<b>I.</b>	<b>Modelling the Continuum</b>	1
1	Scale, Model, and Validation	7
2	Concepts and Formulation	8
2.1	The Main Idea	8
2.2	Frame of Reference and Coordinate System	9
2.3	Configurations of the System	10
2.4	Material Frame Indifference	11
3	Lagrangian Description	12
3.1	Definition	12
3.2	Continuity Hypotheses	13
3.3	Weakening of Continuity Hypotheses	15
3.4	Physical Interpretation of the Lagrangian Description: Pathlines	16
3.5	Streaklines	16
3.6	Particle Velocity	17
3.7	Generalised Reference Configuration	17
4	Eulerian Description	18
4.1	Definition	18
4.2	Determining Pathlines	19
4.3	Streamlines	20
4.4	Steady Motions	21
4.5	Semi-Steady Motions	22
4.6	Notation for Velocity	22
5	Remarks	23
	Summary of Main Formulas	27
	Exercises	28
<b>II.</b>	<b>Deformation</b>	31
1	Transport, Transformation, and Deformation	37
2	Convective Transport in a Homogeneous Transformation	38
2.1	Homogeneous Transformation	38
2.2	Material Vector and Convective Transport	39
2.3	Transport and Expansion of a Volume	40
2.4	Transport of an Oriented Surface	42

3	Deformation in a Homogeneous Transformation .....	43
3.1	Expansion Tensor .....	43
3.2	Using the Expansion Tensor .....	45
3.3	Green–Lagrange Strain Tensor .....	48
3.4	Polar Factorisation .....	50
4	Deformation of the Continuum: General Case .....	51
4.1	Basic Principle: The Homogeneous Tangent Map ....	51
4.2	Transport Equations .....	53
4.3	Deformations .....	54
4.4	Displacement .....	54
4.5	Polar Factorisation and Rigid Body Transformation..	55
4.6	Frame Indifference .....	56
5	Infinitesimal Transformations .....	57
5.1	Definition .....	57
5.2	Linearised Strain Tensor .....	57
5.3	Gradient of a Tensor Field on the Current Configuration .....	58
6	Geometrical Compatibility of a Linearised Strain Field ....	59
6.1	Statement of the Problem .....	59
6.2	Compatibility Conditions .....	60
6.3	Remarks .....	62
6.4	Application .....	64
7	Final Comments .....	65
7.1	Transformation and Deformation .....	65
7.2	Lagrangian Parametrisation Relative to a Generalised Configuration .....	65
7.3	Practical Investigation of Strains .....	66
	Summary of Main Formulas .....	69
	Exercises .....	71
<b>III.</b>	<b>Kinematics .....</b>	<b>81</b>
1	Introduction .....	87
2	Lagrangian Kinematics of the Continuum .....	87
2.1	Convective Transport and Material Derivative .....	87
2.2	Lagrangian Strain Rate .....	89
3	Eulerian Kinematics of the Continuum .....	90
3.1	Motivation .....	90
3.2	Material Derivative of a Vector .....	90
3.3	Eulerian Strain Rate .....	91
3.4	Use of the Strain Rate Tensor .....	92
3.5	Spin Tensor. Rate of Volume Dilatation .....	95
3.6	Comparison with Linearised Strain for Infinitesimal Transformations .....	98
3.7	Geometrical Compatibility of a Strain Rate Field ....	99
3.8	Rigid Body Motion .....	99

3.9	Weak Formulation of Geometrical Compatibility . . . .	100
3.10	Infinitesimal Transformations . . . . .	101
3.11	Frame Indifference . . . . .	101
4	Material Derivatives . . . . .	102
4.1	Material Derivatives in the Lagrangian Description . .	102
4.2	Material Derivatives in the Eulerian Description . . . .	103
4.3	Material Derivative of a Point Function . . . . .	104
4.4	Material Derivative of a Volume Integral . . . . .	105
4.5	Material Derivative of a Circulation . . . . .	115
4.6	Material Derivative of a Flux . . . . .	116
5	Conservation of Mass . . . . .	118
5.1	Equation of Continuity . . . . .	118
5.2	Integral Form . . . . .	120
5.3	Material Derivative of a Mass Integral in the Eulerian Description . . . . .	120
	Summary of Main Formulas . . . . .	122
	Exercises . . . . .	126

