List of Contributors	XVII
Introduction to Spatial Solitons	
Raymond Y. Chiao	1
1 Introduction	1
2 Solitons in one Transverse Dimension	2
3 Experiments	7
4 New Directions	8
Acknowledgments	16
References	16
Materials for Spatial Solitons	
Barry Luther-Davies, and George I. Stegeman	19
1 Introduction	19
2 Third-Order Kerr and Kerr-Like Saturating Nonlinearities	20
3 Higher-Order Kerr-Like Nonlinearities	25
4 Photorefractive Materials	27
5 Second-Order Nonlinearities for Quadratic Solitons	29
6 Conclusions	32
References	33
One-Dimensional Spatial Solitons in Kerr Media	
Yaron Silberberg, and George I. Stegeman	37
1 Introduction	37
2 Early and Miscellaneous Experiments	38
3 Spatial Solitons in Homogeneous Semiconductor Waveguides	40
3.1 Homogeneous AlGaAs Passive Waveguides	41
3.1.1 Weak-Beam-Spatial-Soliton Interactions	43
3.1.2 Dragging and Trapping of Orthogonally Polarized Spatial Solitons	44
3.1.3 Generation of Manakov Solitons	47
3.1.4 Stability of Orthogonally Polarized Solitons	48
3.1.5 Soliton Reconfigurable Interconnect	48
3.2 Spatial Solitons in Semiconductor Optical Amplifiers	50

4	Discrete Solitons	52
5	Summary	57
	References	58

Photorefractive Spatial Solitons

	Eugenio DelRe, Bruno Crosignani, and Paolo Di Porto	61
1	Introduction	61
2	Photorefractive Beam Nonlinearity	61
	2.1 Space-Charge Field	62
	2.2 Beam Propagation	63
3	Self-Trapping Mechanisms	64
	3.1 Quasi-Steady-State Solitons	64
	3.2 Screening Solitons	67
	3.2.1 Screening Slab-Solitons	71
	3.2.2 Screening Needle Solitons	73
	3.2.3 Self-bending	75
	3.3 Photovoltaic Solitons	75
	3.4 Self-Trapping in Semiconductors	76
	3.5 Self-Trapping in Paraelectrics	76
4	Material Nonlinearities and Solitons	78
5	Nonlinear Beam Interactions	78
6	Applications	79
	Acknowledgments	80
	References	80

Incoherent Solitons:

Self-Trapping of Weakly Correlated Wavepackets

	Mordechai Segev, and Demetrios N. Christodoulides	87
1	Introduction, First Experiments, and Intuition	87
2	The Modal Theory of Incoherent Solitons	92
3	The Coherent-Density Theory and the Propagation of Mutual Coherence	97
4	Dark Incoherent Solitons	101
5	Coherence Properties of Incoherent Solitons	107
6	Modulational Instability and Pattern Formation with Incoherent Wavepackets	112
7	Effects of Anisotropic Coherence and Propagation Dynamics	120
8	Prospects	122
	Dedication and Acknowledgments	123
	References	123

Quadratic Solitons

William Torruellas, Yuri S. Kivshar, and George I. Stegeman	127
1 Introduction and Historical Remarks	127
2 Summary of Theoretical Results	128
2.1 Basic Models for Quadratic Solitons	128
2.2 (1 + 1)-Dimensional Quadratic Solitons	131
2.2.1 Solitons in the Cascading Limit	131
2.2.2 Two-Wave Bright Solitons	132
2.2.3 Two-Wave Dark Solitons	134
2.3 (2 + 1)-Dimensional Quadratic Solitons	136
2.3.1 General Remarks	136
2.3.2 Fundamental Cylindrical Solitons	137
2.3.3 Soliton Scattering and Fusion	139
2.4 Important Generalizations and Related Problems	141
2.4.1 Walking Solitons	141
2.4.2 Three-Wave Quadratic Solitons	142
2.4.3 Competing Nonlinearities	143
2.4.4 Doughnut Modes and Vortex Solitons	144
2.4.5 Quadratic Light Bullets	145
2.4.6 Discrete $\chi^{(2)}$ Systems and Nonlinear Photonic Modes	146
3 Summary of Experimental Results	148
3.1 Freely Propagating Spatial Solitons	149
3.1.1 (1 + 1)-Dimensional Spatial Solitons	149
3.1.2 (2 + 1)-Dimensional Spatial Solitons	150
3.2 Temporal Solitons and Light Bullets	158
3.3 Quadratic Solitons in Cavities	159
3.4 Soliton Interaction	160
3.5 Transverse Effects	160
4 Concluding Remarks	162
Acknowledgments	164
References	164

