

Contents

Preface	V
Contents	VII
List of Authors	XV
1 Introduction	1
2 The Impact Pathway Methodology	5
2.1 Guiding Principles in the Development of the ExternE Methodology	5
2.2 Quantification of Impacts	7
2.3 Economic Valuation	9
2.4 Assessment of Uncertainty	9
2.5 Priority Impact Pathways	10
3 Emission Calculation	11
3.1 Road Transport.....	11
3.2 Rail Transport.....	14
3.3 Inland Shipping Transport.....	15
3.3.1 Steady State Operation.....	15
3.3.2 Non Steady State Operation.....	17
3.4 Aircraft Transport.....	18
4 Atmospheric Transport Modelling	21
4.1 Local Scale	21
4.1.1 Gaussian Dispersion Modelling	21
4.1.2 The ROADPOL Model	23
4.1.3 Ozone	24
4.2 Regional Scale	26
4.2.1 Reactive and Non-Reactive Pollutants	26
4.2.2 Ozone	27
4.3 Global Scale (Ozone)	29
4.4 Validation of Dispersion Modelling	30

5	Health Effects: Exposure-Response Functions	35
5.1	Introduction	35
5.2	Summary of Methods	35
5.3	Representation of Particles	37
5.3.1	Should E-R functions for Particles from Transport be Expressed in Terms of PM ₁₀ or PM _{2.5} or Some Other Index? ...	37
5.3.2	Developing E-R Functions Expressed as PM _{2.5} rather than PM ₁₀	38
5.4	The Gaseous Pollutants	38
5.4.1	Ozone	38
5.4.2	SO ₂	39
5.4.3	CO	39
5.4.4	NO ₂	39
5.4.5	Conversion Factors From ppb to Gravimetric Units	40
5.5	E-R Functions for a European Implementation	40
5.5.1	Can the Same Functions be Used throughout Europe, without Serious Error?	40
5.5.2	Transferring E-R Functions from North America	40
5.6	Thresholds	41
5.7	'Chronic' Mortality: Effects as Estimated from Cohort Studies	41
5.7.1	Chronic Mortality and Particles: Is there a Causal Relationship?	42
5.7.2	Choice of Study and E-R Function for Quantification	42
5.7.3	Estimating Years of Life Lost (YOLL)	43
5.7.4	Estimating Costs	44
5.8	Other E-R Functions for the Classical Pollutants	44
5.8.1	Implementation	44
5.8.2	Acute Mortality	44
5.8.3	Respiratory Hospital Admissions	45
5.8.4	Cardiovascular Hospital Admissions	45
5.8.5	Emergency Room Visits (ERVs)	45
5.8.6	Restricted Activity Days (RADs)	45
5.8.7	Acute Effects in Asthmatics	46
5.8.8	Respiratory Symptoms in the General Population	46
5.8.9	Chronic Morbidity in Adults	46
5.8.10	Chronic Morbidity in Children	46
5.9	Additivity across Health Endpoints	46
5.10	Other Pollutants, especially Carcinogens: Methodology	47
5.10.1	Introductory Remarks	47
5.10.2	Objectives of the Evaluation	47
5.10.3	Unit Risk Factors for the Occurrence of Cancer	48
5.10.4	Reliability of Scientific Evidence Underlying URFs	48
5.10.5	The Approach of the US Environmental Protection Agency (EPA)	49

5.11	Summary Evaluations of various Transport-Related Pollutants	49
5.11.1	Benzene	49
5.11.2	1,3 Butadiene	50
5.11.3	Polycyclic Aromatic Hydrocarbons (PAHs)	50
5.11.4	Diesel Exhaust Particulates	51
5.11.5	Formaldehyde	52
5.11.6	Acetaldehyde and Other Aldehydes	52
5.11.7	Ethylene Oxide/ Ethene	52
5.11.8	MTBE (Methyl Tertiary-Butyl Ether)	53
5.11.9	Volatile Organic Compounds (VOCs), as a Mixture	53
5.11.10	Lead	53
5.11.11	Platinum and Related Compounds	54
5.12	Some Remarks on YOLL and Latency	55
5.13	Concluding Remarks	55
6	Impacts on Building Materials	59
6.1	Degradation of Building Materials	60
6.1.1	Damage Mechanisms	60
6.1.2	Dose-Response Functions	62
6.2	Soiling of Building Materials	66
6.2.1	Soiling Mechanisms	66
6.2.2	Dose-Response Functions	67
6.3	Combination of Degradation and Soiling Effects	70
7	Impacts on Terrestrial Ecosystems	73
7.1	Introduction	73
7.2	Impacts Linked to Direct Effects on Ecosystem Structure	73
7.2.1	Loss of Habitat	73
7.2.2	Networks and Habitat Fragmentation	76
7.2.3	Expenditure on Protection of Semi-Natural Habitats	78
7.3	Impacts Linked to Management of the Transport System	79
7.3.1	Roadside Verges and Rail Margins	79
7.3.2	De-Icing	79
7.4	Impacts Linked to Use of the Transport System	80
7.4.1	Impacts on Semi-Natural Vegetation	81
7.4.2	Animal Mortality	85
7.5	Conclusions and Further Information	85
8	Economic Valuation, Sustainability Indicators and Alternative Assessment Techniques	87
8.1	Monetary Valuation: Mortality Risks	87
8.1.1	Background Methodology	87
8.1.2	Empirical Evidence	87
8.1.3	Measurement of the Cost Per Life Saved (CPLS) / Cost Per Life Year Saved (CPLYS)	94
8.2	Discount Rates	95