#### IV. The Virtual Work Approach

	<b>to the Modelling of Forces . . . . .</b>	<b>133</b>
1	The Problem of Modelling Forces . . . . .	139
1.1	Modelling Forces in a System of Material Points . . . .	139
1.2	The Virtual Work Method . . . . .	144
2	Dualisation and Virtual Work for a System of Material Points . . . . .	144
2.1	System Comprising a Single Material Point . . . . .	144
2.2	System Comprising Several Material Points . . . . .	145
2.3	Virtual Velocity, Virtual Motion and Virtual Work . .	147
2.4	Statement of the Principle of Virtual Work . . . . .	149
2.5	Virtual Motions in Relation to the Modelling of Forces . . . . .	149
3	Virtual Work Method for a System of Material Points . . . .	150
3.1	Presentation of the Virtual Work Method . . . . .	150
3.2	Example of an Application . . . . .	150
3.3	Remarks on this Application of the Virtual Work Method . . . . .	154
3.4	Geometrical Compatibility of $\hat{\delta}_{ij}$ . Systems of Hinged Rods . . . . .	154
4	The Virtual Work Method . . . . .	156
4.1	General Presentation of the Method . . . . .	156
4.2	Summary of the Virtual Work Method . . . . .	158
4.3	Remarks . . . . .	159
4.4	Change of Frame. Frame Indifference . . . . .	159
5	Rigid Body Motions. Distributors and Wrenches . . . . .	160
5.1	Distributors . . . . .	160

5.2	Wrenches . . . . .	161
5.3	Restriction of a Linear Form Defined on a Space of Virtual Motions to the Rigid Body Virtual Motions	162
5.4	Wrench of a Force System . . . . .	162
5.5	Fields of Distributors and Wrenches. Differentiation .	163
6	General Results . . . . .	165
6.1	Defining the System and its Motions . . . . .	165
6.2	Virtual Work . . . . .	166
6.3	Law of Mutual Actions and Fundamental Law of Dynamics . . . . .	166
6.4	Remarks . . . . .	167
7	Momentum Theorem. Kinetic Energy Theorem . . . . .	168
7.1	Definition of the System and its Motions . . . . .	168
7.2	Wrench of the Quantities of Acceleration. Momentum Wrench . . . . .	168
7.3	Conservation of Momentum . . . . .	170
7.4	Euler's Theorem . . . . .	171
7.5	Kinetic Energy Theorem . . . . .	172
7.6	Discontinuous Real Velocity Field. Shock Waves . . . .	173
8	Looking Ahead . . . . .	178
	Summary of Main Formulas . . . . .	179
	Exercises . . . . .	181
<b>V.</b>	<b>Modelling Forces in Continuum Mechanics . . . . .</b>	<b>183</b>
1	Statement of the Problem . . . . .	189
2	Scalar Field Model of Internal Forces. Pressure . . . . .	190
2.1	Virtual Motions. Virtual Rate of Work by Quantities of Acceleration . .	190
2.2	Virtual Rate of Work by External Forces . . . . .	191
2.3	Virtual Rate of Work by Internal Forces . . . . .	194
2.4	Equations of Motion . . . . .	195
2.5	Relevance of the Model. Pressure Field . . . . .	198
2.6	The Fundamental Law of Dynamics . . . . .	199
2.7	Discontinuous Virtual Velocity Field . . . . .	199
3	Modelling Internal Forces by a Tensor Field. Stresses . . . .	202
3.1	Virtual Motions. Virtual Rates of Work by Quantities of Acceleration and External Forces . . . . .	202
3.2	Virtual Rate of Work by Internal Forces . . . . .	203
3.3	Equations of Motion . . . . .	204
3.4	Remarks . . . . .	206
3.5	Cauchy Stress Tensor. Stress Vector . . . . .	208
3.6	Modelling Internal Forces Within the Continuum Using the Stress Vector . . . . .	211
3.7	Explicit Forms of the Equations of Motion . . . . .	214
3.8	Discontinuous Virtual Velocity Field . . . . .	215

