

Table of Contents

Notation and Convention	1
1. Variational Inequalities with Continuous Mappings	3
1.1 Problem Formulation and Basic Facts	3
1.1.1 Existence and Uniqueness Results	3
1.1.2 Variational Inequalities and Related Problems	8
1.2 Main Idea of CR Methods	15
1.2.1 Newton-like Iterations	15
1.2.2 Basic Properties of CR Methods	19
1.3 Implementable CR Methods	24
1.3.1 A CR Method and its Properties	24
1.3.2 Convergence and Rates of Convergence	26
1.3.3 A Modified Line Search	32
1.3.4 Acceleration Techniques for CR Methods	35
1.4 Modified Rules for Computing Iteration Parameters	38
1.4.1 A Modified Rule for Computing the Step size	38
1.4.2 A Modified Rule for Computing the Descent Direction	42
1.5 CR Method Based on a Frank-Wolfe Type Auxiliary Procedure	47
1.5.1 Description of the Method	47
1.5.2 Convergence	48
1.6 CR Method for Variational Inequalities with Nonlinear Constraints	50
1.6.1 A Modified Basic Scheme for CR Methods	50
1.6.2 Description of the Method	51
1.6.3 Convergence	53
2. Variational Inequalities with Multivalued Mappings	57
2.1 Problem Formulation and Basic Facts	57
2.1.1 Existence and Uniqueness Results	57
2.1.2 Generalized Variational Inequalities and Related Problems	60
2.1.3 Equilibrium and Mixed Variational Inequality Problems	65

2.2	CR Method for the Mixed Variational Inequality Problem ...	72
2.2.1	Description of the Method	72
2.2.2	Convergence	74
2.2.3	Rate of Convergence	77
2.3	CR Method for the Generalized Variational Inequality Problem	80
2.3.1	Description of the Method	80
2.3.2	Properties of Auxiliary Mappings	82
2.3.3	Convergence	83
2.3.4	Complexity Estimates	85
2.3.5	Modifications	92
2.4	CR Method for Multivalued Inclusions	95
2.4.1	An Inexact CR Method for Multivalued Inclusions ...	95
2.4.2	Convergence	97
2.5	Decomposable CR Method	101
2.5.1	Properties of Auxiliary Mappings	102
2.5.2	Description of the Method	104
2.5.3	Convergence	106
3.	Applications and Numerical Experiments	109
3.1	Iterative Methods for Non Strictly Monotone Variational Inequalities	109
3.1.1	The Proximal Point Method	109
3.1.2	Regularization and Averaging Methods	112
3.1.3	The Ellipsoid Method	114
3.1.4	The Extragradient Method	116
3.2	Economic Equilibrium Problems	118
3.2.1	Economic Equilibrium Models as Complementarity Problems	118
3.2.2	Economic Equilibrium Models with Monotone Mappings	119
3.2.3	The Linear Exchange Model	121
3.2.4	The General Equilibrium Model	126
3.2.5	The Oligopolistic Equilibrium Model	128
3.3	Numerical Experiments with Test Problems	133
3.3.1	Systems of Linear Equations	133
3.3.2	Linear Complementarity Problems	134
3.3.3	Linear Variational Inequalities	136
3.3.4	Nonlinear Complementarity Problems	138
3.3.5	Nonlinear Variational Inequalities	140
4.	Auxiliary Results	143
4.1	Feasible Quasi-Nonexpansive Mappings	143
4.1.1	Exterior Point Algorithms	143
4.1.2	Feasible Point Algorithms	145

4.2	Error Bounds for Linearly Constrained Problems	150
4.2.1	Preliminaries	150
4.2.2	Error Bounds	152
4.3	A Relaxation Subgradient Method Without Linesearch	154
4.3.1	Description of the Method	154
4.3.2	Convergence	155
4.3.3	Rate of Convergence	159
