

Contents

Part I Introduction and Background

1. Introduction	3
2. Thermodynamics	7
2.1 Some Definitions	7
2.2 The Principles of Thermodynamics	8
2.3 Internal Energy	9
2.4 Other Thermodynamic Functions; Maxwell's Relations	10
2.5 Work and Equilibrium	13
2.6 Integrated Equations	16
2.7 Chemical Potentials and Supersaturation	17
2.7.1 Supersaturated Vapor (Ideal Gas)	18
2.7.2 Supersaturated Solution	18
2.7.3 Undercooled Condensed Phase	19
2.8 The "Surface Phase"	19
3. Statistical Thermodynamics	23
3.1 Partition Functions; General	23
3.2 Partition Function in a Continuum Phase Space	24
3.3 Examples of Simple Partition Functions	26
3.3.1 Translational Motion	26
3.3.2 Harmonic Oscillator	26
3.3.3 Free Rotation	30
3.4 Canonical Partition Functions of Pure Phases; Free Energy and Chemical Potential	32
3.4.1 The Ideal Gas	32
3.4.2 The "Lattice Gas"	32
3.4.3 The Monatomic Einstein Crystal	33
3.4.4 The One-Dimensional Non-Einstein Crystal	34
3.5 Partition Function of Associated Vapor	38

Part II Equilibria

4. Equilibrium Between Large Phases; The Vapor Pressure of Solids	43
4.1 The Clausius–Clapeyron Equation	43
4.2 Statistical-Thermodynamic Treatment	45
4.3 Repetitive-Step; Thermodynamic Frequency	45
4.4 Kinetic Treatment of the Equilibrium Crystal-Vapor	49
4.5 Equilibrium in the Different Sites on the Crystal Surface	51
4.6 Adsorbed and Incorporated Molecules; the Different Types of Crystal Face	55
5. The Surface Tension of Crystals	61
5.1 The Broken-Bond Approach to the Surface Energy of a Solid: the Born–Stern Procedure	61
5.2 Surface Stress	65
5.3 Interfacial Tension	67
5.4 Stefan’s Rule	70
6. Equilibrium Between Large Three- and Two-Dimensional Phases: Adsorption Phenomena	73
6.1 Partition Function and Chemical Potential of an Adsorbed Layer	73
6.1.1 The Ising Model	75
6.1.2 The Mean Field Approximation	77
6.2 Desorption Work	78
6.3 Frumkin–Fowler’s Adsorption Isotherm	79
6.4 Multilayer Adsorption	84
6.5 Two-Dimensional Phase Transitions; Spreading Pressure	88
6.6 Two-Dimensional <i>Versus</i> Three Dimensional Phases; a Link to Wetting	93
6.7 Displacement and Mixing of Condensed Two-Dimensional Phases	94
7. Thin Films, Surface Roughening, and Surface Alloys	103
7.1 Chemisorbed <i>Versus</i> Physisorbed Layers; Thin Solid Films	103
7.2 Surface Roughness Considered as a Special Case of Adsorption	106
7.3 Adsorption on a Thermally Rough Substrate: Surface Alloying	113
7.4 Surface Melting	119

8. Equilibrium Between a Small and a Large Phase	123
8.1 The Gibbs Potential of a Small Phase; the Capillarity Approximation	123
8.2 The Size-Dependent Chemical Potential	128
8.2.1 Droplets in a Vapor	129
8.2.2 Gas Bubbles in a Liquid	130
8.2.3 Solid Clusters in a Melt	132
8.3 Statistical Mechanical Treatment of the Free Energy of a Solid Cluster	133
8.4 Capillarity Approximation <i>Versus</i> Model Calculations	138
9. Equilibrium Shapes of Crystals	147
9.1 Curie–Wulff’s Condition and Wulff’s Theorem	148
9.2 Herring’s γ -Plot	151
9.3 Faceting of a K Face	156
9.4 Equilibrium Shape on a Foreign Substrate	158
9.5 Equilibrium Shape of a Droplet on a Substrate: Young’s Equation	161
9.6 Entropy Effects on Surface Free Energy and Equilibrium Shape	163
9.7 Equilibrium of Small Anisotropic Phases; the Thermodynamic Approach	166
9.8 Equilibrium of Small Anisotropic Phases; the Atomistic Approach	168
9.9 The Influence of Foreign Adsorption on the Equilibrium Shape	174
9.9.1 The Different Types of Crystal Face	177
9.9.2 The Equilibrium Shape	179
9.9.3 Faceting	180
<hr/>	
Part III Nucleation	
<hr/>	
10. Homogeneous Nucleation; the Phase Approach	183
10.1 The Classical Nucleation Work. Droplets in a Vapor	184
10.2 Bubbles in Liquids: Boiling and Cavitation	189
10.2.1 Boiling under Positive External Pressure	190
10.2.2 Boiling under Negative External Pressure	192
10.3 Anisotropic Embryos; the Thermodynamic Approach	193
10.4 Anisotropic Embryos; the Atomistic Approach	194
10.5 The Volmer–Weber Treatment of Nucleation Kinetics	196
11. Homogeneous Nucleation; the Chemical Approach	201
11.1 Equilibrium in Associated Vapor	201
11.2 Frenkel’s Size Distribution	207

