1 Introduction	
Volker Schönfelder	1
References	7
2 Gamma-Ray Production and Absorption Processes	
Roland Diehl	9
2.1 Introduction to Astronomy with Gamma-Rays	9
2.2 Production Processes	12
2.2.1 Charged Particles in Strong Electric or Magnetic Fields	13
2.2.2 Inverse Compton Scattering	16
2.2.3 Nuclear Transitions	17
2.2.4 Decays and Annihilation	18
2.2.5 Charged particles bound in strong magnetic fields	19
2.3 Gamma-Ray Interactions, Absorption Processes	20
2.4 Cosmic Gamma-Ray Sources	21
2.5 The Fate of Gamma-Rays Between Source and Detector	23
References	25
3 Instruments	
Giselher Lichti and Robert Georgii	27
3.1 Detection of Gamma-Rays from Space	27
3.1.1 The Opacity of the Atmosphere	27
3.1.2 The Low Cosmic Gamma-Ray Fluxes	27
3.1.3 The Background of Gamma-Ray Telescopes	28
3.2 Gamma-Ray Detection Techniques	31
3.2.1 Scintillation Techniques	31
3.2.2 Solid-State Detectors	35
3.2.3 Spark Chambers	37
3.2.4 Cherenkov Detectors	38
3.2.5 Drift Chambers	39
3.3 Gamma-Ray Telescopes	39
3.3.1 The Chopper Technique	41
3.3.2 The On/Off Technique	41
3.3.3 Compton Telescopes	50

VIII Contents

3.3.4	Pair-Tracking Telescopes	56
3.3.5	Air-Shower Detection Techniques	60
3.3.6	Gamma-Ray Burst Instruments	65
3.4	Specific Calibration and Data-Analysis Problems	66
3.5	Current Developments and Future Instrumentation	68
3.5.1	Advanced Compton Telescopes	68
3.5.2	Advanced Pair-Production Telescopes	71
3.5.3	The Gamma-Ray Lens	71
	References	73
4	Summary of the Gamma-Ray Sky	
	Volker Schönfelder	77
4.1	Introduction	77
4.2	All-Sky Maps in the MeV–GeV Region	78
4.3	The Sub-MeV Domain	80
4.4	The TeV Gamma-Ray Sky	86
4.5	Gamma-Ray Bursts	87
	References	89
5	The Sun as a Gamma-Ray Source	
	Erich Rieger and Gerhard Rank	91
5.1	Introduction	91
5.2	Production of Gamma-Rays and Neutrons	94
5.2.1	Flare Scenario	94
5.2.2	Conditions for Gamma-Ray Production in the Solar Flare Environment	95
5.3	The Solar Flare Gamma-Ray Spectrum	100
5.3.1	The Observed Gamma-Ray Spectrum	100
5.3.2	Spectral Analysis	103
5.4	Temporal History of Gamma-Ray Emission During Flares	111
5.4.1	Evolution of Flares: Impulsive and Gradual Emission	111
5.4.2	Timing of Electron and Ion Interactions	113
5.4.3	Extended Gamma-Ray Emission	114
5.5	Acceleration Mechanisms	116
5.5.1	Theoretical Considerations of Particle Acceleration	116
5.5.2	Acceleration Models for Solar Flares	119
5.6	Conclusions	121
5.6.1	Our Current Understanding of the Flare Phenomenon	121
5.6.2	Expectations for the Future	122
	References	123

6 Gamma-Ray Pulsars

Gottfried Kanbach	127
6.1 Introduction	127
6.1.1 Radio Pulsars: Discovery of Rotating Neutron Stars	127
6.1.2 The Formation of Neutron Stars and Their Basic Properties	128
6.1.3 Expectation of High-Energy Phenomena Around Young Pulsars	131
6.1.4 Early History of the Observation of Gamma-Ray Pulsars ...	134
6.2 Current Observational Results of High-Energy Emission from Pulsars	135
6.2.1 Detections of High-Energy Pulsars	135
6.2.2 Gamma-Ray Searches and Limits for Other Radio Pulsars ..	138
6.2.3 Light Curves of Gamma-Ray Pulsars	140
6.2.4 Multi-Wavelength Light Curves	141
6.2.5 Spectra of Electromagnetic Radiation from Pulsars	143
6.2.6 Phase-Dependent Gamma-Ray Spectra of Pulsars	147
6.2.7 Pulsar Luminosities and Gamma-Ray Efficiencies	147
6.2.8 Search for Identification of Other Gamma-Ray Sources ...	149
6.3 Theory of Pulsar High-Energy Emissions	150
6.3.1 Acceleration Zones and Production of Relativistic Particles .	150
6.3.2 Radiation and Propagation Processes	151
6.3.3 Field Line Geometries, Beaming and Light Curves	153
6.3.4 Spectra, Luminosities and Efficiencies	154
References	156

7 X-Ray Binaries as Gamma-Ray Sources

Werner Collmar	159
7.1 The Nature of X-Ray Binaries	159
7.2 High-Energy Emission from Black-Hole Systems	161
7.2.1 Time Variability	164
7.2.2 Energy Spectra	168
7.2.3 Interpretation	171
7.3 High-Energy Emission from Neutron-Star Binaries and Cataclysmic Variables	175
7.4 Peculiar Cases	177
7.4.1 Cygnus X-3	177
7.4.2 Centaurus X-3	178
7.5 TeV Observations of X-Ray Binaries	179
7.6 Summary and Conclusions	181
References	183

