

Contents

Introduction	1
1. The Concept of Toroidal Groups	3
1.1 Irrationality and toroidal coordinates	3
Toroidal groups	3
Complex homomorphisms	7
Toroidal coordinates and \mathbf{C}^{*n-q} -fibre bundles	9
Maximal Stein subgroups of toroidal groups	14
1.2 Toroidal subgroups and pseudoconvexity	16
The maximal toroidal subgroup of a complex Lie group	16
Pseudoconvexity	19
The maximal complex subtorus of a complex Lie group	22
2. Line Bundles and Cohomology	25
2.1 Line bundles on toroidal groups	25
Automorphic factors	25
The characteristic decomposition of an exponential system	28
Automorphic summands	32
Theta bundles and topologically trivial line bundles	37
2.2 Cohomology of toroidal groups	44
Toroidal theta and wild groups	44
Dolbeault cohomology of toroidal theta groups	47
Dolbeault cohomology of complex Lie groups	54
3. Quasi-Abelian Varieties	57
3.1 Ample Riemann forms	57
The Hermitian decomposition of an automorphic factor	57
Period relations	61
Ample Riemann forms	64
Maximal Stein subgroups of quasi-Abelian varieties	68
3.2 Characterization of quasi-Abelian varieties	73
Cohomology and the average of differential forms	73

Chern forms of fibre metrics	80
Holomorphic mappings to projective spaces	85
Meromorphic functions on toroidal groups	88
4. Reduction and Extension	93
4.1 Automorphic forms	93
Reduction to the positive definite case	93
Further properties of meromorphic functions	101
Existence of automorphic forms and Lefschetz type theorems.	103
4.2 Extendable line bundles	106
The case of \mathbf{C}^{*n-q} -fibre bundles	106
The case of kind ℓ	113
Explicit representation of automorphic forms	120
References	125
Index	131

Toroidal Groups

Line Bundles, Cohomology and Quasi-Abelian Varieties

Abe, Y.; Kopfermann, K.

2001, X, 142 p., Softcover

ISBN: 978-3-540-41989-1
