4
1.3.1 On the Mathematical Modelling of the Aerodynamics	
of a Lifting System in the Ground Effect	4
1.3.2 Asymptotics for Ground-Effect Lifting Flow Problems	7
1.3.3 Numerics: Euler Codes for Steady Flows	17
1.3.4 Numerics: Euler Codes for Unsteady Flows	19
1.3.5 Numerics: Viscous Flows, Navier–Stokes Solvers	20
2. Problem Formulation for the Flow Past a Lifting Surface	23
in Proximity to a Solid Boundary	23
2.1 Formulation of the Three-Dimensional	
Unsteady Flow Problem	23
2.2 Flow Below the Lifting System and Its Wake (Channel Flow)	25
2.3 Flow Above the Lifting System and Its Wake	28
2.4 Flows in the Vicinity of Edges	29
2.5 Matching of Flow Descriptions in Different Regions	36
2.6 A Uniformly Valid Flow Description	
and Aerodynamic Coefficients	43
2.7 A Limiting Mathematical Model	
of the Extreme Ground Effect	45
3. The Linear Theory of a Lifting System	47
Moving Close to the Ground	47
3.1 Features of a Linearized Formulation and an Algorithm	
of the Solution	47
3.2 Two-Dimensional Steady Flow Past a Slightly Curved Foil	51
3.3 A Wing of Small Aspect Ratio in a Steady Linearized Flow	58
3.4 Steady Flow Past a Wing of Arbitrary Aspect Ratio	63

3.5	Harmonic Oscillations of a Thin Foil in a Two-Dimensional Flow	73
3.6	Three-Dimensional Unsteady Linearized Lifting Flows	79
4.	Nonlinear Flow Problems for a Lifting System in the Extreme Ground Effect	85
4.1	A Curved Thick Foil in a Two-Dimensional Ground Effect . . .	85
4.2	A One-Dimensional Flow Model for a Flying Wing with Endplates	95
4.3	Steady-State Solutions for Flow Past a Wing with Endplates .	101
4.4	Unsteady Flow Solutions for a Wing with Endplates	112
4.4.1	A Nonlinear Unsteady Solution for Small Gaps Under Endplates	112
4.4.2	Unsteady Perturbation of a Steady Flow	114
5.	Compressible Flow Past a Wing in the Extreme Ground Effect	121
5.1	Channel Flow in a Compressible Fluid	121
5.2	Steady Linearized Compressible Flow Past a Wing of Finite Span	124
5.3	Compressible Linearized Unsteady Flow Past a Wing of Finite Span	127
5.4	Nonlinear Steady Compressible Flow Problem for a Foil	133
6.	The Influence of Endplates, Flaps, and Slots	137
6.1	An Estimate of the Influence of Endplates	137
6.2	A Lifting System with a Jet Flap in the Extreme Ground Effect	146
6.3	Nonlinear Steady Flow Problem for a Foil with a Jet Flap . .	155
6.4	Steady Flow Past a Jet-Flapped Wing of Finite Span	158
6.5	A Wing with a Rotating Flap	166
6.6	Slotted Wings in the Ground Effect	171
7.	The Aerodynamics of a Lifting System Near Curved Ground	183
7.1	The Influence of Waves on the Aerodynamics of a Lifting Surface	183
7.2	An Estimate of the Acceleration of a Lifting Surface in Flight over a Wavy Wall	200
7.3	The Aerodynamic Response of a Lifting System to Aperiodic Perturbations	205
	Appendix: The Motion of a Wing Over a Wavy Wall at an Arbitrary Course Angle: Derivation of the Unsteady Lift and the Moment Coefficients	214

8. Schematized Flow Models	
for a Power-Augmented Lifting System	221
8.1 Local Flow Problems for Analysis of PAR Mode	223
8.1.1 Reentrant Jet Flow Near the Leading Edge	224
8.1.2 Reentrant Jet Flow Near the Leading Edge	
with a Deflected Tip	227
8.1.3 Local Separated Flow Past a Flap (Endplate)	229
8.2 Unseparated Flows Near Leading and Trailing Edges	231
8.2.1 Unseparated Coanda Flow Past a Leading Edge	231
8.2.2 Coanda Flow of Finite Width	
Past a Deflected Leading Edge	234
8.2.3 The Model of Flow Past a Leading Edge	
with a Winglet	237
8.2.4 Unseparated Flow Near a Trailing Edge with a Flap	239
8.2.5 Flow of Infinite Width Past a Trailing Edge	
with a Flap	241
8.3 Envelopes of the Efficiency of Power Augmentation	
for a Scheme with a Reentrant Jet	244
8.3.1 Estimate of the Efficiency and the Thrust Recovery	
of PAR Based on a Reentrant Jet Scheme	245
8.3.2 Margins of Efficiency of PAR Based	
on a Reentrant Jet Scheme	250
8.4 A Discussion of a Mathematical Model of PAR	
with the Coanda Effect	257
9. The Aerodynamic Efficiency of a Wing	
in the Extreme Ground Effect	263
9.1 Optimal Wing-in-Ground Effect	263
9.2 The Lift-to-Drag Ratio of a Wing in the Ground Effect	269
10. Integral Formulations for Lifting Surfaces	
in the Extreme Ground Effect	281
10.1 A Slightly Curved Foil in a Two-Dimensional Ground Effect	281
10.2 A Foil with a Jet Flap in Proximity to the Ground	283
10.3 A Wing of Small Aspect Ratio	284
10.4 Lifting Line(s) in Close Proximity to the Ground	285
10.4.1 A Single Lifting Line in the Extreme Ground Effect	285
10.4.2 A Comment on “Span-Dominated”	
and “Chord-Dominated” Extreme Ground Effects	288
10.4.3 A Tandem of Lifting Lines	
in the Extreme Ground Effect	289
10.5 Quadruplication of the Integral Equation for a Wing	
of Finite Span	292

11. Equations and the Stability of Motion	
of a Lifting System in the Extreme Ground Effect	295
11.1 Linear Equations of Longitudinal Dynamics	296
11.1.1 The Quartic Characteristic Equation	297
11.1.2 The Quintic Characteristic Equation	299
11.2 The Equations of Motion in the Extreme Ground Effect	300
11.2.1 Order Estimates and Assumptions	300
11.2.2 Asymptotic Form of the Equations of Motion	
for $h \rightarrow 0$	301
11.3 Static Stability and “Binding” Near the Ground	302
11.3.1 A Single Wing in the Extreme Ground Effect	306
11.3.2 A Tandem in the Two-Dimensional	
Extreme Ground Effect	311
11.3.3 The Degree of Binding of the Vehicle to the Ground	315
Appendix: Formulas for the Coefficients $B_i (i = 1 \dots 5)$	318
12. Simple Mathematical Models of Elastic	
and Flexible Wings in the Extreme Ground Effect	319
12.1 Evaluation of the Speed of Flutter of a Foil	
Close to the Ground	320
12.2 An Aeroelastic Wing in the Extreme Ground Effect	323
12.3 A Flexible Wing – a Simple Theory of a PARAWIG	328
Bibliography	337
Index	349

Aerodynamics of a Lifting System in Extreme Ground
Effect

Rozhdestvensky, K.V.

2000, X, 352 p., Hardcover

ISBN: 978-3-540-66277-8
