Introduction	1
1 Historical Background	
1.1 First Approaches: Extracardiac Operations for Angina	2
1.2 The Transition Era: From Indirect to Direct Revascularization Procedures	2
1.2.1 The Indirect Procedures	2
1.2.2 The Vineberg Procedure	3
1.3 Direct Coronary Artery Revascularization Procedures	4
1.3.1 The Pioneers	4
1.3.2 Early Forms of Direct Coronary Artery Surgical Procedures	4
1.3.3 The Golden Age of CABG	5
1.3.4 A New Nonsurgical Direct Approach: Percutaneous Transluminal Coronary Angioplasty (PTCA)	5
1.4 The Reappraisal of Indirect Myocardial Revascularization	6
1.4.1 Transmyocardial Revascularization: From Needle to Laser	6
1.4.2 Therapeutic Angiogenesis	6
1.4.3 Neurostimulation	7
2 Microvascular Anatomy of the Heart	
2.1 Introduction	8
2.2 Direct Communication with Heart Chambers and Sinusoids	8
2.2.1 Thebesian Vessels and the Quest for Direct Communications with Heart Chambers	8
2.2.2 The Emergence of the Sinusoid Concept	10
2.2.3 Myocardial Sinusoids: Myth or Reality	12
2.3 Myocardial Capillaries	13
2.4 Collateral Circulation of the Heart	14
2.4.1 Intercoronary Anastomoses	14
2.4.2 Extracardiac Anastomoses	16
2.5 Microvasculature Anatomy in Ischemic Heart Disease	18
3 The Vineberg Procedure: A Forgotten Operation?	
3.1 Introduction	19
3.2 Scientific Bases	19

3.2.1	Anatomy of Myocardial Microcirculation	19
3.2.2	Distribution of Coronary Artery Disease	20
3.2.3	Specificity of the IMA as a Conduit	20
3.3	Experimental Work	20
3.3.1	The Original Procedure	20
3.3.2	Adjuncts to the Original Procedure	22
3.3.3	Renewed Experimental Interest in the Original Vineberg Concept	23
3.4	Technical Aspects of the Vineberg Procedure	25
3.4.1	Patient Preparation and Access to the Operative Field	25
3.4.2	IMA Mobilization	25
3.4.3	Heart Exposure	26
3.4.4	Making of Intramyocardial Tunnel	26
3.4.5	Implantation of the IMA	26
3.5	Clinical Data	27
3.5.1	Early Clinical Results	27
3.5.2	The Placebo Criticism and the Need for Objective Evidence	27
3.5.3	Arteriographic Evidence	28
3.5.4	The Advent of the Vineberg Procedure	28
3.5.5	Physiologic Evidence	29
3.5.6	Patient Selection Criteria	29
3.5.7	Abandonment of the Procedure	30
3.5.8	Late Results	30
3.6	Vineberg and the Sinusoid Concept	32
3.7	Conclusions	33
4	Myocardial Acupuncture: The Immediate Forerunner of Transmyocardial Laser Revascularization	
4.1	The Reptilian Heart Concept	34
4.2	Sen's Pioneer Experimental Work	34
4.3	Other Experimental Work	36
4.4	Clinical Application	39
4.5	Renewed Experimental Interest in Transmyocardial Acupuncture	39
5	Laser Physics	
5.1	Introduction	41
5.2	Fundamentals	41
5.2.1	Ordinary Light Sources	41
5.2.2	Laser Light	42
5.3	The Physical Process of Laser Action	44
5.3.1	Spontaneous Emission of Radiation	44
5.3.2	Absorption of Radiation	44
5.3.3	Stimulated Emission of Electromagnetic Radiation	44
5.3.4	Absorption and Amplification of Light	45
5.3.5	Population Inversion and Laser Media	45

