Structure and Interactions of Lipid Bilayers:

Role of Fluctuations

| | |
|--|----|
| John F. Nagle and Stephanie Tristram-Nagle | 1 |
| 1 Introduction | 1 |
| 2 Structure | 3 |
| 2.1 Levels of Description of Structure | 3 |
| 2.2 Problem with the Gravimetric Method | 5 |
| 2.3 Electron Density Profile Method | 6 |
| 2.4 Why Are there so Few Orders of Diffraction? | 8 |
| 2.5 Liquid Crystallography | 9 |
| 2.6 Structural Results | 11 |
| 2.7 Absolute Electron Density Profiles | 13 |
| 3 Interactions Between Bilayers | 14 |
| 3.1 Hard versus Soft Confinement Regimes | 14 |
| 3.2 Experimental Window on the Fluctuation Force | 16 |
| 3.3 Simulations | 17 |
| 3.4 Determination of Interaction Parameters | 19 |
| 4 Concluding Remarks | 19 |
| References | 20 |

Aligned Lipid–Water Systems

| | |
|---|----|
| John Katsaras and V. A. Raghunathan | 25 |
| 1 Introduction | 25 |
| 2 The Subgel Phase of DPPC Multibilayers | 26 |
| 3 In-Plane Structure of the Gel Phase | 30 |
| 4 The Ripple Phase | 31 |
| 5 Hydration, Aligned Lipid Systems and the Vapour Pressure Paradox | 34 |
| 6 Magnetically Alignable Lipid ‘Substrates’ | 37 |
| 7 Concluding Remarks | 38 |
| References | 39 |

Conformations of Fluid Lipid Membranes

| | |
|---|----|
| Beate Klösgen | 47 |
| 1 Introduction | 47 |
| 2 Features of the Fluid Bilayer State | 48 |
| 2.1 Dynamics of Membranes | 49 |
| 2.2 Phases of Lipids | 54 |
| 2.3 Lipid Vesicles | 57 |
| 2.4 Interaction of Membranes | 61 |
| 3 Superstructures of the Fluid Lamellar Phase | 65 |
| 3.1 Dark Bodies and Dispersive Phase | 67 |
| 3.2 Saddle Structures in Extended Membranes | 70 |
| 3.3 Infinite Swelling of Uncharged Membranes | 73 |
| 4 Concluding Remarks | 77 |
| References | 79 |

Molecular Dynamics Simulation of Phospholipid Bilayers

| | |
|---|-----|
| Scott Feller | 89 |
| 1 Introduction | 89 |
| 2 Overview of Molecular Dynamics Simulation | 90 |
| 2.1 Potential Energy Functions | 90 |
| 2.2 Equations of Motion | 95 |
| 2.3 Summary | 96 |
| 3 Determination of Lipid Component Volumes | 97 |
| 3.1 Method of Calculation | 97 |
| 3.2 Phosphatidylcholine Fragment Volumes | 99 |
| 3.3 Interpretation of Diffraction Data | 100 |
| 4 Concluding Remarks | 104 |
| References | 105 |

New Insights into Biomembrane Structure from Two-Dimensional Nuclear Overhauser Enhancement Spectroscopy

| | |
|--|-----|
| Daniel Huster and Klaus Gawrisch | 109 |
| 1 Introduction | 109 |
| 2 NOESY NMR and Lipid Membranes | 111 |
| 3 Spin Diffusion in the Lipid Matrix | 115 |
| 4 Cross-Relaxation Rates and Molecular Disorder | 117 |
| 5 Lateral Membrane Organization in Complex Lipid Mixtures | 119 |
| 6 Concluding Remarks | 120 |
| References | 122 |

X-ray and Neutron Scattering Studies of Lipid Monolayers and Single Bilayers

Gregory S. Smith and Jaroslaw Majewski 127

| | | |
|-----|--|-----|
| 1 | Introduction | 127 |
| 2 | X-ray and Neutron Techniques for Studying Lipids at the Air–Water, Solid–Air, and Solid–Liquid Interfaces | 127 |
| 2.1 | Reflectometry | 128 |
| 2.2 | Grazing Incidence Diffraction (GID) | 131 |
| 3 | The Structure of Lipid Layers | 132 |
| 3.1 | The Langmuir Technique and Lipid Monolayers | 133 |
| 3.2 | Pure Lipid Monolayers | 134 |
| 3.3 | Single Lipid Bilayers | 140 |
| 3.4 | Mixed Lipid Monolayers | 142 |
| 4 | Concluding Remarks | 144 |
| | References | 145 |

Direct Determination of Biomembrane Structures

Douglas L. Dorset 149

| | | |
|---|--|-----|
| 1 | Introduction | 149 |
| 2 | Early Determinations of Phospholipid Bilayer Structures | 150 |
| 3 | Direct Determination of Crystallographic Phases | 151 |
| 4 | Possible Structure-Based Constraints on Phase Determination | 154 |
| 5 | X-Ray Structure Analyses of Lipid Bilayers – the Use of Direct Methods | 155 |
| 6 | Direct Phasing in the Electron Crystallography of Phospholipid Bilayers | 156 |
| 7 | The Ripple Phase of Hydrated L-DMPC | 157 |
| 8 | Direct Phase Determination of Integral Membrane Proteins | 158 |
| 9 | Concluding Remarks | 159 |
| | References | 160 |

