Introduction	1
Literature	4
1 Parent Structures	7
1.1 Acyclic Hydrocarbon Systems	7
1.1.1 Linear Systems	7
1.1.2 Branched Systems	9
1.1.3 Systems with Branched Side Chains	10
1.1.4 Multivalent Substituent Groups	12
1.2 Cyclic Systems	13
1.2.1 Cyclic Hydrocarbon Systems	13
1.2.1.1 Monocyclic Hydrocarbons	13
1.2.1.2 Polycyclic Hydrocarbons	14
1.2.1.2.1 Fused Polycyclic Hydrocarbons	14
1.2.1.2.2 Bridged Polycyclic Hydrocarbons	29
1.2.1.2.2.1 von Baeyer System	29
1.2.1.2.2.2 Bridged Fused Systems	32
1.2.1.2.3 Spirocyclic Hydrocarbon Systems	34
1.2.1.2.4 Hydrocarbon Ring Systems Linked Through Single or Double Bonds; Ring Assemblies	38
1.2.1.2.5 Cyclic Hydrocarbons with Side Chains	41
1.2.2 Heterocyclic Systems	43
1.2.2.1 Trivial Names	43
1.2.2.2 Replacement Nomenclature (“a” Nomenclature)	51
1.2.2.3 The Hantzsch-Widman System	54
1.2.2.4 Fused Heterocyclic Systems	57
1.3 Phane Nomenclature	68
1.3.1 Cyclophanes	68
1.3.2 Other Phanenes	73

2 Substituted Systems	75
2.1 Preliminary General Remarks	75
2.2 Nomenclature Types for Substituted Systems	76
2.2.1 Substitutive Nomenclature	76
2.2.2 Functional Class Names (Formerly: Radiofunctional Nomenclature)	84
2.2.3 Additive Nomenclature	85
2.2.4 Subtractive Nomenclature	88
2.2.5 Conjunctive Nomenclature	91
2.2.6 Naming of Substituted Assemblies of Identical Units	92
2.2.6.1 Components with direct Linkage	93
2.2.6.2 Identical Components Bound to Di- or Polyvalent Groups	94
2.2.7 Naming of Radical and Ionic Species	96
2.2.7.1 Free Radicals	96
2.2.7.2 Cations	99
2.2.7.3 Radical Cations (Cation Radicals)	104
2.2.7.4 Anions	105
2.2.7.5 Radical Anions (Anion Radicals)	107
2.2.7.6 Compounds with Two (are More) Identically Charged Centers	108
2.2.7.7 Compounds with Positively and Negatively Charged Centers (Zwitterions)	109
3 Brief Demonstration of the General Nomenclature Rules for the Most Important Traditional Compound Classes (Functional Parents)	112
3.1 Carboxylic Acids, Sulfonic Acids etc. and their Derivatives	112
3.2 Nitriles, Isocyanates, and Similar Compounds	119
3.3 Aldehydes and Ketones	120
3.4 Alcohols, Phenols, and their Derivatives	126
3.5 Ethers and Thioethers	130
3.6 Amines, Imines, and their Derivatives	133
3.7 Halogen Derivatives	137
3.8 Compounds with Nitrogen Chains	138
3.8.1 Azo- and Azoxy Compounds	138
3.9 Hydrazines and their Derivatives	141
3.10 Diazo- and Diazonium Compounds	142
3.11 Compounds with Chains of Three or More Nitrogen Atoms	143
3.12 Other Polynitrogen Parent Systems	144

4 Metalorganic and Metalloidorganic Compounds	146
4.1 Element Hydride (Elementane) Names	146
4.2 Functionally Substituted Elementanes	149
4.3 Elementanes with Repeating Diads	149
4.4 Organic Derivatives of Alkali and Alkaline Earth Metals and Comparable Compounds	150
4.5 “ate” Complexes	153
5 Carbohydrates	155
5.1 Aldoses	155
5.2 Ketoses	158
5.3 Ketoaldoses (Aldoketoses, Aldosuloses)	160
5.4 Deoxy Sugars	161
5.5 Amino Sugars and Analogously Substituted Derivatives	162
5.6 Transformations of the Carbonyl Functions	162
5.6.1 Oximes, Hydrazones, Osazones	162
5.6.2 Acetals, Ketals	163
5.7 Branched Sugars	163
5.8 Sugar Alcohols (Alditols)	164
5.9 Acids Derived from Sugars	165
5.10 O-Substitution	168
5.10.1 O-Substitution with Alkyl and Acyl Groups	168
5.10.2 Cyclic Acetals and Ketals	168
5.11 Monosaccharides as Substituent Groups	169
5.12 Glycosides and Glycosyl Compounds	170
5.12.1 Glycosides	170
5.12.2 Glycosyl Compounds	172
5.13 Oligosaccharides	173
5.13.1 Oligosaccharides with Free Hemiacetal Group	173
5.13.2 Oligosaccharides without Free Hemiacetal Group	174
5.13.3 Polysaccharides (Glycans)	175
5.14 Customary Trivial Names	176
6 Construction of the Names of Complex Compounds	178
6.1 Determination of the Highest Ranked Chain (Main or Senior Chain)	178
6.2 Determination of the Most Senior Ring System	179
6.3 Treatment of the Most Senior Characteristic Group in the Light of the Two Preceding Paragraphs	180
6.4 Numbering	181
6.5 Order of Prefixes	182

6.6	Isotopically Modified Compounds	183
6.7	Specifications of Stereochemistry	186
6.7.1	<i>cis/trans</i> Isomerism; the <i>Z/E</i> -Convention	186
6.7.1.1	Double Bond Systems	187
6.7.1.2	Ring Systems	188
6.7.2	Specification of Absolute and Relative Configuration	189
6.7.2.1	Compounds with Stereogenic (Formerly Asymmetric) Carbon (and Analogous) Centers	189
6.7.2.2	Compounds with Helical Stereogenic Units	193
6.7.2.2.1	Screw-like Molecules (One Chirality Axis)	193
6.7.2.2.2	Propeller-like Molecules (Several Chirality Axes)	194
6.7.2.3	Molecules Exhibiting Planar Chirality	196
6.7.3	Concluding Remarks	197
7	Appendix	198
7.1	Complete List of “a” Terms Utilized in Replacement and Heterane Nomenclature	198
7.2	Tables of Customary Trivial (and Semitrivial) Names	199
	Subject Index	219

Systematic Nomenclature of Organic Chemistry
A Directory to Comprehension and Application of its
Basic Principles
Hellwinkel, D.
2001, X, 230 p., Softcover
ISBN: 978-3-540-41138-3