5.4	Laser Devices	46
5.5	Types of Lasers	47
5.5.1	CO ₂ Lasers	47
5.5.2	Ho:YAG Laser	49
5.5.3	Excimer Laser	49
5.6	The Ho:YAG Cardio Genesis System	49
6	Laser Interaction with Tissue	
6.1	Laser Interaction with Tissue: General Consideration	55
6.1.1	Qualitative Interaction	55
6.1.2	Quantitative Interaction	55
6.1.3	Reflection, Absorption, and Scattering	56
6.1.4	General Characteristics of Laser Beams Used in TMLR	57
6.1.5	Thermal Interaction	58
6.1.6	Nonthermal Interaction	61
6.2	Laser Interaction with Tissue During TMLR	61
6.2.1	CO ₂ Lasers	61
6.2.2	Ho:YAG Lasers	64
6.2.3	Excimer Laser	65
6.2.4	Comparison of Tissue Injury Resulted in the Three Types of Laser	65
6.2.5	Extent of Laser-Mediated Injury	65
7	Transmyocardial Laser Revascularization: Patient Selection, Operative Technique, and Perioperative Care	
7.1	Patient Selection and Preoperative Evaluation	68
7.2	Contraindications	69
7.3	Patient Preparation for the Operation	69
7.4	Operative Technique	70
7.4.1	Surgical Approach	70
7.4.2	Operating Procedure	71
7.4.3	Channel Density	72
7.4.4	Area of Treatment	72
7.4.5	Postoperative Care	72
8	The Pioneering Era of Transmyocardial Laser Revascularization	
8.1	Experimental Data	74
8.1.1	Infarction Reduction and Improved Survival in the Canine Model	74
8.1.2	Other Animal Models, Other Results	75
8.2	Initial Clinical Applications of TMLR	76
9	Laser Channel Morphology	
9.1	Introduction	77
9.2	Experimental Studies in Normal Myocardium	77
9.2.1	CO ₂ Laser	77
9.2.2	Ho:YAG Laser in a Pig Model	79

9.2.3	Excimer Laser	84
9.2.4	Comparative Studies	85
9.2.5	Conclusions	87
9.3	Experimental Studies in Acutely Ischemic Myocardium	87
9.3.1	CO ₂ Laser	87
9.3.2	Ho:YAG Laser	88
9.3.3	Excimer Laser	91
9.3.4	Conclusions	91
9.4	Experimental Studies in Chronically Ischemic Myocardium	92
9.4.1	Ho:YAG Laser	92
9.4.2	Comparative Study: CO ₂ Versus Ho:YAG	92
9.4.3	Conclusions	92
9.5	Clinical Findings	92
9.5.1	Reports Suggesting Channel Patency	93
9.5.2	Reports Suggesting That Channels Do Not Remain Patent ..	94
9.5.3	Conclusions	95
10	Pathophysiology of Transmyocardial Laser Revascularization	
10.1	Introduction	96
10.2	Relationship of Intramyocardial and Intraventricular Pressure	96
10.3	Is There Blood Flow Through the Channels?	98
10.3.1	Experimental Studies	98
10.3.2	Clinical Studies	102
10.3.3	Conclusions	103
10.4	Angiogenesis and TMLR	104
10.4.1	Acute Studies	104
10.4.2	Chronic Studies	106
10.4.3	Morphometric Analysis of Neovascularization in a Pig Model	109
10.4.4	Conclusions	124
10.5	TMLR and Nerve Destruction	125
10.5.1	Transmural Laser Channels	125
10.5.2	Nontransmural Laser Channels	126
10.5.3	Clinical Study	127
10.6	TMLR and Scar Retraction	127
10.6.1	Material and Methods	127
10.6.2	Results	127
10.6.3	Discussion	130
10.7	The Placebo Effect	132
11	Clinical Results of Transmyocardial Laser Revascularization	
11.1	Introduction	133
11.2	CO ₂ Laser	133
11.2.1	The Pioneer Work of Mirhoseini	133
11.2.2	The Texas Heart Institute Experience	134

11.2.3	The Initial Brigham and Women's Hospital Experience	135
11.2.4	The First United States Multicenter Study	135
11.2.5	The Hamburg University TMLR Trial: A Long-Term Follow-up	136
11.2.6	The Lake Constance Heart Center Experience: The Largest Single-Institution Series	137
11.2.7	The Cambridge Study: A Single-Center Randomized Controlled Trial	138
11.2.8	A U.S. Multicenter Randomized Controlled Trial	139
11.2.9	The European and Asian International Registry Report	140
11.2.10	An Indian Trial with a Younger Patient Population	141
11.2.11	TMLR as an Adjunct to Minimally Invasive CABG	142
11.3	Ho:YAG Laser	144
11.3.1	The Initial Leipzig Group Experience	144
11.3.2	The Pisa Group Initial Experience	144
11.3.3	The Houston Randomized Series	145
11.3.4	ATLANTIC: A U.S. Multicenter Randomized Control Trial . .	146
11.3.5	A U.S. Multicenter Randomized Controlled Trial with Refractory Class 4 Angina Patients	147
11.4	Excimer Laser	148
11.5	Other Indications of TMLR	148
11.5.1	Unstable Angina	148
11.5.2	Cardiac Transplantation Allograft Vasculopathy	149
12	Transmyocardial Laser Revascularization and Left Ventricular Function	
12.1	Introduction	151
12.2	Experimental Data	151
12.2.1	CO ₂ Laser	151
12.2.2	Ho:YAG Laser	154
12.3	Clinical Studies	161
12.3.1	Left Ventricular Function as a Risk Factor	161
12.3.2	Left Ventricular Function as an Outcome	161
13	Adverse Effects of Transmyocardial Laser Revascularization	
13.1	Introduction	163
13.2	Perioperative Morbidity and Mortality	163
13.3	Arrhythmias	165
13.3.1	Intraoperative Arrhythmias	165
13.3.2	Postoperative Arrhythmias	166
13.4	Microembolization	166
13.5	Left Ventricular Function	167
13.6	Outcome after TMLR Cannot be Predicted by Perioperative Hemodynamics	167
13.6.1	Material and Methods	167
13.6.2	Results	168
13.6.3	Discussion	169

