<b>1 Introduction to Nerve Cells and Nervous Systems .....</b>	<b>1</b>
The Nervous System and Control .....	1
The Nervous System and Communication .....	2
Nerve Cells .....	2
The Generalised Neuron .....	3
The Anatomy of Neurons .....	6
The Neuroglia .....	9
The General Plan of Nervous Systems .....	10
Regulation of the External Environment of Neurons .....	12
Summary .....	14
<b>2 The Cell Membrane: Ionic Permeability and Electrotonic Properties .....</b>	<b>15</b>
The Structure of Cell Membranes .....	15
Non-gated Channels and the Resting Membrane Potential .....	16
Resting Potential of an Ideal Cell .....	17
Electrotonic Properties of Nerve Cells .....	22
Summary .....	25
<b>3 The Action Potential and the Nerve Impulse .....</b>	<b>27</b>
Electrically Excitable Cells .....	27
Ionic Basis of Action Potentials in Nerve Fibres .....	27
Voltage-Clamp Experiments .....	30
The Initial Inward Current Is Due To Movement of $\text{Na}^+$ .....	32
The Later Outward Current Is Due To Movement of $\text{K}^+$ .....	32
The Inward and Outward Currents Can Be Separated by Drugs .....	32
The Separate $\text{Na}^+$ and $\text{K}^+$ Conductances Can Be Determined .....	34
$\text{Na}^+$ Inactivation Is a Distinct Process .....	34
Action Potential Shape and Propagation Can Be Predicted on a Theoretical Basis .....	35
Changes in Internal Ion Concentrations Due to the Action Potential .....	35
Summary of the Action Potential .....	36
The Nerve Impulse .....	36
Local Circuits .....	37
Effect of Axon Diameter on Conduction Velocity .....	37
Myelination and Saltatory Conduction .....	38
Voltage-Gated Channels and Impulse Propagation .....	39

The Length of Axon Involved in a Nerve Impulse .....	39
Extracellular Field Potentials .....	40
Extracellular Recording from a Single Axon .....	40
Extracellular Recording from a Nerve Bundle – The Compound Action Potential .....	40
Classification of Nerve Fibres .....	42
Summary .....	43
<b>4 Voltage-Gated Ion Channels in Excitable Membranes .....</b>	<b>45</b>
Voltage-Gated Na <sup>+</sup> Channels .....	45
The Voltage-Gated Na <sup>+</sup> Channel Responsible for $I_{Na,t}$ , the Transient Rapidly Activating and Inactivating Na <sup>+</sup> Current .....	45
A Voltage-Gated Na <sup>+</sup> Channel Responsible for a Persistent Na <sup>+</sup> Current ( $I_{Na,p}$ ) .....	50
Voltage-Gated K <sup>+</sup> Channels .....	50
The Voltage-Gated K <sup>+</sup> Channel Responsible for the Delayed Rectifying Current ( $I_K$ ) .....	51
Voltage-Gated K <sup>+</sup> Channels Responsible for the A Current ( $I_A$ ) .....	51
Voltage-Gated K <sup>+</sup> Channel Responsible for the M Current ( $I_M$ ) .....	51
Voltage-Gated Ca <sup>2+</sup> Channels .....	51
Summary .....	53
<b>5 General Properties of Intercellular Communication in the Nervous System .....</b>	<b>55</b>
Electrical Synaptic Transmission .....	55
Excitatory Electrical Transmission .....	56
Inhibitory Electrical Transmission .....	58
Chemical Synaptic Transmission .....	58
General Outline of Chemical Synaptic Transmission .....	60
Summary .....	61
<b>6 The Presynaptic Neuron I: Release of Neurotransmitter .....</b>	<b>63</b>
Role of Ca <sup>2+</sup> in Transmitter Release .....	63
Release of Transmitter in Packets or Quanta .....	65
Quantal Content .....	67
Molecular Mechanisms Involved in Transmitter Release .....	70
Vesicle Manufacture .....	70
Transmitter Release: Vesicle Docking, Fusion and Exocytosis .....	71
Vesicle Endocytosis and Recycling .....	72
Role of Ca <sup>2+</sup> in Molecular Mechanisms of Release .....	72
Changes in Synaptic Efficacy Due to Presynaptic Mechanisms .....	73
