

Contents

1	Introduction	1
2	Forest-Ecosystem Fundamentals	5
2.1	The Forest Ecosystem and Its Environment	5
2.2	Space and Time Scales of Ecosystem Processes	6
2.3	Complexity and Order in Forest Ecosystems	10
2.3.1	Hierarchy Theory	10
2.3.2	Constraints by Higher Hierarchical Levels: Stability	12
2.3.3	Break of Hierarchy: Destabilisation	14
2.4	Process Patterns as Ecological Indicators	16
2.4.1	Buffering Properties of Soil	16
2.4.2	Element Content in Plant Organs and Litter	18
2.4.3	Humus Forms	19
2.4.4	Tree Architecture	19
2.4.5	Input/Output Budgets	23
2.4.6	Forest Structure	25
2.4.7	State Phases of Forest Ecosystems	27
2.5	Stabilising and Destabilising Effects	28
2.5.1	Site Requirements of Tree Species	29
2.5.2	Destabilising Effects	31
2.5.3	Stabilising Effects	33
3	Post-Glacial Development of Climate and Forest Ecosystems	35
3.1	Climate Development	35
3.1.1	Historical Climate Changes	35
3.1.2	Holocene Climate History	39
3.1.3	Twentieth-Century Climate Changes	45
3.2	Vegetation Development	52
3.2.1	General Limits of Forest Growth	52
3.2.2	Historical Patterns of Forest Growth	54
3.2.3	Late-Glacial Forest Emergence	56
3.2.4	Early-Holocene Forest Expansion	56
3.2.5	Middle/Late-Holocene Forest Development	57
3.2.6	The Human Influence	63
3.2.7	Properties and Migration Patterns of Central European Forest Taxa	68
3.3	Post-Glacial Changes in Nutrient Cycling and Soil Conditions	79

4	Sources and Sinks of Greenhouse Gases and Air Pollutants	83
4.1	Overview	83
4.1.1	Controls of Climate Development	83
4.1.2	The Greenhouse Effect	85
4.1.3	Other Atmospheric Perturbations	90
4.2	Carbon Compounds	91
4.2.1	Carbon Reserves and Carbon Cycling	91
4.2.2	Wood-Related Carbon Reserves	94
4.2.3	Carbon Reserves of the Forested Systems	96
4.2.4	Carbon Dioxide	97
4.2.5	Carbon Monoxide	107
4.2.6	Methane	108
4.2.7	Halocarbons	112
4.2.8	Volatile Organic Compounds	113
4.3	Nitrogen and Sulphur Compounds, and O ₃	114
4.3.1	Nitrogen Compounds – an Overview	114
4.3.2	Nitrous Oxide	116
4.3.3	Ozone	119
4.3.4	Acidity: Nitrogen Oxides, NH ₃ , SO ₂	125
4.4	Heavy Metals	136
5	Present State of Forest Ecosystems	141
5.1	Introduction	141
5.2	Forest Soil Condition	142
5.2.1	Acid–Base Condition	142
5.2.2	Soil Organic-Matter Condition	147
5.2.3	Influence of Vegetation, Forest Type and Tree Species on Soil Organic-Matter Storage	153
5.3	Forest Vegetation Condition	157
5.3.1	Forest Area, Growing Stock and Increment	157
5.3.2	Biotic and Abiotic Influences on Timber Stocks and Forest Increments	163
5.3.3	Historical and Current Trends of Forest Damage and Decline . . .	177
5.4	Overall Forest Carbon Reserves	183
6	Implications of Changes in Ambient and Climatic Conditions on Ecosystem Processes	187
6.1	Implications of the Deposition of Acid and Nitrogen	187
6.1.1	Effects of Acid Deposition on Leaves, Soil, Roots and Tree Nutrition	188
6.1.2	Effects on Decomposition	199
6.1.3	Effects on Crown Condition and Increment	201
6.1.4	Effects on Nutrient and Ion Cycles	204
6.1.5	Effects on Stand Development and Ecosystem Renewal	206
6.1.6	Effects on Genetics in Tree Populations	208
6.2	Implications of an Increase in the Atmospheric Carbon Dioxide Content	209