14	Alternatives Forms of Transmyocardial Laser Revascularization	
14.1	Introduction	175
14.2	The Endoventricular Approach	175
14.2.1	Experimental Data	175
14.2.2	Preliminary Clinical Data	176
14.2.3	Catheter Navigational Control: A Look into the Future	177
14.3	The Thoracoscopic Approach	178
14.3.1	Experimental Data	178
14.3.2	First Clinical Cases	178
15	Angiogenesis: Pathophysiology	
15.1	Introduction	179
15.2	Mechanisms of Blood Vessel Formation	179
15.3	Angiogenic Growth Factors	180
15.3.1	Fibroblast Growth Factor	180
15.3.2	Vascular Endothelial Growth Factor	181
15.3.3	Scatter Factor/Hepatocyte Growth Factor	182
15.3.4	Platelet-Derived Growth Factor	183
15.3.5	Transforming Growth Factor	183
15.3.6	Nitric Oxide	184
15.3.7	Heparin	184
15.3.8	Antiangiogenic Factors	185
15.4	Embryogenesis	185
15.4.1	Vasculogenesis and Angiogenesis	185
15.4.2	Molecular Regulators of Vascular Formation in the Embryo	185
15.5	Collateral Development	186
15.6	Occlusive Vascular Disease and Vascular Injury	187
15.6.1	Atherosclerotic Plaque	188
15.6.2	VEGF and bFGF in the Response to Vessel Injury	188
15.6.3	Reendothelialization after Intimal Injury and Hyperplasia ..	189
15.7	Criteria for Angiogenesis	189
16	Therapeutic Angiogenesis: The Basis	
16.1	Introduction	190
16.2	Choice of Growth Factor	190
16.3	Potential Side Effects of Therapeutic Angiogenesis	191
16.4	Type and Method of Delivery	192
16.4.1	Recombinant Protein	192
16.4.2	Gene Therapy	192
16.4.3	Delivery Systems for Angiogenesis by Gene Transfer	194
16.4.4	Gene Expression Control	195
17	Therapeutic Angiogenesis: Results	
17.1	Introduction	196
17.2	Animal Studies	196
17.2.1	Heparin	196

17.2.2	The Fibroblast Growth Factor Family	197
17.2.3	Vascular Endothelial Growth Factor	200
17.2.4	Fibroblast and Vascular Endothelial Growth Factors: Combined Administration	201
17.2.5	Scatter Factor/Hepatocyte Growth Factor	202
17.3	Human Studies	202
17.3.1	Heparin	202
17.3.2	FGF and VEGF	203
18	Combined Therapy: Transmyocardial Laser Revascularization and Therapeutic Angiogenesis	
18.1	Introduction	206
18.2	Transmyocardial Laser Revascularization Associated with Administration of "Classical" Growth Factors	206
18.3	Improved Angiogenesis in TMLR Combined with Bone Protein Growth Factors Mixture	208
18.3.1	Material and Methods	208
18.3.2	Results	209
18.3.3	Discussion	209
19	Neurostimulation	
19.1	Introduction	210
19.2	Underlying Mechanism	210
19.3	Neurostimulation Treatment Modalities	211
19.3.1	Transcutaneous Electrical Nerve Stimulation	211
19.3.2	Spinal Cord Stimulation	211
19.4	Patient Selection	211
19.5	Safety Aspects	212
19.6	Effects of Neurostimulation on Myocardial Physiology and Ischemia	212
19.7	Effects of Neurostimulation on the Autonomic Nervous System	213
19.8	Clinical Results	213
19.9	Conclusions	215
	Conclusions	216