11.3	Frenkel's Treatment of Steady State Nucleation Kinetics	210
11.4	The Becker–Döring Treatment of Steady State Nucleation Kinetics	215
11.5	Nucleation Kinetics in Condensed Systems	221
11.6	Cluster Isomers and Equilibrium Shape	223
12.	Nucleation on a Foreign Substrate	227
12.1	Nucleation on a Foreign Solid Substrate	227
12.2	Nucleation on the Interface Between Two Fluids	233
12.3	Two-Dimensional Nucleation	235
12.4	Role of the Structure in Substrate Nucleation: Epitaxy	239
12.4.1	Epitaxy by Classical Three-Dimensional Nucleation	240
12.4.2	Epitaxy by “Non-Classical” Three-Dimensional Nucleation	241
12.4.3	Epitaxy by Two-Dimensional Nucleation	242
12.5	Nucleation on Foreign Particles	244
12.5.1	Nucleation on Perfectly Wetted Spherical Particles	245
12.5.2	Nucleation on Better-Than-Perfectly-Wetted Spherical Particles	247
13.	Some Specific Cases of Nucleation	249
13.1	Nucleation on Charged Particles	249
13.2	Solidification of Small Droplets	251
13.3	Nucleation in a Small Volume	255
13.4	Nucleation and Ostwald's Rule	257
13.5	Nucleation in a Binary Alloy	262
13.5.1	Three-Dimensional Binary Alloys	262
13.5.2	Two-Dimensional (Surface) Alloys	265
14.	Time-Dependent Nucleation Kinetics	267
14.1	The Time Lag in Nucleation	267
14.2	Non-Classical Nucleation on a Substrate	270

Part IV Crystal Growth

15.	Elementary Processes on the Surface of a Crystal	279
15.1	Sticking	281
15.2	Surface Migration	283
15.3	Mean Diffusion Length	285
16.	Growth of a “Perfect” K Face	291
16.1	Kinetics of Growth of a Planar K Face	292
16.1.1	The Maximum Growth Rate	292

16.1.2 Incomplete Sticking; Kinetic Coefficients	294
16.1.3 A Simple Case of Diffusion-Controlled Growth	295
16.2 Diffusion <i>Versus</i> Capillarity: Morphological Stability	297
17. Growth of an F Face of a Perfect Crystal	303
17.1 The Transition from Layer-by-Layer to Continuous Growth . .	303
17.2 A One-Dimensional K Face: the Monomolecular Step	308
17.3 Rate of Propagation of a Single Straight Step	314
17.3.1 Advancement Controlled by Surface Diffusion	314
17.3.2 Advancement Controlled by Volume Diffusion	318
17.4 Rate of Advancement of a Curved Step	320
17.5 Growth by Two-Dimensional Nucleation; Mononuclear Growth	323
17.6 Growth by Two-Dimensional Nucleation; Polynuclear Growth	326
18. Growth of an F Face of an Imperfect Crystal	331
18.1 Rate of Propagation of a Train of Equidistant Steps	332
18.1.1 Advancement Controlled by Surface Diffusion	332
18.1.2 Advancement Controlled by Volume Diffusion	333
18.2 Growth Spirals	336
18.2.1 Growth Governed by Surface Diffusion	339
18.2.2 Growth Governed by Volume Diffusion	340
19. Conclusion	341
Appendices	343
A. Legendre Transformations	343
B. Method of Lagrange Multipliers	344
C. Euler's Theorem	344
D. Stirling's Approximation	345
E. Maximum Term Approximation	345
F. Integrals of the Type $\int_0^\infty x^n \exp(-\alpha x^2) dx$	347
References	349
Index	357