8 Continuum Gamma Ray Emission from Supernova Remnants

Anatoli Iyudin and Gottfried Kanbach	185
8.1 Introduction	185
8.1.1 Shell-type SNRs	188
8.1.2 Crab-like SNRs	188
8.1.3 Composite SNRs	189
8.2 Continuum Gamma Rays from SNR	191
8.3 SNRs and Particle Acceleration	197
8.4 Discussion and Outlook	200
8.5 Conclusions	204
References	204

9 Diffuse Galactic Continuum Gamma-Rays

Andrew W. Strong and Igor V. Moskalenko	207
9.1 Introduction	207
9.2 Theoretical Background	207
9.2.1 Basic Processes of Gamma-Ray Production	207
9.2.2 Cosmic-Rays	210
9.2.3 Galactic Structure	213
9.3 Gamma-Ray Observations	215
9.4 Interpretation	217
9.4.1 Longitude and Latitude Distributions	218
9.4.2 Spectra of the Inner Galaxy	219
9.4.3 Implications for Cosmic Rays	221
9.4.4 Multi-component Fitting Approach	223
9.4.5 Implications for ISM: H ₂ /CO Calibration	225
9.4.6 Local Clouds	227
9.4.7 Contribution of Unresolved Sources to ‘Diffuse’ Emission ..	227
9.4.8 High Latitudes	227
9.5 Global Gamma-Ray Properties of Our Galaxy	228
9.6 Extragalactic Objects	229
9.6.1 The Large and Small Magellanic Clouds	229
9.6.2 Other Galaxies	230
References	230

10 Nucleosynthesis

Roland Diehl	233
10.1 Introduction	233
10.2 Nucleosynthesis Processes	236
10.3 Sites of Nucleosynthesis	242
10.3.1 Hydrostatic Nuclear Burning	242
10.3.2 Explosive Nucleosynthesis	244
10.3.3 Other Nucleosynthesis Sites	252

10.4 Gamma-Ray Lessons on Supernovae	254
10.4.1 Individual Nucleosynthesis Sources	254
10.4.2 Integrated Nucleosynthesis	262
10.5 Summary and Perspective	271
References	272
 11 Nuclear Interaction Gamma-Ray Lines	
Volker Schönfelder and Andrew W. Strong	275
11.1 Introduction	275
11.2 Nuclear Interaction Lines from the Inner Galaxy	278
11.3 Nuclear Interaction Lines from Accretion Processes	279
11.4 The Observations of the Orion Complex	280
References	282
 12 Gamma-Ray Emission of Active Galaxies	
Werner Collmar	285
12.1 The Nature of Active Galaxies	285
12.1.1 Differences Between Normal and Active Galaxies	285
12.1.2 The Source of Energy for Active Galaxies	286
12.1.3 Unification Schemes for Active Galaxies	287
12.2 Gamma-Ray Blazars	291
12.2.1 Observational Status on AGN before CGRO	291
12.2.2 CGRO Source Detections	291
12.2.3 Observational Properties	293
12.2.4 Broadband Emission of CGRO-Detected Blazars	296
12.2.5 TeV Emission from Blazars	298
12.2.6 Interpretation	300
12.2.7 Summary and Open Questions	306
12.3 Seyfert and Radio Galaxies	307
12.3.1 Seyfert Galaxies	307
12.3.2 Centaurus A	312
12.3.3 Summary	313
12.4 Summary and Conclusions	314
References	316
 13 Unidentified Gamma-Ray Sources	
Olaf Reimer	319
13.1 Objective	319
13.1.1 Gamma-Ray Source Detection History	319
13.1.2 Compton Gamma-Ray Observatory Era	320
13.2 The Observations	321
13.3 Correlation Studies	328
13.3.1 Correlations with Source Populations	328
13.3.2 Prominent Individual Unidentified Sources	332

13.4 Conclusion	336
References	337
 14 The Extragalactic Gamma-Ray Background	
Georg Weidenspointner and Martin Varendorff.....	339
14.1 Introduction	339
14.2 History	343
14.3 Current Results	346
14.4 Possible Origins	350
14.4.1 Unresolved Point Sources	351
14.4.2 Truly Diffuse Sources	357
14.5 Conclusions and Prospects	360
References	364
 15 Gamma-Ray Bursts	
Martin Varendorff.....	367
15.1 Introduction	367
15.1.1 The History of Gamma-Ray Burst Measurements	367
15.1.2 Soft Gamma-Ray Repeater	371
15.1.3 Bursts from Earth	372
15.2 Properties of Gamma-Ray Bursts	372
15.2.1 Time Characteristics of Gamma-Ray Bursts	373
15.2.2 Spectral Characteristics of Gamma-Ray Bursts	376
15.2.3 Spatial Distribution of Gamma-Ray Bursts	379
15.3 Counterparts of Gamma-Ray Bursts	380
15.3.1 Search for Counterparts in Other Wavelengths	380
15.3.2 A New Approach with the Beppo-Sax Satellite and First Success	381
15.4 Models for Gamma-Ray Bursts	385
15.4.1 The Distance to the Gamma-Ray Burst Sources	385
15.4.2 Cosmic Fireball: The Evolution of the Blast Wave	387
15.4.3 The Central Engine	390
15.5 Prospects	393
References	395
