0. Foliations on 2-Manifolds	1
0.1 Notations	1
0.2 Examples	3
0.2.1 Smooth Functions	3
0.2.2 1-Forms	4
0.2.3 Line Elements	5
0.2.4 Curvature Lines	6
0.2.5 A-Diffeomorphisms	7
0.3 Constructions	10
0.3.1 Suspension	10
0.3.2 Measured Foliations	11
0.3.3 Affine Foliations	14
0.3.4 Labyrinths	15
0.3.5 Gluing Together	16

Part I. General Theory

1. Local Theory	21
1.1 Introduction	21
1.2 Symmetry	22
1.3 Normal Forms	22
1.3.1 Typical Normal Forms	22
1.3.2 Degenerate Normal Forms	24
1.4 Structurally Stable Singularities	28
1.4.1 Blowing-up Method	28
1.4.2 Fundamental Lemma	30
1.4.3 Classification	33
1.5 Bifurcations	34

2. Morse–Smale Foliations	37
2.1 Rough Foliations	37
2.1.1 Main Theorem	37
2.1.2 Structural Stability	38
2.1.3 Density	42
2.2 Classification of Morse–Smale Foliations	43
2.2.1 Rotation Systems	43
2.2.2 Equivalence Criterion	47
2.2.3 Realization of the Graphs	50
2.2.4 Example	52
2.3 Gradient–like Foliations	53
2.3.1 Lyapunov Function	53
2.3.2 Lyapunov Graph	56
2.4 Connected Components of Morse–Smale Foliations	57
2.5 Degrees of Stability	59
3. Foliations Without Holonomy	67
3.1 Periodic Components	67
3.2 Quasiminimal Sets	68
3.2.1 Structure of a Quasiminimal Set	69
3.2.2 Blowing–Down	73
3.3 Decomposition	81
3.4 Surgery	86
3.4.1 Surgery of Labyrinths	86
3.4.2 Surgery of Measured Foliations	94
3.5 Number of Quasiminimal Sets	104
3.6 Application: Smoothing Theorem	117
4. Invariants of Foliations	125
4.1 Torus	125
4.1.1 Minimal Foliations	125
4.1.2 Foliations With a Cantor Minimal Set	131
4.1.3 Foliations With Cherry Cells	135
4.1.4 Analytic Classification	138
4.2 Homotopy Rotation Class	144
4.2.1 Surfaces of Genus $g \geq 2$	144
4.2.2 Classification	148
4.2.3 Properties of the Homotopy Rotation Class	155
4.3 Non Orientable Surfaces	156
4.3.1 Torus With the Cross-Cap	156
4.3.2 Surfaces of Genus $p \geq 4$	157
4.4 Discrete Invariants	157
4.4.1 Regular Foliations on the Sphere	157
4.4.2 Orbit Complex	158
4.5 Foliations Without Holonomy	160

4.5.1	Cells	161
4.5.2	Classification of Elementary Cells	161
4.5.3	Amalgamation of Elementary Cells	162
4.5.4	Conley-Lyapunov-Peixoto Graph	164
4.5.5	Classification	165
4.6	Foliations With Symmetry	167
4.6.1	Cayley Graph	167
4.6.2	Isomorphism	169
4.6.3	Realization	170
4.7	Homology and Cohomology Invariants	171
4.7.1	Asymptotic Cycles	172
4.7.2	Fundamental Class	175
4.7.3	Cycles of A. Zorich	178
4.8	Smooth Classification	182
4.8.1	Torus and Klein Bottle	182
4.8.2	Surfaces of Genus $g \geq 2$	184
5.	Curves on Surfaces	191
5.1	Curves and the Absolute	191
5.1.1	Notations	191
5.1.2	Background	192
5.1.3	Proof of Weil's Conjectures	194
5.1.4	Theorems of D. V. Anosov	195
5.2	Asymptotic Directions	197
5.2.1	Of Recurrent Semi-Trajectory	197
5.2.2	Of Analytic Flow	198
5.2.3	Of Foliation	199
5.2.4	Of Curves With Restriction on the Geodesic Curvature	199
5.3	Approximation of a Curve	200
5.4	Limit Sets at the Absolute	202
5.5	Geodesic Deviation	203
5.5.1	Deviation Property of Trajectories	203
5.5.2	Deviation From the Geodesic Framework	206
5.5.3	Ramified Coverings	207
5.5.4	Swing of Trajectories	209
5.6	Unbounded Deviation	213
5.6.1	Surfaces of Genus $g \geq 2$	213
5.6.2	Irrational Direction on Torus	215
5.6.3	Rational Direction on Torus	216
5.7	Family of Curves	216

6. Non-compact Surfaces	223
6.1 Foliations in the Plane	223
6.1.1 Non Singular Case.....	223
6.1.2 Singular Case	225
6.1.3 Level Set of Harmonic Functions	227
6.2 Structural Stability	230
6.3 Examples.....	232
6.3.1 Depth of the Centre	232
6.3.2 Minimal Sets	233
6.3.3 Minimal Flows	235
6.3.4 Transitive Flows	236

