

Table of Contents

CONTENTS, VOLUME II

Preface to the Third Edition	vii
Preface to the First Edition	xi
1. Multi-Species Waves and Practical Applications	1
1.1 Intuitive Expectations	1
1.2 Waves of Pursuit and Evasion in Predator–Prey Systems	5
1.3 Competition Model for the Spatial Spread of the Grey Squirrel in Britain	12
1.4 Spread of Genetically Engineered Organisms	18
1.5 Travelling Fronts in the Belousov–Zhabotinskii Reaction	35
1.6 Waves in Excitable Media	41
1.7 Travelling Wave Trains in Reaction Diffusion Systems with Oscillatory Kinetics	49
1.8 Spiral Waves	54
1.9 Spiral Wave Solutions of λ – ω Reaction Diffusion Systems	61
Exercises	67
2. Spatial Pattern Formation with Reaction Diffusion Systems	71
2.1 Role of Pattern in Biology	71
2.2 Reaction Diffusion (Turing) Mechanisms	75
2.3 General Conditions for Diffusion-Driven Instability: Linear Stability Analysis and Evolution of Spatial Pattern	82
2.4 Detailed Analysis of Pattern Initiation in a Reaction Diffusion Mechanism	90
2.5 Dispersion Relation, Turing Space, Scale and Geometry Effects in Pattern Formation Models	103
2.6 Mode Selection and the Dispersion Relation	113
2.7 Pattern Generation with Single-Species Models: Spatial Heterogeneity with the Spruce Budworm Model	120

2.8	Spatial Patterns in Scalar Population Interaction Diffusion Equations with Convection: Ecological Control Strategies	125
2.9	Nonexistence of Spatial Patterns in Reaction Diffusion Systems: General and Particular Results	130
	Exercises	135
3.	Animal Coat Patterns and Other Practical Applications of Reaction Diffusion Mechanisms	141
3.1	Mammalian Coat Patterns—‘How the Leopard Got Its Spots’	142
3.2	Teratologies: Examples of Animal Coat Pattern Abnormalities	156
3.3	A Pattern Formation Mechanism for Butterfly Wing Patterns	161
3.4	Modelling Hair Patterns in a Whorl in <i>Acetabularia</i>	180
4.	Pattern Formation on Growing Domains: Alligators and Snakes	192
4.1	Stripe Pattern Formation in the Alligator: Experiments	193
4.2	Modelling Concepts: Determining the Time of Stripe Formation	196
4.3	Stripes and Shadow Stripes on the Alligator	200
4.4	Spatial Patterning of Teeth Primordia in the Alligator: Background and Relevance	205
4.5	Biology of Tooth Initiation	207
4.6	Modelling Tooth Primordium Initiation: Background	213
4.7	Model Mechanism for Alligator Teeth Patterning	215
4.8	Results and Comparison with Experimental Data	224
4.9	Prediction Experiments	228
4.10	Concluding Remarks on Alligator Tooth Spatial Patterning	232
4.11	Pigmentation Pattern Formation on Snakes	234
4.12	Cell-Chemotaxis Model Mechanism	238
4.13	Simple and Complex Snake Pattern Elements	241
4.14	Propagating Pattern Generation with the Cell-Chemotaxis System	248
5.	Bacterial Patterns and Chemotaxis	253
5.1	Background and Experimental Results	253
5.2	Model Mechanism for <i>E. coli</i> in the Semi-Solid Experiments	260
5.3	Liquid Phase Model: Intuitive Analysis of Pattern Formation	267
5.4	Interpretation of the Analytical Results and Numerical Solutions	274
5.5	Semi-Solid Phase Model Mechanism for <i>S. typhimurium</i>	279
5.6	Linear Analysis of the Basic Semi-Solid Model	281
5.7	Brief Outline and Results of the Nonlinear Analysis	287
5.8	Simulation Results, Parameter Spaces and Basic Patterns	292
5.9	Numerical Results with Initial Conditions from the Experiments	297
5.10	Swarm Ring Patterns with the Semi-Solid Phase Model Mechanism	299
5.11	Branching Patterns in <i>Bacillus subtilis</i>	306
6.	Mechanical Theory for Generating Pattern and Form in Development	311
6.1	Introduction, Motivation and Background Biology	311

