Introduction	1
1 Phenomenology of Superplastic Flow	5
1.1 Historical	5
1.2 Mechanical Behaviour of Superplastics	6
1.2.1 Mechanical Tests	6
1.2.2 Typical Experimental Results	7
1.2.3 Conditions for Superplastic Flow	8
1.3 Strain Rate Sensitivity of Superplastic Flow	10
1.3.1 Strain Rate Sensitivity Index, m	10
1.3.2 'Universal' Superplastic Curve	12
1.3.3 Stability of Uniaxial Superplastic Flow	14
1.4 Superplasticity from the Point of View of Mechanics	15
1.4.1 On the Definition of Superplasticity	15
1.4.2 On Experimental Studies Concerning Superplasticity.	17
1.4.3 On the Presentation of Results Obtained	18
1.4.4 On Some Parameters of Superplastic Flow.	20
1.4.4.1 Range of Optimal Flow	20
1.4.4.2 Mechanical Threshold.	20
1.4.4.3 Activation Energies.	22
1.4.4.4 Structure and Mechanical Response	25
1.4.5 On Stability of Superplastic Flow	26
2 Mechanics of Solids	29
2.1 The Subject	30
2.2. Basic Concepts	33
2.2.1 Concept of a Continuum	33
2.2.2 Stress, Strain and Strain Rate States	35
2.3 General Laws and Boundary Value Problems	38
2.4 Mathematical Models of Materials	40
2.4.1 Typical Models for Describing Mechanical Behaviour	40
2.4.2 Mechanical Models/Analogues	42
2.4.3 Theories of Plasticity	49
2.4.4 Theories of Creep	57
2.4.4.1 Phenomenology of Creep	57

2.4.4.2 Internal Variable Approach	63
2.5 Experiments in Mechanics	65
2.5.1 Mechanical Tests on Materials	65
2.5.2 Influence of Testing Machine.	66
3 Constitutive Equations for Superplastics	69
3.1 Basic Requirements of Constitutive Equations.	69
3.2 Phenomenological Constitutive Equations	70
3.2.1 Standard Power Law.	71
3.2.2 Polynomial Models	74
3.2.3. Mechanical Modelling.	76
3.2.3.1 Generalised Maxwell Body	76
3.2.3.2 Generalised Bingham Body	82
3.2.3.3 Mechanical Threshold: Analyses of Karim and Murty	85
3.2.3.4 Smirnov's Mechanical Analogue	90
3.2.3.5 Models of Murty–Banerjee and Zehr–Backofen	91
3.2.3.6 Combinations of Non-Linear Viscous Elements	91
3.2.4 Smirnov's Model	99
3.2.5 Anelasticity	101
3.2.6 Kinks on the Load Relaxation Curves	103
3.2.7 Mechanistic Model	105
3.2.8 Activation Energies	105
3.3 Physical Constitutive Equations	111
3.3.1 Classical Models	112
3.3.2 Modern Theories	114
3.3.2.1 Model of Ghosh	114
3.3.2.2 Model of Hamilton	115
3.3.2.3 The Model of Pschenichniuk–Astanin–Kaibyshev	116
3.3.2.4 The Model of Perevezentsev et al.	118
3.4 Construction of Constitutive Equations.	119
3.4.1 Common Scheme	119
3.4.2 Model of Padmanabhan and Schlipf	120
3.5. Constitutive Equations in Tensor Form	133
3.5.1 Non-Uniaxial Stress–Strain States	133
3.5.2 Some Tensor Constitutive Equations.	137
3.6 Material Constants from Technological Tests	138
3.6.1 Inverse Problems	139
3.6.2 Constant Pressure Forming of a Rectangular Membrane	141
3.6.3 Constant Pressure Forming of a Circular Membrane	146
3.6.4 Model of Padmanabhan and Schlipf	146
4 Boundary Value Problems in Theory of Superplastic Metalworking	149
4.1 General Formulation of the Boundary Value Problem for Metalworking Processes	149