X-ray Diffraction Studies on the Effect of Additives on the Phase Behaviour of Lipids

Gert Rapp, Sergio S. Funari, Frank Richter and David Woo 165

| | | |
|-----|---------------------------------------|-----|
| 1 | Introduction | 165 |
| 2 | Polymorphism of Amphiphiles | 166 |
| 2.1 | Structure Determination | 167 |
| 3 | Hydrophilic Additives | 168 |
| 3.1 | Salts | 168 |
| 3.2 | Saccharides | 171 |
| 3.3 | Lipid/PEG Conjugates | 172 |
| 3.4 | Lipid/DNA Complexes | 174 |

XII Contents

| | | |
|-----|---|-----|
| 4 | Hydrophobic Additives | 175 |
| 4.1 | Sterols | 175 |
| 4.2 | Alkanes | 176 |
| 5 | Amphiphilic Molecules | 177 |
| 5.1 | Surfactants | 177 |
| 5.2 | Fatty Acids | 180 |
| 6 | Interaction of Peptides with Membranes | 182 |
| 7 | Effect of Lipases on the Polymorphism of Lipids | 182 |
| 8 | Concluding Remarks | 183 |
| | References | 183 |

**Peptides in Lipid Bilayers: Determination of Location
by Absolute-Scale X-ray Refinement**

| | | |
|-----|--|-----|
| | Stephen H. White and Kalina Hristova | 189 |
| 1 | Introduction | 189 |
| 2 | Fluid-Bilayer Structure Determination Issues | 189 |
| 3 | Absolute Scale Refinement Method | 192 |
| 3.1 | Overview | 192 |
| 3.2 | Per-Lipid Scattering-Density Profiles of Bilayers Containing Peptide (Step 1) | 194 |
| 3.3 | Modeling the Peptide-Perturbed Bilayer Structure (Step 2) .. | 195 |
| 3.4 | Finding the Best Gaussian Transbilayer Distribution of the Peptide (Step 3) | 196 |
| 3.5 | Modeling the Peptide Conformation, Position, and Orientation (Step 4) | 196 |
| 4 | Validating the Structure Refinement | 199 |
| 5 | Disposition of Ac-18A-NH ₂ in DOPC Bilayers | 200 |
| 6 | Concluding Remarks | 201 |
| | References | 203 |

**Solid State NMR Approaches to the Study
of Membrane Proteins in Magnetically Aligned
Model Membranes**

| | | |
|-----|---|-----|
| | R. Scott Prosser and Charles R. Sanders, II | 207 |
| 1 | Introduction | 207 |
| 2 | General Features of Bicelles and Parallel-Aligned Model Membranes | 209 |
| 3 | Sample Preparation and Reconstitution Strategies | 213 |
| 4 | Experimental Techniques | 215 |
| 4.1 | Orientational and Structural Information | 217 |
| 4.2 | Resolution, Acquisition and Assignment of Multidimensional Spectra | 219 |
| 5 | Scaling Order in Bicelles and Lanthanide-Doped Bilayers | 224 |
| 6 | Concluding Remarks | 225 |
| | References | 226 |

Liposome Phase Systems as Membrane Activity Sensors for Peptides

Peter Laggner and Karl Lohner 233

| | | |
|---|---|-----|
| 1 | Introduction | 233 |
| 2 | Models for Peptide–Lipid Interactions and Cell Membrane Disruption | 234 |
| | 2.1 Relevance of Phase-Diagram Mapping | 235 |
| 3 | Physico-Chemical Methods to Probe Membrane Activity | 237 |
| | 3.1 X-ray and Neutron Diffraction | 238 |
| | 3.2 Thermodynamic Methods | 241 |
| 4 | Lytic Peptides: Melittin and δ -Lysin | 242 |
| 5 | Antimicrobial Peptides | 252 |
| 6 | Concluding Remarks | 259 |
| | References | 259 |

Fusion and Rupture of Lipid Model Membranes

Toon Stegmann, Justin Teissie and Mathias Winterhalter 265

| | | |
|---|--|-----|
| 1 | Introduction | 265 |
| 2 | Liposomal Fusion | 265 |
| 3 | Rupture of Lipid Membranes | 268 |
| 4 | Electric Fields as a Tool to Induce Fusion or to Modify Membrane Permeability | 273 |
| 5 | Fusion Mediated by Proteins | 278 |
| 6 | Concluding Remarks | 282 |
| | References | 282 |

Index 289

Lipid Bilayers

Structure and Interactions

Katsaras, J.; Gutberlet, T.

2001, XVIII, 296 p., Hardcover

ISBN: 978-3-540-67555-6