8.3	Revised Morbidity Values	97
8.3.1	The Helsinki Study.....	97
8.3.2	The 5-Country Study.....	97
8.3.3	Testing for Benefit Transfer (BT) across Countries.....	99
8.3.4	The Strasbourg and Kehl Study	99
8.3.5	New European Estimates of Productivity Loss and Health Services Costs	100
8.3.6	Suggested Revision of Morbidity Estimates	101
8.4	Sustainability Indicators	102
8.4.1	Introduction.....	102
8.4.2	Linking Strong and Weak Sustainability Indicators.....	103
8.4.3	Comparison of the LCA-Method ECO and Monetary Valuation Method CV	103
8.4.4	Decision Rules	104
8.5	Evaluating “Non-Marginal” Changes.....	105
8.5.1	Introduction.....	105
8.5.2	Valuing a Change in Welfare: The Case of a Single Affected Market.....	106
8.5.3	The Indirect Effects of Price Changes.....	107
8.6	General Equilibrium Analysis	109
8.6.1	Introduction.....	109
8.6.2	Computable General Equilibrium (CGE) Models.....	110
8.6.3	Input-Output Models	112
8.6.4	When to Use General Equilibrium Analysis	113
8.6.5	Recommendations	113
8.7	Incorporating Non-Monetised Impacts into the Decision Making Process.....	114
8.7.1	Introduction.....	114
8.7.2	Avoidance Costs	115
8.7.3	Conceptual Framework for Attribute Decision Making.....	116
9	Global Warming	121
9.1	Introduction	121
9.2	Models.....	121
9.2.1	Open Framework.....	121
9.2.2	FUND 1.6.....	122
9.2.3	FUND 2.0.....	123
9.3	Conventions for Valuation and Reporting	124
9.3.1	Discounting	124
9.3.2	Aggregation.....	125
9.4	Carbon Dioxide, Methane and Nitrous Oxide	128
9.5	Uncertainty	130
9.6	Ozone and Sulphate Aerosols.....	133
9.7	Summary of Damage Costs	136
9.8	Avoidance Costs	137

10 Treatment of Up- and Downstream Processes	139
10.1 Life Cycle Assessment (LCA) and Impact Pathway Analysis	139
10.2 Simplified Damage Estimates for LCA	140
10.3 The Uniform World Model	141
10.4 Generalisation to Secondary Pollutants	144
11 Uncertainty	147
11.1 General Remarks	147
11.2 Methodology for Estimating Uncertainties	148
11.3 Placement of the Confidence Intervals	153
11.4 Alternative Hypotheses about Causes	154
11.4.1 The Nature of Particulate Matter	154
11.4.2 A Model for Assessing the Uncertainty Due to Composition of PM	155
11.4.3 Analogies with Smoking	158
11.5 Comprehensive Uncertainty	159
12 Quantification of Total and Average Externalities (Aggregation)	161
12.1 Aggregation Issues	161
12.2 Aggregation of Impacts	163
12.3 Aggregation Methodology	163
12.3.1 Aggregating by Emissions	163
12.3.2 Aggregating by Cost per Kilometre	165
12.3.3 Discussion	165
12.4 Economic Aspects	166
12.5 Conclusions	168
13 Marginal Costs	169
13.1 Belgium	169
13.1.1 Road Transport	169
13.2 Finland	173
13.2.1 Road Transport	173
13.2.2 Rail Transport	175
13.3 France	177
13.3.1 Road Transport	177
13.3.2 Rail Transport	180
13.4 Germany	181
13.4.1 Road Transport	181
13.4.2 Rail Transport	184
13.4.3 Aircraft Transport	186
13.5 Greece	187
13.5.1 Road Transport	187
13.5.2 Marine Transport	191