Presynaptic Inhibition .....	73
Summary .....	73
<b>7 The Presynaptic Neuron II: Neurotransmitters .....</b>	<b>75</b>
Definition and Identification of Transmitters .....	75
Classification of Transmitters .....	76
Low-molecular-weight Transmitters .....	76
Neuroactive Peptides .....	80
Adenosine triphosphate (ATP) .....	82
Unconventional Transmitters .....	82
Some General Principles About Transmitters .....	85
Some Transmitters Appear To Be Either Excitatory or Inhibitory but Not Both .....	85

Some Transmitters May Have Either Excitatory or Inhibitory Actions .....	85
Many Neurons Contain Several Transmitters .....	85
A Single Neuron May Release More Than One Transmitter .....	85
Some Neuronal Systems Containing Particular Transmitters Have Very Wide-ranging Actions in the Brain .....	85
Summary .....	85
<b>8 The Postsynaptic Neuron I: Actions of Neurotransmitters .....</b>	<b>87</b>
Postsynaptic Receptors .....	87
Ionotropic Receptors .....	87
Metabotropic Receptors .....	90
Consequences of Transmitter-Receptor Combination .....	90
Actions at Ionotropic Receptors .....	90
Actions at Metabotropic Receptors .....	96
Summary .....	99
<b>9 The Postsynaptic Neuron II: The Neuron as an Integrative Device .....</b>	<b>101</b>
Neuron Doctrine and the Law of Dynamic Polarisation .....	101
The Generalised Neuron Concept .....	101
The Generalised Neuron as a Model for the Mammalian Motoneuron .....	102
The Generalised Neuron as a Model for Other Neurons .....	107
Synapses on Axon Terminals – Axo-axonic Synapses .....	108
Impulses in Dendrites .....	109
Dendritic Spines .....	113
The Importance of Synaptic Location .....	114
Excitatory Synaptic Location on Motoneurons .....	114
Inhibitory Synapses .....	115
Consequences of Synaptic Location Specificity .....	116
Summary .....	116
<b>10 Transmission Between Pairs of Identified Neurons .....</b>	<b>119</b>
Transmission Between Ia Afferent Fibres from Muscle Spindles and Spinal $\alpha$ -Motoneurons .....	119
Anatomy of the Ia– Motoneuron System .....	120
Ia Afferent Fibres .....	121
Ia Afferent Contacts upon Motoneurons .....	121
Actions of Ia Afferent Fibres on $\alpha$ -Motoneurons .....	121
Transmission Between Cutaneous Afferent Fibres and Neurons of Somatosensory Pathways .....	125
Transmission Between Hair Follicle Afferent Fibres and Spinocervical Tract Neurons .....	125
Transmission Between Cutaneous Afferent Fibres and Neurons of the Dorsal Column Nuclei .....	128
Summary .....	128
<b>11 Sense Organ Mechanisms .....</b>	<b>131</b>
Sense Organ Specificity .....	131
Sensory Transduction Mechanisms .....	132
Mechanoreceptors .....	132
Vertebrate Photoreceptors .....	134
Adaptation of Sensory Signals .....	138
Stimulus Encoding .....	139
Dynamic and Static Components of the Response .....	140

Centrifugal Control of Sense Organs .....	141
Mammalian Muscle Spindles and their Centrifugal Control .....	142
Summary .....	144
<b>12 Functional Organisation in Groups of Neurons .....</b>	<b>145</b>
Properties of Small Neuronal Circuits .....	145
The Two-Neuron Reflex Arc .....	145
Addition of Interneurons to the Two-Neuron Arc .....	147
The Mammalian Spinal Segmental Motor Apparatus – An Example of the	
Operation of Small Groups of Neurons .....	148
Spinal Monosynaptic Reflex .....	148
Reciprocal Inhibition of Motoneurons from Ia Afferent Fibres .....	150
Group II Afferent Fibres from Spindle Secondary Endings and the	
Monosynaptic Reflex Arc .....	151
Reflex Actions of Group Ib Afferent Fibres from Golgi Tendon Organs .....	151
Flexion Reflex and Crossed Extension Reflex .....	152