6.2.1	Atmospheric CO ₂ Concentrations in Earth's History and Plant Developmental Responses	209
6.2.2	Plant Responses to CO ₂ Enrichment	211
6.2.3	Interactions of Elevated CO ₂ Levels with Other Growth Factors	221
6.2.4	Effects of Elevated CO ₂ on Soils and Herbivores	230
6.2.5	Ecosystem Responses to Elevated CO ₂	235
6.3	Additional Effects of an Increase in Temperature	239
6.3.1	Immediate Responses to Temperature Changes	239
6.3.2	Response of Seasonal Ecosystem Processes to Temperature and Its Change	243
6.3.3	Responses of Annual Processes and Element Cycling to Temperature Changes	252
6.3.4	Temperature Response of Processes at Higher Scales	263
6.4	Implications of Climatic Changes on the Water Balance	267
6.4.1	Introduction	267
6.4.2	Water Regulation in Plants and Soil	268
6.4.3	Water Relationships at the Ecosystem Level	278
6.4.4	Effects on the Regional Water Balance	281
6.5	Implications of Catastrophic Weather Incidents	284
6.5.1	Introduction	284
6.5.2	Storms	284
6.5.3	Forest Fires	286
6.5.4	Floods	288
6.6	Implications of Increased UV-B Radiation	292
6.6.1	Introduction	292
6.6.2	General Aspects of UV Radiation	293
6.6.3	UV-B Effects on the Plant-Ecophysiological Level	295
6.6.4	UV-B Effects on Herbivores, Pests and Diseases	297
6.6.5	UV-B Effects on Plant Growth	298
6.6.6	UV-B Effects on Ecosystem Development	299
7	Scenarios of Future Changes	301
7.1	Expected Climate Changes	301
7.1.1	Methods of Climate-Evolution Research	301
7.1.2	Temperature	305
7.1.3	Precipitation	308
7.1.4	Other Climatic Parameters	309
7.1.5	Extreme Weather Events	309
7.1.6	Chemical Climate: Critical Levels and Critical Loads of Air Pollutants	312
7.1.7	Climate Feedback from Forests	321
7.2	Expected Soil Changes	322
7.2.1	Soil Moisture	323
7.2.2	Nutrient Status	325
7.3	Modelling Vegetation and Its Development Under Changing Conditions	326

7.3.1	Essentials and Approaches of Environmental Impact Modelling	328
7.3.2	Principal Outcomes of Bioclimatic Model Simulations	341
7.4	Expected Development of Forest Area and Wood Resources	364
7.4.1	Forest Area	364
7.4.2	Forest Growing Stocks	366
7.4.3	Forest-Product Consumption and Needs	369
7.5	Forestry Options for CO ₂ Mitigation	371
7.5.1	General Influences of Forestry on Terrestrial Carbon Reserves	371
7.5.2	Management for Biosystem Carbon Conservation	375
7.5.3	Forestation	376
7.5.4	Management for Fossil-Carbon Substitution	378
7.5.5	Forest-Soil Features	380
7.5.6	Forest-Biomass Features	384
7.6	Trends of Change in Common Forest Ecosystem Types of Central Europe	389
7.6.1	European-Beech Forests	394
7.6.2	Norway Spruce Forests	398
7.6.3	Scots-Pine Forests	404
7.6.4	Mountain-Forest Ecosystems	407
7.6.5	Aspects of Biological Diversity and Adaptation in the Forest Ecosystems	410
8	Forest Management	419
8.1	Introduction	419
8.2	Development of Forest Management in Central Europe	419
8.3	Forest-Management Practices	426
8.3.1	Stand Establishment	427
8.3.2	Tending of Stands	431
8.4	Forest Practice and Management in a European Comparison ...	432
8.4.1	Stand Establishment	432
8.4.2	Tending of Stands	434
8.4.3	Forest-Protection Problems and Future Perspectives	435
8.4.4	Conclusions	435
8.5	Management Strategies to Cope with Forest Decline	436
8.5.1	Tree-Species Selection	438
8.5.2	Forest Breeding	442
8.5.3	Stand Establishment	443
8.5.4	Natural Regeneration	444
8.5.5	Supporting Treatments to Stabilise Site Conditions	445
8.5.6	Silvicultural Methods to Stabilise Forest Stands	446
8.5.7	Tending and Utilisation of Forest Stands	446
8.6	Forest-Management Reactions on Climate Warming	448
8.6.1	Afforestation Opportunities to Influence the Global Carbon Balance	450
8.6.2	Reactions to the Possible Increase in Extreme Climatic Events	451

Contents		XI
8.7	Arguments for a New Orientation of Forest Management	452
8.7.1	Ideas of Nature Conservation	453
8.7.2	Activities of Forest Administrations	455
8.7.3	Conclusions for Future Forest Management	457
9	Human Impacts on Central European Forests:	
	Summary and Conclusions	463