6.2	Mechanical Model for Mesenchymal Morphogenesis	319
6.3	Linear Analysis, Dispersion Relation and Pattern Formation Potential	330
6.4	Simple Mechanical Models Which Generate Spatial Patterns with Complex Dispersion Relations	334
6.5	Periodic Patterns of Feather Germs	345
6.6	Cartilage Condensations in Limb Morphogenesis and Morphogenetic Rules	350
6.7	Embryonic Fingerprint Formation	358
6.8	Mechanochemical Model for the Epidermis	367
6.9	Formation of Microvilli	374
6.10	Complex Pattern Formation and Tissue Interaction Models	381
	Exercises	394
7.	Evolution, Morphogenetic Laws, Developmental Constraints and Teratologies	396
7.1	Evolution and Morphogenesis	396
7.2	Evolution and Morphogenetic Rules in Cartilage Formation in the Vertebrate Limb	402
7.3	Teratologies (Monsters)	407
7.4	Developmental Constraints, Morphogenetic Rules and the Consequences for Evolution	411
8.	A Mechanical Theory of Vascular Network Formation	416
8.1	Biological Background and Motivation	416
8.2	Cell–Extracellular Matrix Interactions for Vasculogenesis	417
8.3	Parameter Values	425
8.4	Analysis of the Model Equations	427
8.5	Network Patterns: Numerical Simulations and Conclusions	433
9.	Epidermal Wound Healing	441
9.1	Brief History of Wound Healing	441
9.2	Biological Background: Epidermal Wounds	444
9.3	Model for Epidermal Wound Healing	447
9.4	Nondimensional Form, Linear Stability and Parameter Values	450
9.5	Numerical Solution for the Epidermal Wound Repair Model	451
9.6	Travelling Wave Solutions for the Epidermal Model	454
9.7	Clinical Implications of the Epidermal Wound Model	461
9.8	Mechanisms of Epidermal Repair in Embryos	468
9.9	Actin Alignment in Embryonic Wounds: A Mechanical Model	471
9.10	Mechanical Model with Stress Alignment of the Actin Filaments in Two Dimensions	482
10.	Dermal Wound Healing	491
10.1	Background and Motivation—General and Biological	491

10.2	Logic of Wound Healing and Initial Models	495
10.3	Brief Review of Subsequent Developments	500
10.4	Model for Fibroblast-Driven Wound Healing: Residual Strain and Tissue Remodelling	503
10.5	Solutions of the Model Equations and Comparison with Experiment	507
10.6	Wound Healing Model of Cook (1995)	511
10.7	Matrix Secretion and Degradation	515
10.8	Cell Movement in an Oriented Environment	518
10.9	Model System for Dermal Wound Healing with Tissue Structure . . .	521
10.10	One-Dimensional Model for the Structure of Pathological Scars . . .	526
10.11	Open Problems in Wound Healing	530
10.12	Concluding Remarks on Wound Healing	533
11.	Growth and Control of Brain Tumours	536
11.1	Medical Background	538
11.2	Basic Mathematical Model of Glioma Growth and Invasion	542
11.3	Tumour Spread <i>In Vitro</i> : Parameter Estimation	550
11.4	Tumour Invasion in the Rat Brain	559
11.5	Tumour Invasion in the Human Brain	563
11.6	Modelling Treatment Scenarios: General Comments	579
11.7	Modelling Tumour Resection in Homogeneous Tissue	580
11.8	Analytical Solution for Tumour Recurrence After Resection	584
11.9	Modelling Surgical Resection with Brain Tissue Heterogeneity	588
11.10	Modelling the Effect of Chemotherapy on Tumour Growth	594
11.11	Modelling Tumour Polyclonality and Cell Mutation	605
12.	Neural Models of Pattern Formation	614
12.1	Spatial Patterning in Neural Firing with a Simple Activation–Inhibition Model	614
12.2	A Mechanism for Stripe Formation in the Visual Cortex	622
12.3	A Model for the Brain Mechanism Underlying Visual Hallucination Patterns	627
12.4	Neural Activity Model for Shell Patterns	638
12.5	Shamanism and Rock Art	655
	Exercises	659
13.	Geographic Spread and Control of Epidemics	661
13.1	Simple Model for the Spatial Spread of an Epidemic	661
13.2	Spread of the Black Death in Europe 1347–1350	664
13.3	Brief History of Rabies: Facts and Myths	669
13.4	The Spatial Spread of Rabies Among Foxes I: Background and Simple Model	673
13.5	The Spatial Spread of Rabies Among Foxes II: Three-Species (<i>SIR</i>) Model	681

13.6 Control Strategy Based on Wave Propagation into a
Nonepidemic Region: Estimate of Width of a Rabies Barrier 696

13.7 Analytic Approximation for the Width of the Rabies
Control Break 700

13.8 Two-Dimensional Epizootic Fronts and Effects of Variable Fox
Densities: Quantitative Predictions for a Rabies Outbreak
in England 704