3.9	Discontinuities in the Stress Field .....	218
3.10	Euler's Theorem .....	222
3.11	Kinetic Energy Theorem .....	223
3.12	Rate of Work by Deformation .....	224
3.13	Geometrical Compatibility Revisited. A Weak Formulation .....	225
3.14	Weak Formulation of the Equations of Motion .....	225
3.15	Frame Indifference of the Cauchy Stress Tensor .....	226
4	Lagrangian Formulation of Stresses .....	226
4.1	Piola–Kirchhoff Stress Tensor .....	226
4.2	Piola–Lagrange Stress Tensor. Equations of Motion ..	230
5	Review and Prospects .....	232
5.1	Mechanicist and Physicist .....	232
5.2	Summary of Results .....	233
5.3	Micropolar Media .....	234
	Summary of Main Formulas .....	238
	Exercises .....	240
<b>VI.</b>	<b>Local Analysis of Stresses .....</b>	<b>249</b>
1	Implementing the Notion of Stress .....	255
2	Some Practical Definitions .....	255
2.1	Dimensions and Units .....	255
2.2	Normal Stress and Shear Stress .....	256
2.3	Sign Convention. Physical Interpretation .....	258
2.4	Cauchy Reciprocal Theorem .....	258
2.5	Change of Basis .....	259
2.6	Principal Axes. Principal Stresses .....	262
2.7	Invariants of the Stress Tensor. Representation Theorem .....	263
2.8	Deviatoric Stress Tensor .....	265
3	Mohr Representation .....	266
3.1	Mohr Representation .....	266
3.2	Mohr Circles .....	267
3.3	Description of Principal Circles .....	269
3.4	Practical Consequences .....	271
3.5	Examples of Stress States .....	271
4	Yield Conditions for Isotropic Materials .....	274
4.1	Presentation .....	274
4.2	General Principles .....	274
4.3	Tresca Yield Criterion .....	276
4.4	Von Mises Yield Criterion .....	277
5	Material Derivative of the Stress Tensor .....	278
5.1	Material Derivative .....	278
5.2	Intrinsic Derivative (Truesdell Rate) .....	279
5.3	Corotational Derivative (Jaumann Rate) .....	280

Summary of Main Formulas .....	282
Exercises .....	283
<b>VII. Thermoelasticity .....</b>	<b>295</b>
1 From Experience to a Constitutive Law .....	301
2 Experimental Observations .....	302
2.1 Generalities .....	302
2.2 Simple Tension Test .....	303
2.3 Further Experimental Results .....	304
2.4 Remarks .....	305
3 Thermodynamics of Continuous Media .....	306
3.1 First Law: Energy Equation .....	306
3.2 Second Law: Fundamental Inequality .....	311
3.3 Lagrangian Expressions .....	313
4 Thermoelastic Constitutive Laws .....	315
4.1 Elasticity Hypothesis .....	315
4.2 Unconstrained Thermoelasticity .....	316
4.3 Thermoelasticity with Internal Constraints .....	321
4.4 Material Symmetries .....	324
4.5 Isotropic Thermoelastic Material in the Reference Configuration .....	325
4.6 Internal Constraints from the Eulerian Standpoint ...	327
5 Unconstrained Linear Thermoelasticity .....	328
5.1 Introduction .....	328
5.2 Physical Linearisation .....	328
5.3 Isotropic Linear Thermoelastic Material .....	332
5.4 Infinitesimal Transformation and Geometrical Linearisation .....	334
5.5 Stability of Thermoelastic Materials .....	340
5.6 Typical Values for Materials in Common Use .....	343
5.7 Examples of Anisotropic Thermoelastic Materials ...	343
6 Historical Perspective .....	346
Summary of Main Formulas .....	349
Exercises .....	351
<b>VIII. Thermoelastic Processes and Equilibrium .....</b>	<b>361</b>
1 Quasi-Static Thermoelastic Processes .....	367
1.1 The Need for a Constitutive Law .....	367
1.2 Formulating the Quasi-Static Thermoelastic Problem	369
1.3 Solving the Quasi-Static Thermoelastic Problem .....	372
1.4 Some Examples of Boundary Conditions .....	374
2 Linearising the Quasi-Static Thermoelastic Process .....	376
2.1 Linearisation Hypotheses .....	376
2.2 The Principles of Linearisation .....	377

