<b>Chapter 2 ADO.NET–Getting Connected</b>	<b>39</b>
ADO.NET .NET Data Providers	40
Choosing the Right Provider	41
Creating ADO.NET Connection Objects	42
Using Constructors in Declarations	43
Building an ADO.NET ConnectionString	44
Connecting via the SqlClient .NET Data Provider	51
Introducing System.Data.SqlClient	51
Examining the Connection Object Properties	53
Examining Connection Object Methods	55
Sinking Connection Object Events	56
Managing Transactions	59
Connecting with the Odbc .NET Data Provider	59
Using the Odbc .NET Data Provider	60
Managing the Odbc.Connection Object	61
ODBC Connection Strings	64
Opening ADO.NET Connections in Code	65
Using the IDE to Get Connected	66
Adding Connections	66
Closing Connections	68
Managing the ADO.NET Garbage Collector	68
Connection Information and Security	69
ADO.NET Connection Pooling	71
OleDb and Odbc Connection Pooling	75
Debugging the Connection Pool	75
COM-based ADO as a .NET Data Provider	75
Instantiating Your ADOc Namespace	76
 <b>Chapter 3 ADO.NET Command Strategies</b>	 <b>79</b>
Understanding ADO.NET Commands	79
Introducing ADO.NET Parameter Queries	82
Executing Ad Hoc Queries Using ADO.NET	84
Constructing SQL for your Query	85
Creating a DataSet with the IDE	98
Using Drag-and-Drop with the IDE	102
Managing Parameter Queries	111
Managing Multiple-Table Queries	116
Managing Stored Procedure Queries	121
Managing Multiple-Resultset Queries	129
Exploring the Command Execute Methods	133
Binding to Resultset Columns	136

<b>Chapter 4 ADO.NET DataReader Strategies</b>	<b>141</b>
Comparing ADOc with ADO.NET	142
Understanding the DataReader	144
Using the DataReader Get Methods to Retrieve Data	151
Using GetValues to Fetch a Row	154
Cleaning Up After Your DataReader	155
 <b>Chapter 5 Using the DataTable and DataSet</b>	 <b>157</b>
Understanding the DataSet and DataTable Structure	159
Typed Versus Untyped DataSets	161
Importing ADOc Recordsets	168
Comparing ADOc Recordsets and DataTable Objects	169
Building DataTables	172
Building DataTables with the Constructor	173
Building DataTables Using the DataAdapter Fill Method	173
Building DataTable Objects Within a DataSet	177
Using FillSchema to Retrieve DDL	180
Accessing DataTable Data	181
Accessing the DataColumnCollection (Columns)	182
Understanding the DataRow Object	187
Accessing the DataRowCollection (Rows)	187
Testing for Results	191
Accessing DataSet Data	194
Positioning the Current Row Pointer	195
Binding to DataSets	196
 <b>Chapter 6 Filtering, Sorting, and Finding</b>	 <b>197</b>
Filtering and Sorting with the Select Method	198
Sorting with the Select Method	199
Filtering on RowState and Version	205
Filtering and Sorting with the DataView Object	205
Setting DataView Filter Properties	206
Creating DataView Objects with Visual Studio	210
Updating a DataView	210
Working with the DataViewManager	211
The DefaultViewManager Property	212
Using the Find Methods	212
The Rows Collection Find Method	213
The DataView Object's Find Method	216
The Rows Collection Contains Method	219

<b>Chapter 7 ADO.NET Update Strategies</b>	221
<i>Changing Data—The Fundamentals</i>	223
Addressing the Value Property with Untyped Datasets	223
Addressing the Value Property with Typed Datasets	224
Creating New DataRows	224
Deleting DataSet Rows	226
“Undoing” a Delete Operation	227
Postponing Constraint Enforcement	228
Using BeginEdit	228
Data Validation	229
Checking RowState	233
<i>Update Strategies</i>	238
Creating Updatable DataSets	239
Using the CommandBuilder Class	240
<i>Using Visual Studio to Generate Action Queries</i>	251
Reviewing the Generated Stored Procedures	251
Reviewing the Generated Code	254
<i>Retrieving Autonumber, Identity, or GUIDs</i>	258
<i>Understanding the Update Methods</i>	262
<i>Update Performance</i>	264
Another Approach to Bulk Inserts: Use XML	265
<i>Updating the Authors Table—An Example</i>	266
Working with an Updatable DataGrid Control	268
Showing the Available Data Versions	268
Showing the Row Counts	270
Using GetChanges to Manage Modified Rows	272
<i>Update Exception Handling Strategies</i>	273
Using the ContinueAfterError Property	274
What to Do When an Update Fails	276
<i>Handling Update Method Exceptions</i>	277
Coding the Update DBConcurrencyException Trap	279
<i>Executing Ad Hoc Queries to Perform Updates</i>	280
<i>Merging and Transporting Data</i>	281
 <b>Chapter 8 ADO.NET Constraint Strategies</b>	 283
<i>Understanding .NET Constraints</i>	283
<i>How ADO.NET Implements Constraints</i>	285
Managing the Constraints Collection	286
Implementing Unique Constraints	287
Implementing Foreign Key Constraints	289
Understanding Parent/Child Primary Key/Foreign Key Relationships	292
Using the FillSchema Method	294
<i>Creating DataRelation Objects</i>	295

<b>Chapter 9 ADO.NET Exception Management Strategies</b>	<b>301</b>
Structured Exception Handling	302
Understanding try/catch	303
try/catch Syntax	303
Standard Exceptions	303
Variable Scope in try/catch Blocks	305
Exceptions That Fire Outside of try/catch Scope	305
Nesting Exception Handlers	305
Trapping Specific vs. General Exceptions	306
The System.Data Exceptions	306
The SqlException Class	308
The SqlError Class	310
The OleDbException Class	310
Displaying the Error Message	311
 <b>Chapter 10 ADO.NET and XML</b>	 <b>313</b>
XML Support in ADO.NET	314
Standardizing on XML Formats	315
Understanding XML and DataSet Objects	316
Importing DataSet Data from an XML Document	316
What Are DiffGrams?	319
Merging XML Data with Your DataSet	321
Fetching and Saving DataSet Objects as XML	321
Loading Schema from XML	324
Persisting XML Schema	325
Creating a Web Service as an XML Data Source	326
Passing an Updated DataSet Back to a Web Service	336
Creating Custom Exception Handlers	341
ADO.NET and SOAP	342
