Foreword VII

Preface..... IX

List of Authors XI

I Methodology of Technology Assessment 1

1 Participatory Technology Assessment. Some Critical Questions
Carl Friedrich Gethmann 3

1.1 The Tribalisation of Science 5

1.2 The Overtaxing of the Citizens’ Competence..... 7

1.3 The Plebiscitarism of the Will of the People 8

1.4 Final Remarks 11

2 Post-Normal Science. Science and Governance under Conditions of Complexity
Silvio Funtowicz, Jerry Ravetz 15

2.1 Introduction 15

2.2 Complexity 16

2.3 Post-Normal Science as a bridge between complex systems and policy..... 18

2.4 Conclusion 23

3 Business as Usual: On the Prospects of Normality in Scientific Research
Martin Carrier..... 25

3.1 Lack of selectivity of the suggested features 25

3.2 Methodological irrelevance of the listed properties 27

3.3 The perpetuity of Post-Normal Science 29

3.4 The non-existence of normal science 30

4	Rational Technology Assessment as Interdisciplinary Research <i>Michael Decker, Armin Grunwald</i>	33
4.1	Overview	33
4.2	Technology Assessment as problem-oriented research	33
4.3	The Concept of Rationality in Technology Assessment	36
4.3.1	The pragmatic concept of rationality	37
4.3.2	Dimensions of rationality	39
4.3.3	Practical rationality for shaping the future	40
4.4	Quality requirements for interdisciplinary Technology Assessment	42
4.5	External quality assurance within interdisciplinary expert groups	47
4.5.1	Pre-Project: Pre-structuring the problem field	48
4.5.2	Project	51
4.5.3	Evaluation Loops	53
4.6	Discussion	56
4.6.1	The interdisciplinary procedure	56
4.6.2	Trans-disciplinary quality of TA?	58
5	To assess rationality before anything else. A remark on the legitimacy of Rational Technology Assessment <i>Rob P. B. Reuzel</i>	61
5.1	A brief history of Technology Assessment	61
5.2	Rational Technology Assessment and the assumption behind “rationality”	64
5.3	Habermas on decisionistic, technocratic and pragmatistic models	65
5.4	Rational Technology Assessment and its legitimacy	67
II	Technology Assessment as Policy Consulting	71
6	Parliament, Paradox and Policy <i>David Cope</i>	73
6.1	Introduction	73
6.2	First paradox: ‘The Paradox of Parliamentary Democracy’	75
6.3	Second paradox: ‘Science, Technology and the Public’	76
6.4	Policy consulting in contemporary context	77
6.5	Some policy consultation experiences of POST	79
6.5.1	‘Electronic’	79
6.5.2	‘Non-electronic’	79
6.6	Criticisms of consultative techniques	81
6.7	Conclusion	82

7	The Politics of Technology Assessment. <i>Miltos Liakopoulos</i>	85
7.1	Introduction	85
7.2	Parliamentary offices of TA: the limits	85
7.3	Interdisciplinarity and Consensus: possible, desirable or simply necessary?	87
7.4	Trust: ubiquitous by its absence	89
7.5	In Conclusion	91

III Participatory Technology Assessment 93

8	Toward "lay" participation and co-operative learning in TA, technology policy, and construction of technologies <i>Imre Hronszky</i>	95
8.1	Remarks on the historical development of TA	96
8.2	TA as a democratic requirement, types of democracy and "tech- nological citizenship"	108
8.3	Cognitive preconditions to develop and practice "technological citizenship"	113
9	The Role of Scientific Input and Public Participation for Technology Assessment <i>Ortwin Renn</i>	123
9.1	Introduction	123
9.2	Forms of Legitimization for Collective Actions	125
9.3	Pitfalls and Illusions in the Cooperation between Experts and Policy Makers	128
9.4	The Challenge of Integrating Expertise into Technological Policy-Making	130
9.4.1	The ambivalent role of science for legitimizing decisions on TA	130
9.4.2	Lessons for the function of science for Technology As- sessment	131
9.5	The Requirements for a Model Linking Expertise to Technol- ogy Assessment	133
9.6	The Necessity of Discursive Processes when Dealing with Tech- nological Impacts	135
9.7	Classification of Discourses	136
9.8	Concluding Remarks	137

IV Case Studies 145

10 The Ethics of Technology Assessment in Health Care <i>Albert J. Jovell</i>	147
10.1 Health Technology Assessment	147
10.1.1 The definition	147
10.1.2 The method	148
10.1.3 The health outcomes	150
10.2 Health systems in transition	154
10.2.1 Social change in health care	154
10.2.2 Challenges for Health Technology Assessment	155
10.3 Knowledge management	158
10.3.1 The knowledge based system of care	158
10.3.2 Dissemination of knowledge	159
10.3.3 Ethics and knowledge in health care	161
11 Transition Management: a promising policy perspective <i>Jan Rotmans, René Kemp, Marjolein van Asselt</i>	165
11.1 Origin and nature of the concept of transition	165
11.2 Integrated systems and evolutionary approach	168
11.3 Example: energy transition in historical perspective	173
11.4 Transition Management	176
11.5 Transition Management in relation to the current policy	181
11.6 Actor analysis: the role of the government	183
11.7 Case study: the transition to a low-emissions energy infra- structure	185
11.8 Conclusions	193
12 The Inclusion of Stakeholder Perspectives in Integrated Assessment of Climate Change <i>Jeroen van der Sluijs, Penny Klopprogge</i>	199
12.1 Introduction	199
12.2 Motives for including stakeholder perspectives	200
12.3 Methods to include stakeholder perspectives	202
12.3.1 Whose perspectives have been involved?	203
12.3.2 In what phase of the process have stakeholder perspec- tives been involved?	206
12.3.3 How have stakeholder perspectives been included?	208
12.3.4 Who has effectively been allowed to contribute what relevant wisdom in what phase of the risk management process?	211
12.4 Discussion and conclusions	212
12.5 Acknowledgements	214

Interdisciplinarity in Technology Assessment
Implementation and its Chances and Limits

Decker, M. (Ed.)

2001, XX, 217 p. 11 illus., Hardcover

ISBN: 978-3-540-42792-6
