

CONTENTS

Preface.....	V
---------------------	----------

INTRODUCTION

Patterns with Open Branches or Closed Networks: Growth in Scalar or Tensorial Fields

by Y. Couder

1. Growth in a diffusive scalar field.....	2
1.1 The basic Phenomenon.....	2
1.2 The length scales of the patterns	4
1.3 The branching process.....	5
1.4 Speculations on isotropic or tip dominated growth in plants.....	11
2. Growth in a tensorial field	13
2.1 The formation of a network of fractures in a 2D stressed material	13
2.2 The network of the plant leaves venation.....	16
2.3 How can the venation patterns be similar to the crack patterns?....	17
2.4 Discussion	20
3. Conclusion	20

PLANTS

CHAPTER I

Branching in Plants

by F. Hallé

Introduction.....	23
1. Growth and branching	24
2. Why are there meristems in plants?	25

3. Branching and architecture	28
4. Unbranched trees	28
5. Apical vs. lateral branching.....	28
6. Exogenous vs. endogenous branching	29
7. Continuous vs. rhythmic branching	30
8. Immediate vs. delayed branching.....	32
9. Homogeneous vs. differentiated branching.....	33
10. Spontaneous vs. traumatic branching.....	34
11. The architectural models.....	35
12. Unitarian trees vs. colonies	36
13. Crown-shyness.....	38
14. Branching in trees and corals.....	38

CHAPTER II

Inside the Buds: The Meristems

by P. Laufs and J. Traas

1. Introduction.....	41
2. The internode: The basic unit of plant architecture	42
3. Meristem identity and branching patterns.....	44
3.1 Modified meristem identity can affect branching patterns	44
3.2 Regulation of meristem identity	46
4. The shoot apical meristem –SAM–: A major actor in the establishment of architecture	47
4.1 Organization of the SAM: Cells and domains.....	47
4.2 Distribution of meristem functions between the zones.....	48
4.3 Self-organization of the meristem	49
4.4 The meristem as a functional unit.....	50
4.5 Genetic regulation of meristem development and molecular markers	51
4.6 Forming a primordium, what makes a meristem bulge?	52
4.7 Conclusion.....	53
5. Mechanisms and regulation of branch formation.....	53
5.1 Hypothetical mechanisms of branch formation.....	53

5.2 Some examples of branching mechanisms	55
5.3 Conclusions	61
6. Regulation of meristem outgrowth	61
7. Branching in leaves.....	62
7.1 Different leaf morphologies	62
7.2 The compound tomato leaf.....	62
8. Final remarks	66

CONTRIBUTED PAPER 1

Two Symmetries Linking Biological and Physical Branching Morphogenesis

by V. Fleury

1. Introduction.....	73
2. Dendritic growth, botany and in-out symmetry	74
2.1 General principles of vegetal growth.....	74
2.2 A possible relationship between vegetal and crystal morphogenesis	75
2.3 A numerical simulation showing the growth patterns	77
3. Viscous fingers, organ function and time reversal.....	83
3.1 Reversibility of the dendritic growth process.....	83
3.2 Transposition to organ morphogenesis and function.....	83

CHAPTER III

Establishing a Growth Axis in Furoid Algae

by D.L. Kropf, S.R. Bisgrove and W.E. Hable

1. Embryonic morphogenesis.....	87
2. Axis selection.....	89
2.1 Sperm entry	89
2.2 Adhesion and vector perception	90
3. Axis amplification.....	93
4. Transmembrane domains and morphogenesis	95

CONTRIBUTED PAPER 2

Shape Stability during Osmotic Growth

by M. Léonetti

1. Introduction.....	99
2. Osmotic growth	100
2.1 Osmosis	100
2.2 Osmotic growth	101
3. Stability during osmotic growth.....	102
3.1 Formulation of the problem.....	102
3.2 The planar stationary solution	103
3.3 Linear stability analysis	104
4. Conclusion	105

CONTRIBUTED PAPER 3

On Transcellular Ionic Currents

by M. Léonetti and E. Dubois-Violette

1. Introduction.....	107
2. The theoretical approach.....	108
3. Ionic currents resulting from Turing instability	110
4. Ionic currents by self-organization of membrane proteins.....	111
5. Ionic currents by negative differential conductance	115
6. Conclusion	117

RIVERS

CHAPTER IV

Branched Patterns in Geology: Rivers and Other Systems

by P. Meakin, T. Sun and T. Jøssang

1. Introduction.....	119
2. Quantitative analysis of branched patterns	122

2.1 Stream order and Horton/Strahler ratios.....	123
2.2 Crossovers	126
3. The diffusion-limited aggregation model	131
3.1 Examples of DLA-like patterns.....	136
4. Branched rivers	144
4.1 Optimization models	148
5. Discussion.....	156

