
Contents

1	Introduction	1
1.1	Quantification – a Stringent Necessity	1
1.2	Remarks on Nomenclature	4
2	Case Histories, Geomorphological Facts	7
2.1	Introductory Remarks	7
2.2	Pandemonium Creek	12
2.3	Blackhawk	26
2.4	Köfels	32
2.5	Val Pola	49
2.6	Vaiont	60
2.7	Huascarán	80
2.8	Synopsis of Results	102
3	Comments on Mechanisms of Release	107
3.1	Causes and Signals – a Pragmatic Approach	107
3.2	From Cohesion to Motion	114
3.3	Particular Mechanisms	130
4	Mechanisms of Disintegration	145
4.1	Static Disintegration	145
4.2	Dynamic Disintegration	152
5	Mechanisms of Displacement	161
5.1	Coherent and Disintegrated Motion	161
5.2	Consequences of Velocity-dependent Resistance	171
5.3	Falling, Rolling, Bouncing	177
5.4	Unlubricated Sliding	193
5.5	Lubrication	204
5.6	Fluidisation	218
5.7	Various Mechanisms	229
6	From Analysis to Prediction	241
6.1	Some Fundamentals	241
6.2	How to Determine Velocity?	243
6.3	The Size Effect – a Useful Tool	253
6.4	Improvements – Possibilities and Limitations	265

7	Secondary Effects	277
7.1	Flood Waves	277
7.2	Damming Effects	285
7.3	Various Secondary Effects	289
	Review of Highlights	293
	References	297
	Index	307
