

# Contents

<b>1. Introduction</b>	1
<b>2. Convolution quadrature method</b>	7
2.1 Basic theory of the convolution quadrature method	7
2.2 Numerical tests	11
2.2.1 Series expansion of the test functions $f_1$ and $f_2$	12
2.2.2 Computing the integration weights $\omega_n$	14
2.2.3 Numerical convolution	18
<b>3. Viscoelastically supported Euler-Bernoulli beam</b>	23
3.1 Integral equation for a beam resting on viscoelastic foundation	23
3.1.1 Fundamental solutions	24
3.1.2 Integral equation	27
3.2 Numerical example	33
3.2.1 Fixed-simply supported beam	33
3.2.2 Fixed-free viscoelastic supported beam	37
<b>4. Time domain boundary element formulation</b>	39
4.1 Integral equation for elastodynamics	40
4.2 Boundary element formulation for elastodynamics	44
4.3 Validation of proposed method: Wave propagation in a rod	46
4.3.1 Influence of the spatial and time discretization	47
4.3.2 Comparison with the “classical” time domain BE formulation	53
<b>5. Viscoelastodynamic boundary element formulation</b>	57
5.1 Viscoelastic constitutive equation	57
5.2 Boundary integral equation	61
5.3 Boundary element formulation	64
5.4 Validation of the method and parameter study	66
5.4.1 Three-dimensional rod	67
5.4.2 Elastic foundation on viscoelastic half space	71

<b>6. Poroelastodynamic boundary element formulation</b>	77
6.1 Biot's theory of poroelasticity	78
6.1.1 Elastic skeleton	78
6.1.2 Viscoelastic skeleton	80
6.2 Fundamental solutions	82
6.3 Poroelastic Boundary Integral Formulation	86
6.3.1 Boundary integral equation	86
6.3.2 Boundary element formulation	91
6.4 Numerical studies	93
6.4.1 Influence of time step size and mesh size	93
6.4.2 Poroelastic half space	98
<b>7. Wave propagation</b>	105
7.1 Wave propagation in poroelastic one-dimensional column	105
7.1.1 Analytical solution	105
7.1.2 Poroelastic results	111
7.1.3 Poroviscoelastic results	119
7.2 Waves in half space	124
7.2.1 Rayleigh surface wave	124
7.2.2 Slow compressional wave in poroelastic half space	131
<b>8. Conclusions – Applications</b>	135
8.1 Summary	135
8.2 Outlook on further applications	137
<b>A. Mathematic preliminaries</b>	143
A.1 Distributions or generalized functions	143
A.2 Convolution integrals	146
A.3 Laplace transform	147
A.4 Linear multistep method	148
<b>B. BEM details</b>	151
B.1 Fundamental solutions	151
B.1.1 Visco- and elastodynamic fundamental solutions	151
B.1.2 Poroelastodynamic fundamental solutions	152
B.2 "Classical" time domain BE formulation	154
<b>Notation Index</b>	157
<b>References</b>	159
<b>Index</b>	169

Wave Propagation in Viscoelastic and Poroelastic  
Continua

A Boundary Element Approach

Schanz, M.

2001, X, 170 p., Hardcover

ISBN: 978-3-540-41632-6