Bragg Solitons: Theory and Experiments

C. Martijn de Sterke, Benjamin J. Eggleton, and John E. Sipe	169
1 Introduction	169
2 Theory of Periodic Structures	175
2.1 Coupled-Mode Theory	175
2.1.1 Dispersion Relation and Eigenfunctions	178
2.2 CW Solutions to the Coupled-Mode Equations	180
2.3 Nonlinear-Schrödinger-Equation Limit	181
2.4 Bragg Grating Solitons and Gap Solitons	182
3 Experimental Considerations: Grating Fabrication	183
3.1 Optical-Fiber Bragg Gratings	183
3.2 Semiconductors	186

3.3	Chalcogenide Glasses	187
3.4	Experimental Apparatus	187
4	Summary of Experimental Results	189
4.1	Continuous-Wave Experiments	189
4.2	Pulse Experiments	191
5	Further Developments	195
5.1	Optical Push Broom	195
5.2	Frequency Conversion and Generation	197
5.3	Nonuniform Gratings	198
5.4	Novel Nonlinear Grating-Based Compressors	198
5.5	Polarization Effects	199
5.5.1	Optical AND Gate	199
5.5.2	Polarization Rotation and Polarization Instability	200
5.6	Copropagating Geometries	202
5.7	Gratings with Quadratic Nonlinearities	202
6	Outlook	203
	Acknowledgments	204
	References	205

Stability of Spatial Optical Solitons

	Yuri S. Kivshar, and Andrey A. Sukhorukov	211
1	Introduction	211
2	Linear Eigenvalue Problem	213
3	Soliton Internal Modes and Stability	214
4	Stability Criterion for Fundamental Solitons	218
5	Marginal Stability Point: Asymptotic Analysis	222
6	Nonlinear Guided Waves and Impurity Modes	223
6.1	Model and General Remarks	223
6.2	Stability of Symmetric and Asymmetric Modes	225
6.2.1	Symmetric Modes	225
6.2.2	Asymmetric Modes	226
6.3	Example: Competing Power-Law Nonlinearities	226
7	Multicomponent Solitary Waves	228
7.1	General Theory: N Coupled NLS Equations	228
7.2	Example: Two Coupled NLS Equations	231
8	Multihump Solitary Waves	234
9	Oscillatory Instabilities	237
10	Symmetry-Breaking Instabilities	239
11	Concluding Remarks	242
	Acknowledgments	243
	References	243

Nonlinear Wave Collapse

Luc Bergé.....	247
1 Introduction	247
2 General Results on the Collapse of a Single Component	250
3 Interaction Regimes of Several Collapsing Components	253
4 Collapse with Four-Wave Mixing and Walk-Off.....	258
5 Interplay between Quadratic and Cubic Nonlinearities	261
6 Conclusion	265
Acknowledgments	265
References	265

Discrete Solitons

Falk Lederer, Sergey Darmanyan, and Andrey Kobayakov	269
1 Introduction	269
2 Basic Mathematical Models.....	271
3 Discrete Diffraction and Modulational Instability	273
3.1 Linear Plane Waves and Discrete Diffraction	273
3.2 Nonlinear Plane Waves and Their Modulational Instability ..	275
3.2.1 Cubic Nonlinearity	275
3.2.2 Quadratic Nonlinearity.....	276
4 Solitons in Cubic Nonlinear Media.....	278
4.1 Types of Soliton Solutions.....	278
4.1.1 Even (Intersite) Bright Solitons	278
4.1.2 Odd (On-Site) Bright Solitons	279
4.1.3 Topological and Flat-Top Solitons	280
4.2 Stability Analysis	281
4.2.1 Bright Solitons	282
4.2.2 Topological and Flat-Top Solitons	283
5 Solitons in Quadratic Nonlinear Media	285
5.1 Types of Soliton Solutions	285
5.1.1 Even Bright Solitons.....	285
5.1.2 Odd Bright Solitons	286
5.1.3 Topological and Flat-Top Solitons	286
5.2 Stability Analysis	287
5.2.1 Bright Solitons	287
5.2.2 Topological and Flat-Top Solitons	288
6 Conclusions.....	290
Acknowledgments	290
References	290

