

Contents

The theory of the nucleon-nucleon interaction	
<i>Robert Vinh Mau</i>	1
The atomic nucleus observed with electromagnetic probes	
<i>Thomas William Donnelly</i>	39
The nuclear shell model	
<i>Alfredo Poves, Frederic Nowacki</i>	70
The nuclear collective motion	
<i>Witold Nazarewicz</i>	102
The interacting boson model	
<i>Francesco Iachello</i>	141
The limits of the mean field	
<i>Elvira Moya de Guerra</i>	155
The microscopic treatment of the nuclear system	
<i>Peter Ring</i>	195
Semi-classical methods in nuclear physics	
<i>David M. Brink</i>	233
Scattering and reactions of halo nuclei	
<i>Ronald C. Johnson</i>	259
Nuclear physics away from the valley of stability	
<i>Juha Aysto</i>	292
Structure of vacuum and elementary matter: from superheavies via hypermatter to antimatter	
<i>Walter Greiner</i>	316
Index	343

An Advanced Course in Modern Nuclear Physics

Arias, J.M.; Lozano, M. (Eds.)

2001, XII, 350 p., Hardcover

ISBN: 978-3-540-42409-3