Part II. Applications

7. Ergodic Theory	241
7.1 Notations	241
7.2 Existence of Invariant Measures	242
7.2.1 Liouville's Theorem.....	242
7.2.2 Torus	244
7.2.3 Surfaces of Genus $g \geq 2$	246
7.3 Ergodicity	247
7.3.1 Torus	247
7.3.2 Surfaces of Genus $g \geq 2$	251
7.4 Mixing	251
7.4.1 Torus	252
7.4.2 Surfaces of Genus $g \geq 2$	255
7.5 Entropy	256
8. Homeomorphisms of the Unit Circle	261
8.1 Denjoy Flow	261
8.2 Cherry Class.....	263
8.2.1 Cherry Example.....	263
8.2.2 Flows With One Cell	265
8.2.3 Flows With Several Cells	270
8.3 Foliations on the Sphere	281
8.3.1 Notations	281
8.3.2 Main Result	283
8.3.3 Application to the Labyrinths	288
8.3.4 Appendix: The Dulac Functions.....	288
8.4 Addendum: Bendixson's Theorem	291

9. Diffeomorphisms of Surfaces	295
9.1 A-diffeomorphisms	295
9.1.1 Attractors of R. V. Plykin	295
9.1.2 One-Dimensional Basic Sets on the Sphere	296
9.1.3 Surfaces of Genus $g \geq 1$	297
9.2 Singularity Data	298
9.3 Isotopy Classes of Diffeomorphisms	300
10. C*-Algebras	305
10.1 Irrational Rotation Algebra	305
10.1.1 Dimension Groups	305
10.1.2 Continued Fractions	307
10.1.3 Effros-Shen's Theorem	308
10.1.4 Projections of A_α	309
10.1.5 Morita Equivalence	310
10.1.6 Embedding of A_α	312
10.2 Artin Rotation Algebra	313
10.2.1 Approximationssatz	313
10.2.2 Artin Numbers	315
10.2.3 Applications	322
10.3 K-Theory	324
10.3.1 Foliation With Reeb Components	326
10.3.2 Baum-Connes Conjecture	326
10.4 C*-Algebras of Morse-Smale Flows	328
11. Quadratic Differentials	331
11.1 Notations	331
11.2 Local Theory	331
11.2.1 Normal Forms	331
11.2.2 Finite Critical Points	334
11.2.3 Pole of Order 2	335
11.2.4 Higher Order Poles	336
11.3 Global Behaviour of the Trajectories	337
12. Flat Structures	341
12.1 Flat Metric With Cone Singularities	341
12.1.1 Notations	341
12.1.2 Classification of Closed Flat Surfaces	343
12.2 Connection With Quadratic Differentials and Measured Foliations	345
12.3 Rational Billiards	346
12.4 Veech Dichotomy	348

13. Principal Curvature Lines	353
13.1 Local Theory	353
13.1.1 Notations	353
13.1.2 Invariants of the 2-Jets	354
13.1.3 Stability Lemma	356
13.1.4 Classification of Simple Umbilics	360
13.2 Carathéodory Conjecture	364
13.2.1 Notations	364
13.2.2 φ -Geodesics	365
13.2.3 CMC-Surfaces	367
13.2.4 Proof of Theorem 13.2.1	368
13.3 Elements of Global Theory	371
13.3.1 Structural Stability	371
13.3.2 Bifurcation of Umbilical Connections	372
14. Differential Equations	375
14.1 Characteristic Curve	375
14.1.1 Background and Notations	375
14.1.2 Theorem of Hartman and Wintner	376
14.2 Classification	378
14.2.1 Generic Singularities	378
14.2.2 Theorem of A. G. Kuzmin	379
15. Positive Differential 2-Forms	383
15.1 Notations	383
15.2 Local Theory	384
15.2.1 Normal Forms	384
15.2.2 Classification	386
15.3 Space of Forms	388
15.3.1 Stable Subspace	388
15.3.2 Theorem of V. Guinez	388
16. Control Theory (by B. Piccoli)	391
16.1 Introduction	391
16.2 Optimal Control	392
16.3 Optimal Flows	393
16.4 Generic Optimal Flows on the Plane	395
16.5 Optimal Flows on 2-Manifolds	397

Part III. Appendix

17. Riemann Surfaces	401
17.1 Uniformization Theorem	401
17.2 Discrete Groups	403
17.2.1 Möbius Transformations	403
17.2.2 Fuchsian Group	406
17.2.3 Limit Set of Fuchsian Groups	408
17.2.4 Modular Group	410
17.2.5 Examples	411
17.3 Teichmüller Space	412
17.3.1 Conformal Invariants	412
17.3.2 Quasiconformal Mappings	413
17.3.3 Beltrami Equation	414
17.3.4 Ahlfors-Bers' Theorem	415
17.3.5 Geometry of Quadratic Differentials	416
17.3.6 Associated Metric	418
17.3.7 Isothermal Coordinates	420
17.4 Complex Curves	421
17.4.1 Projective Curves	421
17.4.2 Degree-Genus Formula	424
17.4.3 Elliptic Curves	425
17.4.4 Divisors and the Riemann-Roch Theorem	427
17.4.5 Application: Dimension of the Teichmüller Space	429
Bibliography	431
Index	447
