Forms of Relativistic Dynamics

<i>Bernard L.G. Bakker</i>	1
1 Introduction	1
2 The Poincaré Group	3
3 Forms of Relativistic Dynamics	4
3.1 Comparison of Instant Form, Front Form, and Point Form . . .	6
4 Light-Front Dynamics	9
4.1 Relative Momentum, Invariant Mass	9
4.2 The Box Diagram	14
5 Poincaré Generators in Field Theory	19
5.1 Fermions Interacting with a Scalar Field	20
5.2 Instant Form	20
5.3 Front Form (LF)	21
5.4 Interacting and Non-interacting Generators on an Instant and on the Light Front	22
6 Light-Front Perturbation Theory	23
6.1 Connection of Covariant Amplitudes to Light-Front Amplitudes	24
6.2 Regularization	26
6.3 Minus Regularization	26
7 Triangle Diagram in Yukawa Theory	27
7.1 Covariant Calculation	28
7.2 Construction of the Current in LFD	30
7.3 Numerical Results	37
8 Four Variations on a Theme in ϕ^3 Theory	37
8.1 Covariant Calculation	39
8.2 Instant-Form Calculation	42
8.3 Calculation in Light-Front Coordinates	47
8.4 Front-Form Calculation	49
9 Dimensional Regularization: Basic Formulae	51
10 Four-Dimensional Integration	52
11 Some Useful Integrals	53
References	53

Light-Cone Quantization: Foundations and Applications

<i>Thomas Heinzl</i>	55
1 Introduction	55
2 Relativistic Particle Dynamics	58
2.1 The Free Relativistic Point Particle	58
2.2 Dirac's Forms of Relativistic Dynamics	64
2.3 The Front Form	68
3 Light-Cone Quantization of Fields	74
3.1 Construction of the Poincaré Generators	74
3.2 Schwinger's (Quantum) Action Principle	76
3.3 Quantization as an Initial- and/or Boundary-Value Problem..	78
3.4 DLCQ – Basics	84
3.5 DLCQ – Causality	88
3.6 The Functional Schrödinger Picture	94
3.7 The Light-Cone Vacuum	96
4 Light-Cone Wave Functions	98
4.1 Kinematics	99
4.2 Definition of Light-Cone Wave Functions	101
4.3 Properties of Light-Cone Wave Functions	104
4.4 Examples of Light-Cone Wave Functions	105
5 The Pion Wave Function in the NJL Model	113
5.1 A Primer on Spontaneous Chiral Symmetry Breaking	114
5.2 NJL Folklore	117
5.3 Schwinger–Dyson Approach	121
5.4 Observables	127
6 Conclusions	136
References	138

Quantization of Constrained Systems

<i>John R. Klauder</i>	143
1 Introduction	143
1.1 Initial Comments	143
1.2 Classical Background	144
1.3 Quantization First: Standard Operator Quantization	145
1.4 Reduction First: Standard Path Integral Quantization	146
1.5 Quantization First \neq Reduction First	147
1.6 Outline of the Remaining Sections	148
2 Overview of the Projection Operator Approach to Constrained System Quantization	148
2.1 Coherent States	148
2.2 Constraints	149
2.3 Dynamics for First-Class Systems	150
2.4 Zero in the Continuous Spectrum	151
2.5 Alternative View of Continuous Zeros	152

3	Coherent State Path Integrals	
	Without Gauge Fixing	152
3.1	Enforcing the Quantum Constraints	153
3.2	Reproducing Kernel Hilbert Spaces	154
3.3	Reduction of the Reproducing Kernel	155
3.4	Single Regularized Constraints	156
3.5	Basic First-Class Constraint Example	157
4	Application to General Constraints	158
4.1	Classical Considerations	158
4.2	Quantum Considerations	160
4.3	Universal Procedure to Generate Single Regularized Constraints	162
4.4	Basic Second-Class Constraint Example	164
4.5	Conversion Method	165
4.6	Equivalent Representations	166
4.7	Equivalence of Criteria for Second-Class Constraints	167
5	Selected Examples of First-Class Constraints	168
5.1	General Configuration Space Geometry	168
5.2	Finite-Dimensional Hilbert Space Examples	170
5.3	Helix Model	172
5.4	Reparameterization Invariant Dynamics	173
5.5	Elevating the Lagrange Multiplier to an Additional Dynamical Variable	175
6	Special Applications	176
6.1	Algebraically Inequivalent Constraints	176
6.2	Irregular Constraints	178
7	Some Other Applications of the Projection Operator Approach	180

Algebraic Methods of Renormalization

	<i>Klaus Sibold</i>	183
1	Generalities	183
1.1	Renormalization Schemes	183
1.2	The Action Principle	186
1.3	Green Functions and Operators	189
2	The Quantization of Gauge Theories	190
2.1	The Abelian Case	190
2.2	BRS Transformations	192
2.3	The Slavnov–Taylor Identity	194
3	Applications	197
3.1	The Electroweak Standard Model	197
3.2	Supersymmetry in Non-linear Realization	201
3.3	SUSY Gauge Theories	202

Functional Integrals for Quantum Theory

Ludwig Streit 207

1 Introduction 207

2 White Noise Analysis 208

 2.1 Smooth and Generalized Functionals 210

 2.2 Characterization of Generalized Functionals $\Phi \in (S)^*$ 210

 2.3 Calculus 212

3 Quantum Field Theory 213

 3.1 The Vacuum Density 213

 3.2 Dynamics in Terms of the Vacuum 214

4 Feynman Integrals 216

 4.1 The Interactions 218

 4.2 The Morse Potential 220

Seminars 223

Methods of Quantization

Lectures Held at the 39. Universitätswochen für Kern-
und Teilchenphysik, Schladming, Austria

Latal, H.; Schweiger, W. (Eds.)

2001, XI, 228 p. 8 illus., Hardcover

ISBN: 978-3-540-42100-9