Optical Vortex Solitons

Grover A. Swartzlander, Jr.	293
1 Introduction	293
2 Vortex Wavefunctions	294
3 Vortex Wavevectors	295
4 r-Vortex Solutions	297
5 Hankel Transform into Vortex Modes	298
6 Point Vortex	299
7 Multiple Vortices	300
8 Nonlinear Refraction	303
9 Optical Vortex Solitons	304
10 Pinched Optical Vortex	306
11 Conservation of Momentum	307
12 Closing Thoughts	308
References	309

Solitons of the Complex Ginzburg–Landau Equation

Nail Akhmediev, and Adrian Ankiewicz	311
1 Introduction	311
2 Balance Equations and Perturbation Theory	315
3 Exact Solutions	317
3.1 Solutions of the Cubic CGLE	318
3.1.1 The Solution with Arbitrary Amplitude	320
3.1.2 Chirp-Free Soliton	320
3.2 Dark-Soliton Solution of the Cubic Equation	321
3.3 Solitons of the Quintic CGLE	322
3.3.1 Relation Between Coefficients	322
3.3.2 Solutions with Fixed Amplitude	322
3.3.3 The Solution with Arbitrary Amplitude	323
3.3.4 Flat-Top Solitons	323
3.3.5 Rational Solution	324
3.3.6 Chirp-Free Soliton	324
3.4 Reduction to a Set of Ordinary Differential Equations	324
4 Stability Issues	326
4.1 Stable Solitons	327
5 Multiplicity of Solutions	330
5.1 Composite Solitons	330
5.2 Moving Solitons	331
5.3 Coexistence of Solitons	332
5.4 Collisions	333
6 Soliton Bound States	334
7 Conclusions	337
References	337

Existence, Stability, and Properties of Cavity Solitons

William J. Firth, and Graeme K. Harkness	343
1 Introduction	343
2 History	344
3 Mean-Field Models and Cavity Solitons	346
4 Cavity Solitons in Semiconductor Microresonators	351
5 Stationary Solutions and Stability	352
6 Applications	355
7 Conclusion	355
Acknowledgments	356
References	356

Parametric Solitons in Passive Structures with Feedback

Stefano Trillo, and Marc Haelterman	359
1 Introduction	359
2 General Models for Quadratic Passive Cavities	360
2.1 Mean-Field Models	361
2.2 Order-Parameter Equations	363
3 Competing Instabilities in Intracavity Parametric Mixing	366
4 Optical Parametric Oscillators	370
4.1 Localized Phase Defects or Domain Walls in DOPOs	370
4.2 Below-Threshold Bright Signal Solitons in DOPOs	374
4.3 Solitons in NDOPOs	376
4.4 Role of Walk-Off	376
5 Intracavity Second-Harmonic Generation	378
5.1 Pattern Formation and Localized Structures	378
5.2 Vectorial (Type II) Effects	381
6 Parametric Gap Solitons in Distributed-Feedback Structures	383
7 Summary and Further Developments	387
Acknowledgments	389
References	389

Spatial Solitons in Resonators

Carl O. Weiss, Gintas Sleky, Victor B. Taranenko, Kestutis Staliunas, and Robert Kuszelewicz	395
1 Introduction	395
2 Solitons in a Laser with a Nonlinear Absorber	397
3 Parametric-Mixing Solitons	404
4 Nonlinear Semiconductor Resonators	408
Acknowledgments	415
References	415

Nonlinear Magneto-Optic Solitons

Allan D. Boardman, and Ming Xie	417
1 Introduction to Magneto-Optical Materials	417
2 Envelope Equations for Longitudinal and Transverse Configurations	418
3 Transverse Case: Potential Analysis	421
4 Transverse Case: Control of Solitons by an Electrode Structure ..	424
5 Conclusions	430
References	432

**Coupled Propagation of Light and Matter Waves:
Solitons and Transverse Instabilities**

Mark Saffman, and Dmitry V. Skryabin	433
1 Introduction	433
2 Governing Equations	435
3 Modulational Instability	440
4 Solitons and Vortices	443
5 Discussion	445
References	446