13.9 Effect of Fox Immunity on the Spatial Spread of Rabies 710

Exercises 720

14. Wolf Territoriality, Wolf–Deer Interaction and Survival 722

14.1 Introduction and Wolf Ecology 722

14.2 Models for Wolf Pack Territory Formation:
Single Pack—Home Range Model 729

14.3 Multi-Wolf Pack Territorial Model 734

14.4 Wolf–Deer Predator–Prey Model 745

14.5 Concluding Remarks on Wolf Territoriality and Deer Survival 751

14.6 Coyote Home Range Patterns 753

14.7 Chippewa and Sioux Intertribal Conflict c1750–1850 754

Appendix

A. General Results for the Laplacian Operator in Bounded Domains 757

Bibliography 761

Index 791

Table of Contents (*continued*)

CONTENTS, VOLUME I

J.D. Murray: *Mathematical Biology, I: An Introduction*

Preface to the Third Edition	vii
Preface to the First Edition	xi
1. Continuous Population Models for Single Species	1
1.1 Continuous Growth Models	1
1.2 Insect Outbreak Model: Spruce Budworm	7
1.3 Delay Models	13
1.4 Linear Analysis of Delay Population Models: Periodic Solutions . . .	17
1.5 Delay Models in Physiology: Periodic Dynamic Diseases	21
1.6 Harvesting a Single Natural Population	30
1.7 Population Model with Age Distribution	36
Exercises	40
2. Discrete Population Models for a Single Species	44
2.1 Introduction: Simple Models	44
2.2 Cobwebbing: A Graphical Procedure of Solution	49
2.3 Discrete Logistic-Type Model: Chaos	53
2.4 Stability, Periodic Solutions and Bifurcations	59
2.5 Discrete Delay Models	62
2.6 Fishery Management Model	67
2.7 Ecological Implications and Caveats	69
2.8 Tumour Cell Growth	72
Exercises	75
3. Models for Interacting Populations	79
3.1 Predator–Prey Models: Lotka–Volterra Systems	79
3.2 Complexity and Stability	83

3.3	Realistic Predator–Prey Models	86
3.4	Analysis of a Predator–Prey Model with Limit Cycle Periodic Behaviour: Parameter Domains of Stability	88
3.5	Competition Models: Competitive Exclusion Principle	94
3.6	Mutualism or Symbiosis	99
3.7	General Models and Cautionary Remarks	101
3.8	Threshold Phenomena	105
3.9	Discrete Growth Models for Interacting Populations	109
3.10	Predator–Prey Models: Detailed Analysis	110
	Exercises	115
4.	Temperature-Dependent Sex Determination (TSD)	119
4.1	Biological Introduction and Historical Asides on the Crocodilia	119
4.2	Nesting Assumptions and Simple Population Model	124
4.3	Age-Structured Population Model for Crocodilia	130
4.4	Density-Dependent Age-Structured Model Equations	133
4.5	Stability of the Female Population in Wet Marsh Region I	135
4.6	Sex Ratio and Survivorship	137
4.7	Temperature-Dependent Sex Determination (TSD) Versus Genetic Sex Determination (GSD)	139
4.8	Related Aspects on Sex Determination	142
	Exercise	144
5.	Modelling the Dynamics of Marital Interaction: Divorce Prediction and Marriage Repair	146
5.1	Psychological Background and Data: Gottman and Levenson Methodology	147
5.2	Marital Typology and Modelling Motivation	150
5.3	Modelling Strategy and the Model Equations	153
5.4	Steady States and Stability	156
5.5	Practical Results from the Model	164
5.6	Benefits, Implications and Marriage Repair Scenarios	170
6.	Reaction Kinetics	175
6.1	Enzyme Kinetics: Basic Enzyme Reaction	175
6.2	Transient Time Estimates and Nondimensionalisation	178
6.3	Michaelis–Menten Quasi-Steady State Analysis	181
6.4	Suicide Substrate Kinetics	188
6.5	Cooperative Phenomena	197
6.6	Autocatalysis, Activation and Inhibition	201
6.7	Multiple Steady States, Mushrooms and Isolals	208
	Exercises	215
7.	Biological Oscillators and Switches	218
7.1	Motivation, Brief History and Background	218
7.2	Feedback Control Mechanisms	221