2.3	Usual Equations for Linearised Thermoelastic Processes . . . . .	380
3	Linearised Quasi-Static Thermoelastic Processes . . . . .	381
3.1	Decoupling the Heat Problem . . . . .	381
3.2	Thermoelastic Equilibrium . . . . .	381
3.3	Uniqueness Theorem . . . . .	382
3.4	Natural Initial State and Principle of Superposition . . . . .	382
3.5	Nonzero Initial Self-Equilibrating Stress State . . . . .	383
3.6	Preloaded Initial State . . . . .	383
4	Solution to the Thermoelastic Equilibrium Problem . . . . .	385
4.1	Statement of the Problem . . . . .	385
4.2	Statically Admissible Stress Fields. Kinematically Admissible Displacement Fields . . . . .	386
4.3	Thermoelastic Equilibrium and Associated Isothermal Elastic Equilibrium . . . . .	389
4.4	Solution Methods . . . . .	391
5	Displacement Method . . . . .	392
5.1	Basic Principle . . . . .	392
5.2	Isothermal Equilibrium and Homogeneous Isotropic Materials. Navier Equation . . . . .	393
5.3	Strongly Heterogeneous Materials and Thermal Shocks . . . . .	395
6	Stress Method . . . . .	396
6.1	Basic Principle . . . . .	396
6.2	Isothermal Equilibrium and Homogeneous Isotropic Materials. Beltrami–Michell Equations . . . . .	398
6.3	Strongly Heterogeneous Materials and Thermal Shocks . . . . .	401
7	Torsion of a Cylindrical Rod . . . . .	402
7.1	Statement of the Problem . . . . .	402
7.2	Solution: Displacement Method . . . . .	403
7.3	Remarks . . . . .	407
7.4	Invariances . . . . .	408
7.5	Rod with Circular Cross Section . . . . .	409
7.6	Solution by the Stress Method . . . . .	412
7.7	Yield Point of the Rod in Torsion . . . . .	413
8	Saint Venant Principle . . . . .	416
	Summary of Main Formulas . . . . .	419
	Exercises . . . . .	423
<b>IX.</b>	<b>Classic Topics in Three-Dimensional Elasticity . . . . .</b>	<b>429</b>
1	Introduction . . . . .	435
2	Tension–Compression of a Cylindrical Rod . . . . .	436
2.1	Statement of the Problem . . . . .	436
2.2	Form of the Solution . . . . .	437