$\gamma$ -Motoneurons and the Control of Muscle Spindle Sensitivity .....	152
Other Influences on the Segmental Motor Apparatus .....	153
The Modular Design of Nervous Systems .....	153
Modular Design of the Cerebellum .....	154
Modular Organisation in the Cerebral Cortex .....	157
Summary .....	159
<b>13 Structural Organisation of Sensory and Motor Systems .....</b>	<b>161</b>
Sensory Systems .....	161
Hierarchical Organisation .....	161
Parallel Pathways .....	167
Descending (Centrifugal) Loops in the Ascending Sensory Systems .....	172
Motor Systems .....	173
Hierarchical Pathways .....	173
Parallel Pathways .....	174
Systems Controlling the Motor Hierarchy .....	174
Summary .....	176
<b>14 Functional Properties of Specific Sensory and Motor Systems .....</b>	<b>177</b>
Functional Properties of Specific Sensory Systems .....	177
Modality Specificity .....	177
Place Specificity .....	179
The Concept of Receptive Field .....	179
Receptive Field Organisation for Feature Extraction .....	181
Submodality Convergence .....	186
Centrifugal Control in Sensory Systems .....	187
Functional Properties of Specific Motor Systems .....	187
Motoneurons, Motor Units and Motoneuron Recruitment .....	187
Stimulus-Triggered Reactions .....	190
Centrally Programmed Movements .....	190
Voluntary Movement .....	191
Maps in the Brain .....	194
Why are there maps? .....	194
Why are there several maps at each level? .....	194
What is being mapped? .....	194
Summary .....	194

<b>15 The Nervous System and the Internal and External Environments –</b>	
<b>Homeostasis and Interactions</b> .....	<b>197</b>
The Neuroendocrine System .....	197
The Magnocellular Neurosecretory System .....	198
The Parvocellular Neurosecretory System .....	200
Circadian Rhythms .....	201
The Photoreceptive System .....	201
The Suprachiasmatic Nucleus .....	201
Output Systems from the Suprachiasmatic Nucleus .....	201
Behavioural State – Sleeping and Waking .....	201
Sleeping and Waking .....	201
Motivational Behaviour .....	205
Non-Specific Activation .....	205
Homeostasis and Motivational Behaviour .....	206
Control of Nociception .....	209
Segmental Control of Nociceptive Input .....	209
Descending Control of Nociception .....	209
Interactions with Other Organisms .....	210
Animal Communication .....	210
Human Language .....	212
Summary .....	212
<b>16 Formation, Maintenance and Plasticity of Synapses</b> .....	<b>215</b>
Development of the Nervous System .....	215
Determination of Nervous Tissue .....	215
Cell Differentiation .....	217
Synapse Formation and the Maintenance of Connections .....	219
Formation of the Neuromuscular Junction .....	219
Synapse Elimination .....	221
Formation of Synaptic Connections in the Visual System .....	222
Matching of Neuronal Populations .....	223
Programmed Cell Death and Nerve Growth Factor .....	224
Effects of Denervation in the Adult Central Nervous System .....	226
Abnormal Experience and the Formation of Synaptic Connections –	
Critical Periods .....	226
Summary .....	229
<b>17 Learning and Memory</b> .....	<b>231</b>
Forms of Learning and Memory .....	231
Cellular Mechanisms of Learning and Memory in Invertebrates .....	232
Non-associative Learning: Habituation and Sensitisation .....	232
Associative Learning in Invertebrates: Classical Conditioning .....	234
Cellular Mechanisms of Learning in Vertebrates .....	234
Mechanisms Underlying Long-Term Potentiation in the Hippocampus .....	234
Long-Term Depression in the Cerebellum .....	236
Learning and Memory in Humans .....	236
The Major Memory Systems .....	237
Summary .....	237
<b>References</b> .....	<b>239</b>
<b>Index</b> .....	<b>249</b>