7.3	Oscillators and Switches with Two or More Species: General Qualitative Results	226
7.4	Simple Two-Species Oscillators: Parameter Domain Determination for Oscillations	234
7.5	Hodgkin–Huxley Theory of Nerve Membranes: FitzHugh–Nagumo Model	239
7.6	Modelling the Control of Testosterone Secretion and Chemical Castration	244
	Exercises	253
8.	BZ Oscillating Reactions	257
8.1	Belousov Reaction and the Field–Körös–Noyes (FKN) Model	257
8.2	Linear Stability Analysis of the FKN Model and Existence of Limit Cycle Solutions	261
8.3	Nonlocal Stability of the FKN Model	265
8.4	Relaxation Oscillators: Approximation for the Belousov–Zhabotinskii Reaction	268
8.5	Analysis of a Relaxation Model for Limit Cycle Oscillations in the Belousov–Zhabotinskii Reaction	271
	Exercises	277
9.	Perturbed and Coupled Oscillators and Black Holes	278
9.1	Phase Resetting in Oscillators	278
9.2	Phase Resetting Curves	282
9.3	Black Holes	286
9.4	Black Holes in Real Biological Oscillators	288
9.5	Coupled Oscillators: Motivation and Model System	293
9.6	Phase Locking of Oscillations: Synchronisation in Fireflies	295
9.7	Singular Perturbation Analysis: Preliminary Transformation	299
9.8	Singular Perturbation Analysis: Transformed System	302
9.9	Singular Perturbation Analysis: Two-Time Expansion	305
9.10	Analysis of the Phase Shift Equation and Application to Coupled Belousov–Zhabotinskii Reactions	310
	Exercises	313
10.	Dynamics of Infectious Diseases	315
10.1	Historical Aside on Epidemics	315
10.2	Simple Epidemic Models and Practical Applications	319
10.3	Modelling Venereal Diseases	327
10.4	Multi-Group Model for Gonorrhea and Its Control	331
10.5	AIDS: Modelling the Transmission Dynamics of the Human Immunodeficiency Virus (HIV)	333
10.6	HIV: Modelling Combination Drug Therapy	341
10.7	Delay Model for HIV Infection with Drug Therapy	350
10.8	Modelling the Population Dynamics of Acquired Immunity to Parasite Infection	351

10.9	Age-Dependent Epidemic Model and Threshold Criterion	361
10.10	Simple Drug Use Epidemic Model and Threshold Analysis	365
10.11	Bovine Tuberculosis Infection in Badgers and Cattle	369
10.12	Modelling Control Strategies for Bovine Tuberculosis in Badgers and Cattle	379
	Exercises	393
11.	Reaction Diffusion, Chemotaxis, and Nonlocal Mechanisms	395
11.1	Simple Random Walk and Derivation of the Diffusion Equation . . .	395
11.2	Reaction Diffusion Equations	399
11.3	Models for Animal Dispersal	402
11.4	Chemotaxis	405
11.5	Nonlocal Effects and Long Range Diffusion	408
11.6	Cell Potential and Energy Approach to Diffusion and Long Range Effects	413
	Exercises	416
12.	Oscillator-Generated Wave Phenomena	418
12.1	Belousov–Zhabotinskii Reaction Kinematic Waves	418
12.2	Central Pattern Generator: Experimental Facts in the Swimming of Fish	422
12.3	Mathematical Model for the Central Pattern Generator	424
12.4	Analysis of the Phase Coupled Model System	431
	Exercises	436
13.	Biological Waves: Single-Species Models	437
13.1	Background and the Travelling Waveform	437
13.2	Fisher–Kolmogoroff Equation and Propagating Wave Solutions	439
13.3	Asymptotic Solution and Stability of Wavefront Solutions of the Fisher–Kolmogoroff Equation	444
13.4	Density-Dependent Diffusion-Reaction Diffusion Models and Some Exact Solutions	449
13.5	Waves in Models with Multi-Steady State Kinetics: Spread and Control of an Insect Population	460
13.6	Calcium Waves on Amphibian Eggs: Activation Waves on <i>Medaka</i> Eggs	467
13.7	Invasion Wavespeeds with Dispersive Variability	471
13.8	Species Invasion and Range Expansion	478
	Exercises	482
14.	Use and Abuse of Fractals	484
14.1	Fractals: Basic Concepts and Biological Relevance	484
14.2	Examples of Fractals and Their Generation	487
14.3	Fractal Dimension: Concepts and Methods of Calculation	490
14.4	Fractals or Space-Filling?	496

Appendices	501
A. Phase Plane Analysis	501
B. Routh-Hurwitz Conditions, Jury Conditions, Descartes' Rule of Signs, and Exact Solutions of a Cubic	507
B.1 Polynomials and Conditions	507
B.2 Descartes' Rule of Signs	509
B.3 Roots of a General Cubic Polynomial	510
Bibliography	513
Index	537
