I. INTRODUCTION 1

1. A BRIEF HISTORY OF ARCHAEOLOGICAL SURVEY 2

1.1 Early Archaeological Reconnaissance 2

1.2 Fieldwalking in Britain 3

1.3 Early Air Reconnaissance 4

1.4 Surveys in Northwest Europe 4

1.5 The Virù Valley Survey 4

1.6 Diyala and Uruk Surveys, Iraq 5

1.7 The Basin of Mexico Project 6

1.8 Site Survey in the American Southwest 6

1.9 Survey in North American Forests 7

1.10 “Non-site Survey,” and “Landscape Archaeology” 7

1.11 Intertidal and Shallow-lake Survey 8

2. SURVEY’S UNIQUE CONTRIBUTION TO ARCHAEOLOGY 10

3. SURFACE DISTRIBUTIONS AND BURIED LANDSCAPES 11

3.1 Models of Cultural Distributions 12

3.1.1 The Monument Model 13

3.1.2 The Earthwork Model 13

3.1.3 The Uniform Distribution 14

3.1.4 The Modal, “Bulls-eye,” or “Fried-egg” Model 15

3.1.4.1 Mathematical Models for Clusters of Artifacts 16

3.1.4.2 Contagious Distributions 17

3.1.5 The Palimpsest Model 18

3.1.6 The “Off-site” or “Intersite” Model 19

3.1.7 The Distributional or “Non-site” Model 20

3.1.8 The Place Model 20

3.1.9 The Paleolandscape Model 22

4. RESEARCH DESIGN IN ARCHAEOLOGICAL SURVEY 22

II. THE GOALS OF ARCHAEOLOGICAL SURVEY	27
1. TYPES OF GOALS	27
1.1 Prospection	28
1.2 Statistical Survey	30
1.2.1 Populations, Parameters and Estimation	30
1.2.2 Estimating Densities of Sites	30
1.2.3 Estimating Densities of Artifacts on the Landscape	31
1.2.4 Estimating Proportions of Site Types	31
1.2.5 Estimating Human Population Size or Growth Rate	32
1.2.6 Estimating Proportions of Sites by Ecological or Land-use Zone	32
1.2.7 Estimating Parameters of Artifact Attributes	32
1.2.8 Estimating the Range or Diversity of Archaeological Materials	33
1.2.9 The Relevance of Prospecting Tools	33
1.3 Surveying for Spatial Structure	34
1.3.1 Detecting Settlement Lattices, Landscape Systems, and Communica- tion Routes	34
1.3.2 Mapping "Continuous" Distributions	34
1.4 Surveys with Multiple Goals	35
1.5 The Issue of Methodological Consistency	36
1.6 Summary	38
III. THE DISCOVERY OF ARCHAEOLOGICAL MATERIALS BY SURVEY	39
1. FACTORS AFFECTING ARCHAEOLOGICAL DETECTION	39
1.1 Method of Inspection	40
1.1.1 Visual Inspection in Surface Survey	40
1.1.2 Visual Inspection of Aerial Photographs with Groundchecks	41
1.1.3 Survey by Test Pits, Divoting, Coring, or Augering (SST)	42
1.1.4 Geophysical Survey	44
1.1.4.1 Resistivity Survey	44
1.1.4.2 Magnetometer Survey	44
1.1.4.3 Electromagnetic (EM) Survey	44
1.1.4.4 Seismic Survey	45
1.1.4.5 Sonar or Acoustic Survey	45
1.1.4.6 Ground-Penetrating Radar (GPR)	45
1.1.4.7 Chemical Survey	45
1.1.4.8 Thermal Survey	45
1.1.5 Underwater Survey	45
1.2 Visibility	46
1.3 Obtrusiveness	48
1.3.1 The Constituents of Archaeological Distributions	49
1.3.2 Obtrusiveness of Artifact Scatters	49

1.3.3	Constituent Removal by Chemical or Mechanical Destruction	54
1.3.4	Obtrusiveness in Aerial Reconnaissance	54
1.3.5	Obtrusiveness in Geophysical Survey	55
1.3.6	Obtrusiveness in Chemical Survey	55
1.4	Distance from Target to Sensor	56
1.4.1	The Law of Clean Sweep or Definite Detection	57
1.4.2	Inverse-cube Law	58
1.5	Geometry of Sites or Artifact Clusters	59
1.6	Intensity or Density of Effort	60
1.7	Resolution	62
1.8	Coverage	63
1.9	Accessibility	63
1.10	Crew Training, Experience, and Motivation	65
1.10.1	Training and Briefing Team Members	66
1.10.2	Team Composition	66
1.10.3	Team Motivation	66
1.10.4	Accounting for Variability	67
1.11	Data Units	67
1.12	False Targets	67
2.	ESTIMATING DISCOVERY PROBABILITIES	68
3.	POST-DEPOSITIONAL FACTORS THAT AFFECT SPATIAL PATTERN	72
3.1	Artifact Displacement or Sorting by Erosion	73
3.2	Artifact Removal by Erosion	73
3.3	Artifact Displacement or Removal by Bioturbation	73
3.4	Artifact Removal by Chemical or Mechanical Destruction	73
3.5	Artifact Displacement by Plowing	73
4.	SUMMARY	74
IV.	UNITS, SAMPLING FRAMES, AND EDGE EFFECTS IN ARCHAEOLOGICAL SURVEY	75
1.	THE SPATIAL DISTRIBUTION OF MATERIAL CULTURE	75
2.	BOUNDARIES OF THE SURVEY AREA	76
2.1	Physical-Geographical Boundaries	77
2.2	Historical-Political Boundaries	78
2.3	Estimated Political-Economic Boundaries	78
2.4	Catchment Boundaries	78
2.5	Oversize Boundaries and Group Territories	79
2.6	Edge Effects	80
2.6.1	Edge Effects in Nearest Neighbor Analysis	80
2.6.2	Edge Effects on Rank-Size Analysis	80
3.	TYPES, SHAPES, AND ORIENTATION OF UNITS	81
3.1	Sites	81