NEURONS

CHAPTER V

Neuronal Arborization

by J.-P. Ternaux

1. Introduction.....	161
1.1 Historical orientation.....	163
2. Biological events involved in the growth of neuronal arborizations.....	165
2.1 Neuronal morphogenesis	165
2.2 Cytoskeleton and neuronal development.....	166
2.3 Transport of materials in the neuron.....	169
2.4 The growth cone.....	170
2.5 Formation of dendritic trees	180
2.6 Mechanisms of neurite initiation and branching. Biophysical considerations.....	182
3. Morphological properties of neuronal cells and neuronal information processing	193

CONTRIBUTED PAPER 4

Chemical Waves and Dendrites Navigation during Self-Wiring of Neural Nets

by R. Segev and E. Ben-Jacob

1. Introduction.....	203
----------------------	-----

2. Neurite as amoeba with a tail.....	204
3. A need for additional mechanism	205
4. The excitable media mechanism.....	205
5. Conclusions.....	208

BRANCHING ORGANS

CHAPTER VI

The Mouse Embryonic Lung: A Biological Example of Branching Morphogenesis

by S. Bellusci, A. Mailleux, D. Ndiaye and J.-P. Thiery

1. Introduction.....	211
2. Embryonic lung development.....	211
3. Bud formation is a multistep process.....	213
4. Interactions between epithelial and mesenchymal compartments are essential for the branching process	213
5. Several classes of genes are expressed in the embryonic lung	214
6. Bone morphogenetic protein 4 inhibits proliferation of the epithelial compartment	215
7. Sonic hedgehog induces mesenchymal cell proliferation	216
8. Fibroblast growth factor 10 is associated with directional growth of the epithelial buds.....	217
9. Two vertebrate homologs of the drosophila gene sprouty are expressed in the developing lung.....	219
10. Toward an integrated model of budding	220

CHAPTER VII

Branched Structures, Acinus Morphology and Optimal Design of Mammalian Lungs

by B. Sapoval, M. Filoche and E.R. Weibel

1. Introduction.....	225
2. Structure and geometry of pulmonary acinus	229

3. Physical parameters determining the acinus efficiency	230
4. A better geometrical model: The "Hilbert" acinus	234
5. Smaller is better: An optimized acinus	236
6. Comparison with anatomical data.....	238
7. Conclusions.....	240

CONTRIBUTED PAPER 5

Quantitative Studies of Branching Morphogenesis in the Developing Kidney

by I.S. Harper, L.A. Cullen and J.F. Bertram

1. Introduction.....	243
1.1 Epithelial – mesenchymal interaction.....	243
1.2 Pattern of ureteric branching morphogenesis in humans	244
1.3 <i>In vitro</i> models of branching morphogenesis	245
2. A quantitative approach to 3D branching	245
3. Comments on the methodology	246
4. Concluding remarks.....	248

CONTRIBUTED PAPER 6

Morphogenic Responses of Mammary Epithelial Cells Grown in Biological Semi-Solid Substrates

by V. Fafeur, A. Delannoy-Courdent, J.C. Bout
and B. Vandenbunder

1. Introduction.....	251
2. Experiments and methods	252
3. Results.....	254
4. Summary.....	255

VESSELS

CHAPTER VIII

Vascular Development: Design Principles and Morphometric Analysis of a Branched Vascular Tree

by F. le Noble, W. Hacking, D. Slaaf and H. Struijker-Boudier

1. General introduction	257
2. The circulation	258
3. Formation of the vascular tree	260
4. Growth factors	263
4.1 Chemical mediators	264
4.2 Mechanical mediators	265
5. Hemodynamics, metabolic demand and vascular network adaptation....	266
5.1 Flow	267
5.2 Pressure	268
5.3 Metabolic demand	269
6. Analysis of vascular structure	272
7. Conclusion	277

CHAPTER IX

Mechanics of the Large Artery Vascular Wall

by B. Levy and A. Tedgui

1. Introduction	281
2. Parameters in vessel wall mechanics	281
2.1 Forces and stresses	281
2.2 Compliance	283
3. Determination of mechanical properties of blood vessels	284
3.1 <i>In vitro</i> measurements	284
3.2 <i>In vivo</i> measurements	287

CONTRIBUTED PAPER 7**A Link Between Dendritic Growth and Remodeling of Blood Vessels**

by V. Fleury and L. Schwartz

1. Introduction.....	293
2. Description of the model.....	294
3. 2D numerical simulation.....	296
4. A model of 3D growth, and its numerical simulation.....	297
5. Comment on existing work.....	300
6. Reasonable modifications of the model.....	301