2.3	Remarks .....	438
2.4	Yield Point of the Rod in Simple Tension or Compression .....	440
2.5	Tension–Torsion of a Cylindrical Rod .....	440
3	Normal Bending of a Cylindrical Rod .....	442
3.1	Statement of the Problem .....	442
3.2	Form of the Solution .....	443
3.3	Remarks .....	445
3.4	Yield Point of the Rod in Normal Bending .....	450
4	Off-Axis Bending of a Cylindrical Rod .....	451
4.1	Bending Normal to the $Oy$ Axis .....	451
4.2	Off-Axis Bending. Statement of the Problem .....	452
4.3	Form of the Solution .....	452
4.4	Remarks .....	452
5	Bending of a Cylindrical Rod with Axial Loading .....	454
5.1	Definition .....	454
5.2	Solution and Remarks .....	454
5.3	Saint Venant Problem .....	455
6	Elastic Equilibrium of a Hollow Sphere Under Pressure .....	456
6.1	Statement of the Problem .....	456
6.2	Form of the Solution .....	456
6.3	Remarks .....	457
6.4	Yield Point of a Hollow Sphere Under Pressure .....	460
7	Elastic Equilibrium of a Cylindrical Tube Under Pressure ...	461
7.1	Statement of the Problem .....	461
7.2	Form of the Solution .....	462
7.3	Remarks .....	464
	Summary of Main Formulas .....	465
	Exercises .....	467
<b>X.</b>	<b>Variational Methods in Linearised Thermoelasticity .....</b>	<b>483</b>
1	Direct Methods and Variational Methods .....	489
1.1	Introduction .....	489
1.2	Direct Methods of Solution .....	491
1.3	Presentation of Variational Methods .....	492
1.4	The Virtual Work Theorem .....	493
1.5	Notions of Convexity .....	494
1.6	Expressing the Linearised Thermoelastic Constitutive Law .....	496
2	Minimum of the Potential Energy .....	499
2.1	Convexity of $\mathbb{C}(S_{\xi_i}, \xi_i^d)$ .....	499
2.2	Minimum Principle for Displacements .....	499
2.3	Explicit Expressions .....	502
2.4	Uniqueness of the Solution .....	502
2.5	Thermoelastic Material with Internal Constraints .....	503

3	Minimum of the Complementary Energy . . . . .	504
3.1	Convexity of $\mathbb{S}(\underline{F}, S_{T_i}, T_i^d)$ . . . . .	504
3.2	Minimum Principle for Stresses . . . . .	505
3.3	Explicit Expressions . . . . .	507
3.4	Uniqueness of the Solution . . . . .	508
3.5	Combining Minimum Principles for Displacements and Stresses . . . . .	509
3.6	Thermoelastic Material with Internal Constraints . . . . .	510
3.7	Prestressed and Preloaded Initial Reference State . . . . .	511
4	Variational Methods . . . . .	512
4.1	Converses to the Minimum Principles . . . . .	512
4.2	Variational Methods . . . . .	514
5	Natural Initial State. Isothermal Equilibrium . . . . .	519
5.1	Expressions for the Elastic Energy . . . . .	519
5.2	Clapeyron Equation . . . . .	520
5.3	Example: Apparent Modulus of a Heterogeneous Cylinder . . . . .	522
5.4	The Maxwell–Betti Reciprocity Theorem . . . . .	525
6	Self-Equilibrating Stress Fields. Minimum Potential Theorem . . . . .	526
6.1	Self-Equilibrating Stress Fields for the Problem . . . . .	526
6.2	Minimum Complementary Energy and Minimum Potential Theorem . . . . .	529
6.3	Remarks . . . . .	530
7	Parametric Problems . . . . .	531
7.1	Aim of the Study . . . . .	531
7.2	Statically Admissible and Kinematically Admissible Fields for the Parametric Problem . . . . .	532
7.3	Self-Equilibrating Stress Fields for the Parametric Problem . . . . .	535
7.4	Examples of Parametric Problems . . . . .	536
8	Energy Theorems for Parametric Thermoelastic Equilibrium . . . . .	541
8.1	Castigliano’s Theorem . . . . .	541
8.2	Minimum Potential Theorem . . . . .	545
8.3	Isothermal Equilibrium from the Natural Initial State in Linear Elasticity . . . . .	549
9	Conclusion . . . . .	550
	Summary of Main Formulas . . . . .	551
	Exercises . . . . .	555
<b>XI.</b>	<b>Statics of One-Dimensional Media . . . . .</b>	<b>569</b>
1	The Problem of One-Dimensional Modelling . . . . .	577
2	Statics of Wires . . . . .	579
2.1	Geometrical Model. Real Motions . . . . .	579
2.2	Vector Space of Virtual Motions . . . . .	580

