

ACKNOWLEDGMENTS

This book could not have been written without the support and input from others. Throughout the project I have been supported by Carl-Henric Grenholm, Professor of Ethics, and Ulf G. Pettersson, Professor of Medical Genetics, both at Uppsala University, Sweden. I am very grateful to them.

I am also very grateful to Thomas H. Murray (now President of the Hastings Center, Garrison NY) for accepting me as a Visiting Scholar at the Center for Biomedical Ethics, Case Western Reserve University, Cleveland OH, in the Spring of 1997. He made my stay very worthwhile and opened many doors. During my stay at the Center and afterwards I have also been given great support and good advice by Eric T. Juengst.

Moreover, I would like to thank the following persons for consenting to discuss with me some of the issues in this book at an early stage of my research: George Annas, Adrienne Asch, Jonathan Beckwith, Stephanie Bird, Carl Reinhold Bråkenhielm, Robert Cook-Deegan, Sharon Durfy, Troy Duster, Ezekiel Emanuel, Mark Frankel, Mats G. Hansson, Gunnar von Heijne, Albert Jonsen, Rihito Kimura, Barbara Koenig, Bernard Lo, Eric Meslin, Arno Motulsky, Marie Nordström, Diane Paul, Stephen Post, Danielle Ripich, Mark Sagoff, Gunnar Tibell, Robert Wachbroit, LeRoy Walters, Charles Weiner, and Claes-Göran Westrin.

Let me stress that the views expressed in the book are all mine. They are not necessarily shared by the persons mentioned above.

I am also grateful to the Centre for Research Ethics and the Research Program Ethics in Biomedicine at Uppsala University for giving me the opportunity to carry out the research behind the study in a stimulating academic environment.

The language has been examined by Judith Rinker and I would like to thank her.

Finally, I would like to thank two publishers for allowing me to include parts of papers published elsewhere. Parts of Chapter 1 have appeared in *Theoretical Medicine and Bioethics*. These are published with permission of Kluwer Academic Publishers, Dordrecht (Nordgren, 1998a). Parts of Chapter 6 have been published in *Community Genetics*, and are included with permission of Karger, Basel (Nordgren, 1998b).

Research for the study has been funded by a grant from The Swedish Medical Research Council.

Uppsala, September 2001
Anders Nordgren

Responsible Genetics

The Moral Responsibility of Geneticists for the
Consequences of Human Genetics Research

Nordgren, A.

2001, XIX, 276 p., Hardcover