BACTERIA**CHAPTER X****Adaptive Branching During Colonial Development of Lubricating Bacteria**

by I. Golding, I. Cohen, I.G. Ron and E. Ben-Jacob

1. Introduction.....	305
2. Basic branching patterns.....	308
2.1 Observations and biological background	308
2.2 Experimental observations: Branching growth of bacterial colonies.....	312
2.3 The communicating walkers model: A hybrid model	318
2.4 The lubricating bacteria model.....	320
2.5 The non-linear diffusion model.....	323
3. Chiral branching patterns.....	324
3.1 Observations.....	324
3.2 The communicating spinors model.....	326
4. Chemotaxis and chemotactic signaling.....	331
4.1 Biological background – chemotaxis in swimming bacteria	331
4.2 Modeling the effect of chemotaxis on branching growth	334

4.3 Modeling the effect of chemotaxis on chiral branching	336
4.4 Weak chirality in <i>P. dendritiformis</i>	339
5. Branching patterns of swarming bacteria.....	342
5.1 Observation of bacterial vortices	342
5.2 Modeling the collective migration.....	344
5.3 Rotational chemotaxis and vortex formation.....	345
5.4 Modeling the cooperative organization of colonies.....	345
6. Sector formation in branching colonies	347
6.1 Observations	347
7. The effect of antibiotics on bacterial branching growth	349
8. Conclusions.....	354

CONTRIBUTED PAPER 8

Pattern Formation Modeling of Bacterial Colonies

by I.R. Cantalapiedra, A.M. Lacasta, C.E. Auguet,
A. Peñaranda and L. Ramírez-Piscina

1. Introduction.....	359
2. Description of the model.....	360
3. Numerical results	361

CRYSTALS

CHAPTER XI

Dendritic Growth

by A. Karma

1. Introduction and outline.....	365
2. Basic physics.....	369
2.1 Surface tension	370
2.2 Diffusion.....	372
2.3 Noise.....	374

3. Morphogenesis.....	375
3.1 Planar Growth	375
3.2 Instability.....	376
4. Needle dynamics.....	377
4.1 Tip growth conditions	379
4.2 Applications	381
4.3 Extension to three dimensions.....	384
5. Branching.....	388
5.1 Sidebranching.....	388
5.2 Tip splitting	392
6. Morphological classification.....	392
6.1 Doublons and multiplets.....	393
6.2 Compact and fractal structures	394
7. Summary and future prospects.....	396

CONTRIBUTED PAPER 9

Sidebranching in Solutal Dendritic Growth

by R. González-Cinca, L. Ramírez-Piscina, J. Casademunt
and A. Hernández-Machado

1. Introduction.....	403
2. Sidebranching in solutal solidification.....	404
3. Sidebranching characteristics.....	406
4. Conclusions.....	406

CONTRIBUTED PAPER 10

Experimental Study of Sidebranching in Directional Solidification

by M. Georgelin and A. Pocheau

1. Introduction.....	409
2. Secondary cell instabilities	409
3. Sidebranching	410

3.1 Critical curve	410
3.2 Noise-amplification theory	411
3.3 Questioning theory	413
4. Conclusion	414

FLUIDS

CHAPTER XII

Branching during Dewetting and Wetting

by C. Misbah

1. Introduction.....	417
2. Definition of the contact angle and spreading pressure	418
3. What determines wetting properties?.....	419
3.1 Coexistence film/film	420
4. Experimental facts	421
5. Mapping of front dewetting dynamics onto crystal growth	422
5.1 The Stokes equation	422
5.2 The lubrication approximation	423
5.3 Mass conservation	425
5.4 A constitutive law.....	426
6. Observed patterns	427
7. The stable envelope of a wetting or dewetting front moves as \sqrt{t}	428
8. Branching of a front.....	430
9. Discussion.....	430

CONTRIBUTED PAPER 11

Viscous Fingering in a Gel

by A. Lindner, P. Coussot and D. Bonn

1. Introduction.....	433
2. Experiment.....	434
3. Discussion and conclusion.....	437

CONTRIBUTED PAPER 12**Branching Transition in Viscous Fingering
with a Liquid Crystal**

by R. Folch, J. Casademunt and A. Hernández-Machado

1. Introduction.....	439
2. Model.....	440
3. Results.....	441

MATHEMATICS
CONTRIBUTED PAPER 13**Mathematical Meristems: The Singularities
of Laplacian Growth**

by M.A. Peterson

1. Introduction.....	445
2. Singular model.....	446
3. Mathematical meristems	449

Glossary.....	451
List of Participants.....	463
Color Plates.....	467

Branching in Nature

Dynamics and Morphogenesis of Branching Structures,
from Cell to River Networks

Fleury, V.; Gouyet, J.-F.; Leonetti, M. (Eds.)

2001, XXIII, 476 p. 300 illus., 25 illus. in color., Softcover

ISBN: 978-3-540-41888-7
