

Contents

Preface	vii
1 The Diffusion Equation	1
1.1 The Diffusion Equation	1
1.2 Semi-Infinite Domains	8
1.2.1 Boundary Value Problems	8
1.2.2 An Inverse Problem	12
1.3 Sources and Duhamel's Principle	13
1.4 Bounded Domains	16
1.5 The Maximum Principle	19
1.5.1 Maximum and Minimum Principles	19
1.5.2 Comparison and Uniqueness	25
1.6 Reference Notes	27
2 Reaction–Advection–Dispersion Equation	29
2.1 Mass Balance	30
2.2 Several Dimensions	35
2.3 Adsorption Kinetics	37
2.3.1 Instantaneous Kinetics	38
2.3.2 Noninstantaneous Kinetics	40
2.3.3 Multiple-Site Kinetics	41
2.4 Dimensionless Equations	43
2.5 Nonlinear Equations	44
2.5.1 A Comparison Principle	45
2.5.2 Similarity Solutions	48
2.5.3 Blowup of Solutions	50
2.5.4 Stability of the Zero Solution	52
2.6 The Reaction–Advection Equation	54
2.6.1 Semilinear Equations	54
2.6.2 Quasilinear Equations	56
2.7 Examples	58
2.7.1 Advection–Dispersion Equation	58
2.7.2 Boundary Conditions	60
2.7.3 A Perturbation Problem	62

2.7.4	Radial Dispersion	65
2.7.5	Fractured Media	68
2.8	Reference Notes	73
3	Traveling Wave Solutions	75
3.1	Examples of Traveling Waves	75
3.2	Hydrogeological Models	83
3.2.1	The Equilibrium Model	83
3.2.2	The Nonequilibrium Model	86
3.2.3	A Nonlinear Advection Model	87
3.3	Discontinuous Wave Fronts	89
3.3.1	Smooth Wave Fronts	91
3.3.2	Supercritical Waves	93
3.3.3	Langmuir Kinetics	95
3.3.4	Convergence to Traveling Waves	97
3.4	Stability of Traveling waves	98
3.4.1	General Ideas	98
3.4.2	L^2 -Stability of Traveling Waves	103
3.5	A Bioremediation Model	107
3.6	Reference Notes	111
4	Filtration Models	113
4.1	Models for Colloid Transport	114
4.1.1	The Herzig–Leclerc–LeGoff Model	114
4.1.2	Small Dispersion	116
4.1.3	Variable Rate Law	118
4.1.4	Classical Filtration Theory	120
4.2	An Attachment–Detachment Model	121
4.2.1	The Model	121
4.2.2	Traveling Waves	122
4.2.3	Contamination and Remediation Waves	124
4.2.4	Bounded Domains	129
4.3	Reference Notes	133
5	Subsurface Flow Dynamics	135
5.1	Darcy’s Law	135
5.1.1	Kinematical Flow Relations	136
5.1.2	Darcy’s Law in One Dimension	138
5.1.3	Darcy’s Law in Higher Dimensions	139
5.2	Models of Groundwater Flow	144
5.2.1	The Governing Equations	144
5.2.2	Boundary Conditions and Free Surfaces	145
5.2.3	The Dupuis Hypothesis	148
5.3	Transient Flows	152

5.3.1	The Diffusion Equation	152
5.3.2	Unsaturated Media	155
5.3.3	The Presence of Solutes	158
5.3.4	Thermal Changes	159
5.4	Reference Notes	161
6	Transport and Reactions in Rocks	163
6.1	Reaction Fronts	164
6.1.1	A Redox Front	164
6.1.2	Upstream Fronts	165
6.2	Porosity-Mineralogy Changes, I	169
6.2.1	Dispersive Reaction Fronts	171
6.2.2	Pure Advection Fronts	173
6.3	Porosity-Mineralogy Changes, II	174
6.3.1	The Model Equations	175
6.3.2	Dimensionless Equations	179
6.3.3	Pressure-driven flow	181
6.3.4	Velocity-Driven Flow	181
6.3.5	Numerical Results	183
6.4	General Equations of Reaction and Flow	184
6.4.1	Mineral-Porosity Changes	186
6.4.2	Solute Changes	187
6.4.3	Reaction Kinetics	187
6.5	Reference Notes	189
A	The Finite-Difference Method	193
B	The Method of Lines	201
C	Numerical Inversion of Transforms	205
D	Notation and Symbols	209
	References	211
	Index	221

Transport Modeling in Hydrogeochemical Systems

Logan, J.D.

2001, XIV, 226 p., Hardcover

ISBN: 978-0-387-95276-5