3.1.1 Site Size, Shape, and Orientation	82
3.2 Geometrical Spatial Units	83
3.2.1 Edge Effects on the Detection of Sites	83
3.2.2 Edge Effects on Parameter Estimates	85
3.2.3 Cost Effects of Unit Size	86
3.3 Non-geometrical Spatial Units	86
3.4 Arrangement of Units	88
3.4.1 Regular Grids	88
3.4.1.1 Arrangement of Point Samples	88
3.4.2 Transects	89
3.4.2.1 Parallel Transects	89
3.4.2.2 Intersecting Transects	90
3.4.2.3 Undulating Transects	91
3.4.2.4 Retiring-square Pattern	92
3.4.3 Unconventional Arrangements	92
3.4.4 Nested Arrangements	94
4. SCALE EFFECTS IN ARCHAEOLOGICAL SURVEY	94
4.1 Size of Units	95
4.2 Optimal Arrangements, Sizes, and Spacing	96
4.2.1 Optimizing the Arrangement of Systematic Point Grids	97
4.2.2 Optimizing the Arrangement of Continuous Parallel Transects	100
4.2.3 Optimizing the Arrangement of Polygons	100
4.2.4 Optimizing the Spacing of Systematic Point Grids	101
4.2.4.1 Optimal Spacing of Point Grids at a Fixed Cost	102
4.2.4.2 Optimal Spacing of Point Grids Taking Cost and "Value" into Account	102
4.2.5 Optimizing the Spacing of Parallel Transects	105
4.2.5.1 Optimal Spacing of Transects Taking Costs and "Value" into Account	106
4.2.5.2 Spacing Transects within Polygons	107
4.2.5.3 Retiring-square Pattern	108
4.2.6 Optimizing the Size of Quadrats and Other Spatial Units	108
4.2.6.1 Optimizing Polygon Size for the Variance of Estimates at a Fixed Cost	108
4.2.6.2 Balancing the Costs and Benefits of Polygon Size	109
4.2.6.3 Optimizing the Size of SSTs for Artifact Density	109
4.3 Influences on Detection of Spatial Pattern	110
4.4 Influences on Parameter Estimates	110
5. CONCLUSIONS	112
V. SAMPLING SPACE: STATISTICAL SURVEYS	113

1. SAMPLING DESIGNS	113
1.1 Basic Sampling Designs	113
1.1.1 Random Sampling	113
1.1.2 Stratified Sampling	115
1.1.3 Systematic Sampling	116
1.2 Complications in Geometric Spatial Samples	117
1.2.1 Systematic, Stratified, Unaligned Sampling	117
1.2.2 Transects Nested in Quadrats	117
1.2.3 Cross-cutting Stratification	118
1.2.4 Adaptive Sampling	118
1.3 Cluster Sampling and Element Sampling	119
1.4 Sampling with Point Samples	121
1.5 Sampling Geomorphic and Cultural Features or "Places"	122
2. SAMPLE SIZE AND ESTIMATION	124
2.1 Sample Size and Sampling Fraction	124
2.2 Fixed-sample Designs	124
2.3 Optimal Allocation for Stratified Samples	126
2.3.1 Neyman Allocation	127
2.3.2 Minimizing Variance on a Fixed Budget	128
2.3.3 Minimizing Cost for a Fixed Variance	129
2.4 Sequential Sampling	130
3. USING SAMPLES	130
3.1 Estimating the Density of Archaeological Materials	130
3.2 Estimating the Number of Archaeological Sites	131
3.3 Estimating the Proportions of Archaeological Occurrences by Type or Period	131
3.4 Estimating the Proportions of Sites in Different Environments	131
3.5 Estimating Changes in Regional Population or Settlement Area	132
3.6 Creating Locational Models	132
4. CONCLUSION	132
VI. PURPOSIVE SURVEY: PROSPECTION	133
1. PROSPECTING	134
1.1 Surveying for Historically Documented Sites	134
1.1.1 Location of Upper Creek Villages in Alabama	135
1.1.2 Search for <i>La Navidad</i>	135
1.1.3 Nautical Survey for <i>The Monitor</i>	135
1.1.4 Search for the Submerged City of Helike	136
1.2 Using Aerial Photography or Satellite Imagery	136
1.3 Exploiting Structure in Landscapes	137
1.4 Exploiting Structure in Target Interrelationships	138
