

ACKNOWLEDGMENTS

This book is based on my PhD dissertation (Landau 1999a), completed at MIT on August 1999. Few places can offer intellectual stimulation of the quality and intensity that MIT does, as a matter of daily routine. It is only at MIT that I learned, first hand, that relentless criticism is the best service one can give to, and receive from, one's peers and colleagues; it is only at MIT that I first felt the power of ideas, triumphant or fallen, as a constant presence in my life. That experience was delivered to me by wonderful people - teachers, colleagues, students - to whom I am very grateful.

Meetings with Noam Chomsky were always stimulating and thought-provoking, and I have never left them short of new ideas to think about. Noam's peculiar combination of skepticism and conviction has often made me rethink my most fundamental assumptions. Chapter 4 of this book grew out of a casual remark Noam made to me; his direct and indirect influence is visible in innumerable other places. I learned a lot about methodology and reasoning in linguistics from Alec Marantz. Alec is also a well-known skeptic, and conversations with him frequently led me to consider broader issues that arose from my work. From David Pesetsky I learned to be "syntactically innovative" and always look for unexpected links between seemingly disparate ideas. David's own work on infinitives has also inspired large parts of this book, especially chapter 2. My fierce arguments with Sabine Iatridou have ultimately sharpened many ideas that were too fuzzy in my head; Sabine's meticulous feedback on my sloppy semantics has greatly improved chapters 4 and 5 of this book. Finally, Irene Heim contributed important comments on chapters 2 and 4.

I am indebted to Hagit Borer, for generous and engaging discussions, both in person and over e-mail, on many issues investigated in this book. Hagit's own work on control inspired the central idea in chapter 2 of this book; her incisive comments greatly improved chapter 3. I would also like to thank the following scholars for helpful meetings and discussions: Howard Lasnik, Esther Torrego, Alan Munn, Danny Fox, Martha McGinnis, Miriam Engelhardt, Maya Arad, Andres Holmberg, Rajesh Bhatt and David Embick. Special thanks to Susi Wurmbrand for bearing with my endless questions on control and restructuring.

Discussions with my fellow students at MIT have taught me much about linguistics. Many of those students were not only good friends, but also great informants on their native tongues, and in general, fun to talk with. For all this and more, thanks to: Karlos Arregui-Urbina, Sveva Besana, Marie Claude Boivin, Ben Bruening, Marie-Hélène Côté, Paul Elbourne, Elissa Flagg, Martin Hackl, Michela

Ippolito, Yoonjung Kang, Meltem Kelepir, Connie Krause, Vivian Lin, Jon Nissenbaum, Isabel Oltra-Massuet, Liina Pykkänen, Andrea Rackowsky, Jay Rifkin, Philippe Schlenker and Luciana Storto.

The basic ideas of chapter 2 were presented at the 23rd GLOW Colloquium. An earlier version of chapter 3 was presented at NELS 29, and a fuller version is to be published in *Natural Language and Linguistic Theory*. Parts of chapter 4 were presented at WCCFL 18, and later published as Landau (1999b). I thank the audiences and reviewers in all those forums for helpful comments and suggestions. Finally, two anonymous SNLT reviewers contributed many insightful comments on the final draft of this book.

During the work on this book I was supported by an NSF Graduate Fellowship, an MIT Graduate Fellowship and the Kreitman Postdoctoral Fellowship at Ben Gurion University.

Elements of Control

Structure and Meaning in Infinitival Constructions

Landau, I.
