

Contents

1. Introduction	1
2. Historical Note	9
3. Modern Experimental Methods and Results	17
3.1 Surface Forces Apparatus	19
3.2 Friction Force Microscopy	26
3.3 Quartz-Crystal Microbalance	31
4. Surface Topography and Surface Contaminants	37
5. Area of Real Contact: Elastic and Plastic Deformations	45
5.1 Microscale Junctions	45
5.2 Nanoscale Junctions	54
5.3 Area of Real Contact for Polymers	77
6. Sliding on Clean (Dry) Surfaces	93
7. Sliding on Lubricated Surfaces	101
7.1 Hydrodynamic Lubrication	102
7.2 Fluid Rheology	110
7.3 Elastohydrodynamics	119
7.4 On the Thickness of Lubrication Films	120
7.5 Wetting and Capillarity	134
7.6 Introduction to Boundary Lubrication	148
Appendix: Elastohydrodynamics	162
8. Sliding of Adsorbate Layers	171
8.1 Brownian Motion Model	172
8.2 Electronic and Phononic Friction	175
8.3 Sliding Friction in the Low-Density Limit	198
8.3.1 Analytical Results for a 1D-Model	198
8.3.2 A Case Study: Chaotic Motion for a 3D-Model	205
8.4 Linear Sliding Friction	208

8.5	A Case Study: Xe on Silver	215
8.6	Applications	228
8.6.1	Boundary Conditions in Hydrodynamics	228
8.6.2	The Layering Transition	236
8.6.3	Spreading of Wetting Liquid Drops	239
8.7	Two-Dimensional Fluids*	243
8.7.1	2D Hydrodynamics	243
8.7.2	Relation Between Sliding Friction and Diffusion	245
8.8	Solid-Fluid Heat Transfer	248
8.9	Non-linear Sliding Friction	254
8.9.1	Dynamical Phase Transitions in Adsorbate Layers: Lennard-Jones Model	255
8.9.2	Dynamical Phase Transitions in Adsorbate Layers: Frenkel-Kontorova Model	275
8.10	Role of Defects at High Sliding Velocity and for Small Amplitude Vibrations*	278
8.10.1	Model	278
8.10.2	High Sliding Velocities	280
8.10.3	Small Amplitude Vibrations	284
8.11	Friction and Superconductivity: a Puzzle*	286
8.12	Layering Transition: Nucleation and Growth	297
9.	Boundary Lubrication	313
9.1	Relation Between Stress σ and Sliding Velocity v	314
9.2	Inertia and Elasticity: “Starting” and “Stopping”	319
9.3	Computer Simulations of Boundary Lubrication	322
9.4	Origin of Stick-Slip Motion and of the Critical Velocity v_c ..	324
9.5	Comparison with Experiments and Discussion	329
10.	Elastic Interactions and Instability Transitions	335
10.1	Elastic Instability Transition	335
10.2	Elastic Coherence Length	341
10.3	Sliding of Islands, Big Molecules, and Atoms	345
10.4	Sliding Friction: Contribution from Defects*	354
11.	Stress Domains, Relaxation, and Creep	363
11.1	The Model	364
11.2	Critical Sliding State at Zero Temperature	367
11.3	Relaxation and Creep at Finite Temperature	370
11.4	Time-Dependent Plastic Deformation in Solids	382
12.	Lubricated Friction Dynamics	395
12.1	Small Corrugation: Shear-Melting and Freezing	396
12.2	Large Corrugation: Interdiffusion and Slip at Interface	405

13. Dry Friction Dynamics	415
13.1 A Case Study: Creep and Inertia Motion	416
13.2 Memory Effects: Time Dependence of Contact Area	418
13.3 Theory	421
13.4 Non-linear Analysis and Comparison with Experiments	430
14. Novel Sliding Systems	435
14.1 Dynamics of Earthquakes	435
14.2 Sliding on Ice and Snow	439
14.3 Lubrication of Human and Animal Joints	445
14.4 Sliding of Flux-Line Systems and Charge Density Waves ...	447
14.4.1 Flux-Line Systems	447
14.4.2 Charge Density Waves	462
14.5 Frictional Coulomb Drag Between Two Closely Spaced Solids	465
14.6 Muscle Contraction*	470
14.7 Internal Friction and Plastic Stick-Slip Instabilities in Solids	480
14.8 Rolling Resistance	486
14.9 Friction Dynamics for Granular Materials	492
15. Outlook	497
References	499
Subject Index	513

Sliding Friction

Physical Principles and Applications

Persson, B.

2000, XI, 516 p., Hardcover

ISBN: 978-3-540-67192-3