4.1.1 Basic Concepts and Principal Equations.	149
4.1.2 Initial and Boundary Conditions.	151
4.1.3 Damage Accumulation	157
4.2 Model Boundary Value Problems in Mechanics of Superplasticity	162
4.2.1 Couette Flow of Superplastics	162
4.2.1.1 Newtonian Viscous Liquid	165
4.2.1.2 Shvedov–Bingham Plastic	166
4.2.1.3 Non-Linear Viscous Material	166
4.2.2 Combined Loading of a Cylindrical Rod by Axial Force and Torque	167
4.2.3 Free Bulging of Spherical and Cylindrical Shells	174
4.2.3.1 Free Forming of a Sphere	174
4.2.3.2 Free Forming of an Infinite Cylindrical Shell	176
4.3 Numerical Solving of Boundary Value Problems in Superplasticity	178
4.3.1 Features of Boundary Value Problems in Mechanics of Superplasticity	178
4.3.2 Finite Element Modelling of Superplastic Metalworking Processes	179
4.3.3 Numerical Models of Superplastic Sheet Forming Processes .	185
4.3.3.1 Principal Equations of Membrane Theory	186
4.3.3.2 Numerical Solutions of the Principal Equations of Membrane Theory	188
5 Mathematical Modelling of Superplastic Metalworking Processes	195
5.1 Modelling of Superplastic Bulk Forming Processes	195
5.1.1 General Comments	195
5.1.2 Compression of a Disc using Platens.	197
5.1.3 Forging of a Disc by Rotating Dies	199
5.1.3.1 Formulation of the Simplified Boundary Value Problem .	199
5.1.3.2 Solving the Simplified Boundary Value Problem	201
5.1.3.3 Analysis of the Solution Obtained	204
5.1.4 Extrusion	205
5.1.5 Die-less Drawing	206
5.1.6 Roll Forming Processes	208
5.1.7 Clutching	213
5.2 Modelling of Sheet Metal Processes	213
5.2.1 Simplifications in Modelling SPF and SPF/DB Processes . .	215
5.2.2 Main Challenges in Modelling SPF and SPF/DB Processes .	216
5.2.3 SPF of Hemispherical Domes	217
5.2.3.1 Finite Strain Behaviour	218
5.2.3.2 Jovane's Model	219
5.2.3.3 Geometric /Kinematic Models.	221
5.2.3.4 Model of Cornfield–Johnson and its Modifications . . .	225
5.2.3.5 Holt's Model and its Modifications.	226
5.2.4 Free Forming of Spherical Vessels.	228

5.2.4.1 Description of the Process	228
5.2.4.2 Mathematical Model	228
5.2.4.3 Wrinkling in Superplastic Forming	230
5.2.5 SPF of a Long Rectangular Membrane	232
5.2.5.1 Thickness Distribution	232
5.2.5.2 Pressure–Time Cycle	234
5.2.5.3 Comparison with Experimental Results	236
5.2.6 Estimating Strain in SPF and SPF/DB Processes	241
5.3 Deformation Processing of Materials	243
5.3.1 General Notes	243
5.3.2 Torsion under Pressure and ECA Extrusion	244
5.3.3 Thermomechanical Conditions for Grain Refinement.	246
5.3.4 On Some Principles of Structure Refinement	247
6 Problems and Perspectives	251
6.1. Influence of Strain History on Evolution of Structure	253
6.2. Constitutive Equations Including Structural Parameters	258
6.3. The Concept of Database ‘TMT–Structure–Properties’	262
6.4. Challenges in Mechanics of Superplasticity	265
6.4.1. Experimental Superplasticity	265
6.4.2. Constitutive Equations	267
Appendix A: Finite Strain Kinematics of Solids	269
A.1 Basic Concepts	269
A.2 Theory of Deformations	272
A.2.1 Strain Tensors	272
A.2.2 Geometrical Sense of Strain Tensor Components.	273
A.2.3 Method of Determining the Principal Components of a Strain Tensor	274
A.2.4 Volumetric and Deviatoric Parts of Strain Tensors	276
A.3 Strain Rate Tensor	277
A.3.1 Covariant Components of Strain Tensor	277
A.3.2 Distortion and Spin Tensors.	278
A.3.3 Strain Rate Tensor Invariants	279
A.3.4 Volumetric and Deviatoric Parts of the Strain Rate Tensor	280
A.3.5 On Some Scalar Characteristics of a Deformed State	281
Appendix B: Kinematics of Some Simple Deformation Modes.	283
B.1 Tension/Compression of a Cylindrical Rod.	283
B.2 Simple Shear	291
B.3 Pure Shear	295
B.4 Bulging of a Sphere	300
B.5 Finite Strain Kinematics under Combined Loading of a	

Cylindrical Rod by Axial Force and Torque.	302
Appendix C: On Dimensional Analysis	311
C.1 Basic Concepts	311
C.2 Viscous Flow	313
C.3 Non-Newtonian Flow	315
C.4 Superplastic Flow	316
C.5 Dimensionless Parameters for the Boundary Value Problem of Superplasticity	316
C.6 Physical Modelling of Superplastics.	323
Appendix D: Group Properties of Thermoviscoplasticity	325
D.1 About Single-Parameter Groups of Transforms	325
D.2 Applications of Group Methods in Superplasticity	328
References	331
Index	359

Superplastic Flow

Phenomenology and Mechanics