13.6	The Netherlands	191
13.6.1	Road Transport.....	191
13.6.2	Rail Transport	194
13.6.3	Inland Shipping	195
13.6.4	Aircraft Transport	196
13.7	United Kingdom.....	197
13.7.1	Road Transport.....	197
13.7.2	Rail Transport	198
13.7.3	Aircraft Transport	200
13.7.4	Marine Transport	201
13.8	Results of Marginal Cost Case Studies.....	201
13.8.1	Site-Specific Results	201
13.8.2	Road Transport.....	206
13.8.3	Rail Transport	211
13.8.4	Other Modes.....	212
13.8.5	Costs Including Up- and Downstream Processes.....	214
14	Aggregated Costs	223
14.1	The External Costs of Road Transport in Belgium.....	223
14.1.1	Vehicle Statistics.....	223
14.1.2	Data on External Costs.....	226
14.1.3	Results and Conclusions	227
14.2	The External Costs of Transport in the Netherlands.....	228
14.2.1	Road Transport.....	230
14.2.2	Rail Transport	232
14.2.3	Inland Shipping	233
14.2.4	Aircraft Transport	233
14.2.5	Other Mobile Sources	234
14.2.6	Conclusions.....	234
14.3	The External Costs of Road Transport in the UK.....	235
14.3.1	Road Transport Statistics	236
14.3.2	Road Emission Factors and Damage Costs.....	236
14.3.3	Results.....	237
14.4	The External Costs of Road Transport in the Federal State of Baden- Württemberg, Germany	239
14.4.1	Emission Scenario.....	239
14.4.2	Local Damage Estimation	241
14.4.3	Local Exposure Estimates	242
14.4.4	Classification of Road Network Links	243
14.4.5	Regional Range Impacts	244
14.4.6	Results.....	245
14.5	Conclusions	245

15 Policy Case Studies	247
15.1 Belgium: Do Policies Cope with Transportation Trends?	247
15.1.1 The Evolution of the Total Environmental Costs in Belgium	247
15.1.2 Concluding Remarks	251
15.2 Belgium: Taxation of Transportation Fuels and External Costs per Litre of Fuel	251
15.2.1 External Costs per Litre of Petrol and Diesel	251
15.2.2 Comparing External Air Pollution Costs with Prices and Excises	254
15.3 Finland: Alternative Fuels in Helsinki City Buses	254
15.3.1 Background Data on the Helsinki City Bus Traffic	255
15.3.2 Emission Factors	257
15.3.3 Results	257
15.3.4 Comparison of Total Costs for Diesel and Natural Gas Buses	259
15.3.5 Conclusions	260
15.4 France: Electric versus Conventional Vehicles: Social Costs and Benefits	260
15.4.1 Vehicle Technologies and Costs	261
15.4.2 Emissions and Damage Costs per km	263
15.4.3 Life Cycle Costs/Benefits	264
15.4.4 Conclusions	265
15.5 Germany: Benefits of Introducing CNG-Fuelled Vehicles in the Federal State of Baden-Württemberg	266
15.5.1 Emission Scenarios	266
15.5.2 Implementation and Results	268
15.5.3 Concluding Remarks	269
15.6 Greece: Benefits from Introducing CNG Buses in Athens	269
15.6.1 The Public Transport Network of Athens	269
15.6.2 CNG Buses	270
15.6.3 The Environmental Cost of the Bus Network of Athens	270
15.6.4 Evaluation of the CNG Buses Use	272
15.6.5 Concluding Remarks	274
15.7 A Life Cycle Analysis of Tyres in Western Europe	274
15.8 Spain: Assessment of Environmental Externalities of the Use of Biofuels in Transport in a Mediterranean Region	278
15.8.1 Routes and Vehicle Technologies	279
15.8.2 Bioethanol Introduction Scenario	280
15.8.3 Results	280
15.9 UK: Taxation of Goods Vehicles Compared to Environmental Damage	285
15.9.1 Assessment of External Costs	285
15.9.2 Assessment of Current Fiscal Instruments and Levels	288
15.9.3 Comparison of Duty Levels and Environmental Damage	290
15.10 Summary	292

16 Summary	295
16.1 Emission Calculation.....	295
16.2 Dispersion Modelling.....	296
16.3 Exposure-Response Relationships.....	296
16.3.1 Impacts on Human Health.....	296
16.3.2 Impacts on Building Materials.....	297
16.3.3 Impacts on Terrestrial Ecosystems.....	297
16.4 Economic Valuation.....	299
16.4.1 Mortality Risks.....	299
16.4.2 Morbidity.....	300
16.4.3 Evaluating Non-Marginal Changes.....	300
16.4.4 Incorporating Non-Monetised Impacts into the Decision Making Process.....	300
16.4.5 Overview of Monetary Values Used.....	301
16.5 Global Warming.....	302
16.6 Treatment of Up- and Downstream Processes.....	302
16.7 Uncertainty.....	303
16.8 Marginal Costs of Transport.....	304
16.9 Aggregated Costs.....	308
16.10 Policy Case Studies.....	309
16.11 Outlook.....	311
