

# Table of Contents

<b>Stellar Evolution in Globular Clusters</b> .....	1
<i>Bruce W. Carney</i>	
1 Fundamentals of Globular Cluster Stellar Evolution .....	2
1.1 The Appeal .....	2
1.2 Basic Physics .....	3
1.3 The Major Stages of Stellar Evolution .....	9
2 Unusual Features in the H-R Diagram .....	29
2.1 Binary Sequences .....	29
2.2 Blue Stragglers .....	34
2.3 The Second Parameter .....	39
3 RR Lyrae Variable Stars .....	45
3.1 Oosterhoff Classes .....	47
3.2 RR Lyrae Luminosities .....	48
3.3 Oosterhoff Classes <i>Redux</i> .....	58
4 Stellar Populations .....	59
4.1 How to Identify a Stellar Population .....	60
4.2 The Halo Population(s) .....	63
4.3 The Thick Disk Population .....	78
5 Metallicities .....	89
5.1 The Metallicity Distribution Function .....	90
5.2 Measuring Abundances .....	92
5.3 Some Results for Globular Clusters .....	99
5.4 Metallicity Indicators .....	102
5.5 The Importance of Proper Metallicity Scales .....	110
6 Elemental Abundance Ratios I.	
Clues to the History of Nucleosynthesis .....	111
6.1 The “ $\alpha$ ” Elements .....	112
6.2 Neutron Capture Elemental Abundances .....	124
6.3 Lithium .....	130
7 Elemental Abundance Ratios II. Internal Processes .....	136
7.1 Mixing .....	136
7.2 Mixing/Mass Loss/HB Morphology .....	144
7.3 Primordial Abundance Variations Within Clusters .....	148
8 Relative Ages of Globular Clusters .....	157
8.1 Relative Ages from Relative Turn-Off Luminosities .....	157
8.2 The Relative Ages of Field Stars .....	161
8.3 Relative Cluster Ages Derived from Color Differences .....	163
8.4 Cluster Ages vs. [O/Fe] and [ $\alpha$ /Fe] .....	165
8.5 The Second Parameter vs. Age .....	170
8.6 Cluster Ages vs. Galactocentric Distances .....	174

8.7	Summary	179
9	Absolute Ages of Globular Clusters	180
9.1	Introduction	180
9.2	Sources of Continuing Uncertainties: Theory	181
9.3	Sources of Continuing Uncertainties: Observations	183
9.4	Comparison with Results from Cepheid Variables	201
9.5	Other Distance Indicators	203
9.6	Additional Age Estimators	204
9.7	Summary	208
	References	209
	<b>Globular Cluster Systems</b>	223
	<i>William E. Harris</i>	
1	The Milky Way System: A Global Perspective	227
1.1	A First Look at the Spatial Distribution	227
1.2	The Metallicity Distribution	232
1.3	The Metal-Rich Population: Disk or Bulge?	237
1.4	The Distance to the Galactic Center	240
2	The Distance Scale	244
2.1	Statistical Parallax of Field Halo RR Lyraes	245
2.2	Baade-Wesselink Method	246
2.3	Trigonometric Parallaxes of HB Stars	247
2.4	Astrometric Parallax	247
2.5	White Dwarf Sequences	248
2.6	Field Subdwarf Parallaxes and Main Sequence Fitting	248
2.7	A Synthesis of the Results for the Milky Way	253
2.8	Comparisons in the LMC and M31	254
3	The Milky Way System: Kinematics	257
3.1	Coordinate Systems and Transformations	258
3.2	The Metal-Rich Clusters: Bulge-Like and Disk-Like Features	260
3.3	The Metal-Poor Clusters	264
3.4	Retrograde Motion: Fragments and Sidetracks	268
3.5	Orbits in the Outermost Halo	273
3.6	Some Conclusions	274
4	The Milky Way System: Dynamics and Halo Mass Profile	275
4.1	The Orbit Distribution	275
4.2	The Mass of the Halo: Formalism	277
4.3	The Mass of the Halo: Results	280
5	The Milky Way System: The Luminosity Function and Mass Distribution	285
5.1	Defining the GCLF	286
5.2	Correlations Within the Milky Way	287
5.3	Dynamical Effects	289
5.4	Analytic Forms of the GCLF	292

5.5	The LDF: Power-Law Forms .....	293
5.6	Comparisons with M31 .....	296
6	An Overview of Other Galaxies: Basic Parameters .....	301
6.1	Defining and Measuring Specific Frequency .....	305
6.2	Specific Frequency: Trends and Anomalies .....	307
6.3	Metallicity Distributions .....	310
6.4	Substructure: More Ideas About Galaxy Formation .....	313
6.5	Radial Velocities and Dynamics .....	319
7	The GCLF and the Hubble Constant .....	320
7.1	Origins .....	320
7.2	The Method: Operating Principles .....	322
7.3	Calibration .....	323
7.4	Functional Fitting and the Role of the Dispersion .....	329
7.5	The Hubble Constant .....	332
8	Globular Cluster Formation: In Situ Models .....	336
8.1	Summarizing the Essential Data .....	336
8.2	The Host Environments for Protoclusters .....	338
8.3	A Growth Model for Protoclusters .....	341
8.4	The Specific Frequency Problem: Cluster Formation Efficiency .....	347
8.5	Intergalactic Globular Clusters: Fact or Fancy? .....	351
8.6	The Relevance of Cooling Flows .....	352
8.7	Dwarf Ellipticals .....	353
9	Formation: Mergers, Accretions, and Starbursts .....	355
9.1	Mergers and the Specific Frequency Problem .....	355
9.2	Observations of Merger Remnants .....	358
9.3	A Toy Model for Mergers and Specific Frequencies .....	361
9.4	Other Aspects of the Merger Approach .....	364
9.5	The Role of Accretions .....	366
9.6	Starburst Galaxies .....	370
9.7	A Brief Synthesis .....	374
10	Appendix: An Introduction to Photometric Measurement .....	376
10.1	An Overview of the Color-Magnitude Diagram .....	376
10.2	Principles of Photometry and the Fundamental Formula .....	378
10.3	Aperture and PSF Measurement .....	386
10.4	Testing the Data .....	388
10.5	Dealing with Nonstellar Objects .....	390
	References .....	395
	<b>Index</b> .....	409

Star Clusters

Saas-Fee Advanced Course 28. Lecture Notes 1998

Swiss Society for Astrophysics and Astronomy

Carney, B.W.; Harris, W.E. - Labhardt, L.; Binggeli, B.  
(Eds.)

2001, XII, 418 p., Hardcover

ISBN: 978-3-540-67646-1