2.3	Virtual Rate of Work by External Forces . . . . .	580
2.4	Virtual Rate of Work by Internal Forces . . . . .	582
2.5	Equilibrium Equations . . . . .	583
2.6	Consistency of the Model. Physical Interpretation . . .	584
2.7	Discontinuities in the Internal Force Field . . . . .	586
2.8	Integrating the Equilibrium Equations . . . . .	587
2.9	Discontinuities in the Virtual Velocity Field . . . . .	588
2.10	Relevance of the Model . . . . .	589
3	Statics of Beams . . . . .	592
3.1	Guiding Ideas . . . . .	592
3.2	Geometrical Model. Real Motions . . . . .	593
3.3	Vector Space of Virtual Motions . . . . .	594
3.4	Virtual Rate of Work by External Forces . . . . .	594
3.5	Virtual Rate of Work by Internal Forces . . . . .	596
3.6	Equilibrium Equations . . . . .	598
3.7	Consistency of the Model. Physical Interpretation . . .	600
3.8	Discontinuities in the Internal Force Field . . . . .	601
3.9	Integrating the Equilibrium Equations . . . . .	602
3.10	Discontinuities in the Virtual Motion . . . . .	603
3.11	Relevance of the Model . . . . .	604
3.12	Comparing One-Dimensional and Three-Dimensional Models . . . . .	607
3.13	The Navier–Bernoulli Condition . . . . .	610
4	Structures Composed of One-Dimensional Members . . . . .	613
4.1	Introduction . . . . .	613
4.2	Endpoint and Support Boundary Conditions . . . . .	614
4.3	Boundary Conditions at Assembly Joints . . . . .	618
4.4	Connections and Supports . . . . .	621
4.5	Static Analysis of Structures . . . . .	621
4.6	Kinematic Analysis of Structures . . . . .	623
4.7	Plane Structures Loaded In-Plane . . . . .	625
	Summary of Main Formulas . . . . .	628
	Exercises . . . . .	631
<b>XII.</b>	<b>Thermoelastic Structural Analysis . . . . .</b>	<b>645</b>
1	Introduction . . . . .	651
2	Thermoelastic Behaviour of the One-Dimensional Medium . .	652
2.1	Formulating a Constitutive Law . . . . .	652
2.2	Infinitesimal Transformation. Displacement and Strain Distributors . . . . .	653
2.3	Virtual Work Theorem . . . . .	655
2.4	Guiding Ideas . . . . .	655
2.5	Isothermal Elastic Behaviour of a Straight Beam Element from the Natural Initial State . . . . .	656

2.6	Thermoelastic Behaviour of a Straight Beam Element in a Prestressed Initial State .....	663
2.7	Thermoelastic Behaviour of the One-Dimensional Medium in Structural Analysis .....	665
2.8	Extensions .....	667
3	Linearised Thermoelastic Equilibrium of One-Dimensional Structures .....	667
3.1	Small Perturbation Hypothesis .....	667
3.2	Statically Determinate Problems .....	668
3.3	Statically Indeterminate Problems .....	668
3.4	Main Formulas .....	669
3.5	Plane Structures Loaded In-Plane .....	670
3.6	Straight Beams Loaded In-Plane .....	672
4	Example Applications .....	674
4.1	Statically Determinate Problems .....	674
4.2	Statically Indeterminate Problems .....	676
5	Conclusion .....	678
	Summary of Main Formulas .....	680
	Exercises .....	682

## Appendices

<b>I.</b>	<b>Elements of Tensor Calculus .....</b>	<b>693</b>
1	Tensors on a Vector Space .....	699
1.1	Definition .....	699
1.2	First Rank Tensors .....	700
1.3	Second Rank Tensors .....	700
2	Tensor Product of Tensors .....	701
2.1	Definition .....	701
2.2	Examples .....	701
2.3	Product Tensors .....	702
3	Tensor Components .....	703
3.1	Definition .....	703
3.2	Change of Basis .....	704
3.3	Mixed Second Rank Tensors .....	705
3.4	Twice Contravariant or Twice Covariant Second Rank Tensors .....	707
3.5	Components of a Tensor Product .....	708
4	Contraction .....	708
4.1	Definition of the Contraction of a Tensor .....	708
4.2	Contracted Multiplication .....	709
4.3	Doubly Contracted Product of Two Tensors .....	711
4.4	Total Contraction of a Tensor Product .....	713
4.5	Defining Tensors by Duality .....	713
4.6	Invariants of a Mixed Second Rank Tensor .....	714

5	Tensors on a Euclidean Vector Space . . . . .	714
5.1	Definition of a Euclidean Space . . . . .	714
5.2	Application: Deformation in a Linear Mapping . . . . .	715
5.3	Isomorphism Between $E$ and $E^*$ . . . . .	715
5.4	Covariant Form of Vectors in $E$ . . . . .	717
5.5	First Rank Euclidean Tensors and the Contracted Product . . . . .	718
5.6	Second Rank Euclidean Tensors of Simple Product Form and their Contracted Products . . . . .	719
5.7	Second Rank Euclidean Tensors . . . . .	721
5.8	Rank $n$ Euclidean Tensors . . . . .	726
5.9	Choice of Orthonormal Basis in $E$ . . . . .	726
5.10	Principal Axes and Principal Values of a Real Symmetric Second Rank Euclidean Tensor . . . . .	727
6	Tensor Fields . . . . .	729
6.1	Definition . . . . .	729
6.2	Derivative and Gradient of a Tensor Field . . . . .	729
6.3	Divergence of a Tensor Field . . . . .	731
6.4	Curvilinear Coordinates . . . . .	732
	Summary of Main Formulas . . . . .	737
<b>II.</b>	<b>Differential Operators: Basic Formulas . . . . .</b>	<b>741</b>
1	Orthonormal Cartesian Coordinates . . . . .	743
1.1	Coordinates . . . . .	743
1.2	Vector Field . . . . .	743
1.3	Scalar Function . . . . .	744
1.4	Second Rank Tensor Field . . . . .	744
2	General Cartesian Coordinates . . . . .	744
2.1	Coordinates . . . . .	744
2.2	Vector Field . . . . .	745
2.3	Scalar Function . . . . .	745
2.4	Second Rank Tensor Field . . . . .	745
3	Cylindrical Coordinates . . . . .	746
3.1	Parametrisation . . . . .	746
3.2	Vector Field . . . . .	746
3.3	Scalar Function . . . . .	747
3.4	Symmetric Second Rank Tensor Field . . . . .	747
4	Spherical Coordinates . . . . .	747
4.1	Parametrisation . . . . .	747
4.2	Vector Field . . . . .	748
4.3	Scalar Function . . . . .	749
4.4	Symmetric Second Rank Tensor Field . . . . .	749

<b>III. Elements of Plane Elasticity</b> .....	751
1 Plane Problems .....	757
2 Plane Strain Thermoelastic Equilibrium .....	757
2.1 Plane Linearised Strain Tensor .....	757
2.2 Plane Strain Displacement Field .....	758
2.3 Plane Strain Thermoelastic Equilibrium in a Homogeneous and Isotropic Material .....	758
2.4 Solution by the Displacement Method .....	760
2.5 Solution by the Stress Method .....	764
2.6 Remarks on the Plane Strain Two-Dimensional Problem .....	767
2.7 Two-Dimensional Beltrami–Michell Equation .....	767
2.8 Body Forces Deriving from a Potential. Airy Function .....	768
2.9 Cylindrical Tube Under Pressure .....	770
3 Plane Stress Thermoelastic Equilibrium .....	771
3.1 Plane Stress Tensor .....	771
3.2 Plane Stress Field .....	771
3.3 Plane Stress Thermoelastic Equilibrium in a Homogeneous and Isotropic Material .....	771
3.4 Solution .....	773
3.5 Cylindrical Tube Under Pressure .....	778
Summary of Main Formulas .....	780
<b>Bibliography</b> .....	783
<b>Subject Index</b> .....	789
