

Contents

1. Renewal Processes and Their Computational Aspects.....	1
1.1 Introduction	2
1.2 Basic Renewal Theory	3
1.2.1 Continuous renewal theory	3
1.2.2 Discrete renewal theory	6
1.3 Some Useful Properties of the Renewal Function	7
1.3.1 Specific examples	7
1.3.2 Asymptotic properties	8
1.4 Analytical Approximation Methods	9
1.4.1 Phase renewal processes	9
1.4.2 Gamma approximations	10
1.4.3 Methods based on equilibrium distribution	13
1.5 Bounds	14
1.6 Numerical Methods	16
1.6.1 Laplace inversion technique	17
1.6.2 Cubic spline algorithm	18
1.6.3 Discretization algorithm	19
1.6.4 Approximation by rational functions	20
1.7 Concluding Remarks	23
 2. Stochastic Orders in Reliability Theory	 31
2.1 Introduction	31
2.2 Definitions and Basic Properties	32
2.2.1 Stochastic orders generated from univariate functions	33
2.2.2 Conditional stochastic orders	37
2.2.3 Bivariate characterization of stochastic orders	41
2.3 Applications in Reliability Theory	42
2.3.1 Notions of aging	42
2.3.2 Useful stochastic inequalities in reliability theory	47
2.3.3 Stochastic comparisons of system reliabilities	48
2.3.4 Redundancy improvement	51
2.3.5 Stochastic comparisons of maintenance policies	53
2.3.5.1 Replacements upon failures	53
2.3.5.2 Age replacement	54

2.3.5.3	Block replacement	55
2.3.5.4	Minimal repair	56
2.3.5.5	Minimal repair with block replacement	56
2.3.5.6	Stochastic comparison of different maintenance policies	57
2.A	TP ₂ Functions	63
3.	Classical Maintenance Models	65
3.1	Introduction	65
3.2	Block Replacement	67
3.3	Age Replacement	71
3.4	Order Replacement	75
3.5	Inspection Strategies	79
3.6	Conclusions	81
4.	A Review of Delay Time Analysis for Modelling Plant Maintenance	89
4.1	Introduction	89
4.2	Maintenance Practice	93
4.3	The Delay Time Concept	94
4.4	Basic Delay Time Maintenance Model: Complex Plant	96
4.5	Basic Maintenance Model: Component Tracking	97
4.6	Relaxation of Assumptions	98
4.7	Non-perfect Inspection	98
4.8	Non-steady-state Condition	99
4.9	Non-homogeneous Defect Arrival Rate λ	100
4.10	Condition-dependent Cost and Downtime for Repair	102
4.11	Case Experience Using Subjective Data: Case Experience	103
4.12	Revision of Subjectively Estimated Delay Time Distribution .	106
4.13	Correction for Sampling Bias	106
4.14	Subjective Estimation of the Delay Time Distribution Directly	107
4.15	Objective Estimation of Delay Time Parameters	107
4.16	Case Experience Using Objective Data: HPP of Defect Arrival	110
4.17	Discussion of Further Developments in Delay Time Modelling	115
4.18	Conclusions	116
5.	Imperfect Preventive Maintenance Models	125
5.1	Introduction	125
5.2	Sequential Imperfect Preventive Maintenance	126
5.2.1	Introduction	126
5.2.2	Model A - age	127
5.2.3	Model B - failure rate	128
5.2.4	Numerical examples	129
5.3	Shock Model with Imperfect Preventive Maintenance	131
5.3.1	Introduction	131

5.3.2	Model and expected cost	132
5.3.3	Optimal policies	135
5.4	Conclusions	139
6.	Generalized Renewal Processes and General Repair Models	145
6.1	Background and Motivation	145
6.2	Generalized Renewal Processes	149
6.3	g -Renewal Processes in Discrete Time	153
6.4	Monotonicity and Asymptotic Properties of the g -Renewal Density	155
6.5	On the g -Renewal Function	156
6.6	A General Repair Model	159
7.	Two-Unit Redundant Models	165
7.1	Introduction	165
7.2	Two-Unit Standby System	167
7.2.1	Model and assumptions	167
7.2.2	First-passage time distributions	169
7.2.3	Expected numbers of visits to state	170
7.2.4	Transition probabilities	171
7.3	Preventive Maintenance of Two-Unit Systems	173
7.3.1	Model and analysis	173
7.3.2	Optimum preventive maintenance policies	175
7.3.3	Replacement of a two-unit parallel system	178
7.4	Other Two-Unit Systems	179
7.4.1	Two-unit parallel system	179
7.4.2	Two-unit priority standby system	181
7.4.3	Two-unit standby system with imperfect switchover ..	182
7.4.4	Other models	184
8.	Optimal Maintenance Problems for Markovian Deteriorat- ing Systems	193
8.1	A Basic Optimal Replacement Problem for a Discrete Time Markovian Deteriorating System	193
8.1.1	Some conditions on transition probabilities and cost structure	194
8.1.2	Formulation by Markovian decision process (MDP) ...	194
8.1.3	Optimality of control limit rule	195
8.2	An Optimal Inspection and Replacement Problem	195
8.2.1	Transition probability	196
8.2.2	Formulation by semi-Markov decision process (SMDP)	196
8.2.3	Structure of optimal inspection and replacement policy	197
8.3	An Optimal Inspection and Replacement Policy with Incom- plete Information	199
8.3.1	Some notations and conditions	200

8.3.2	Formulation by partially observable Markov decision process (POMDP)	200
8.3.3	Some properties of TP_2 order	202
8.3.4	Some properties of optimal function	204
8.3.5	Structure of optimal inspection and replacement policy	206
8.4	An Optimal Inspection and Replacement Problem of a Continuous Time Markovian Deteriorating System	207
8.4.1	A continuous time Markovian deteriorating system ...	207
8.4.2	Transition probability	208
8.4.3	Formulation by semi-Markov decision process	209
8.4.4	Structure of optimal policy	209
8.5	An Optimal Maintenance Problem for a Queueing System ...	211
8.5.1	Model description	211
8.5.2	Formulation by semi-Markov decision process	214
8.5.3	Properties of value function	214
8.5.4	Structure of optimal policy	215
9.	Transient Analysis of Semi-Markov Reliability Models – A Tutorial Review with Emphasis on Discrete-Parameter Approaches	219
9.1	Introduction	219
9.2	Modelling Framework	220
9.3	Dependability Measures	222
9.4	Methods of Analysis	226
9.4.1	Continuous-parameter models	226
9.4.2	Discrete-parameter models	233
9.5	Equations for the Dependability Measures	234
9.6	Numerical Solution Techniques	239
9.6.1	Solving the integral equations	239
9.6.2	Discrete-parameter approximations	240
9.7	Recent Developments, Conclusions and Further Work	242
10.	Software Reliability Models	253
10.1	Introduction	253
10.2	Definitions and Software Reliability Model	254
10.3	Software Reliability Growth Modeling	256
10.4	Imperfect Debugging Modeling	260
10.4.1	Imperfect debugging model with perfect correction rate	262
10.4.2	Imperfect debugging model for introduced faults	263
10.5	Software Availability Modeling	265
10.5.1	Model description	265
10.5.2	Software availability measures	266
10.6	Application of Software Reliability Assessment	268
10.6.1	Optimal software release problem	269
10.6.1.1	Maintenance cost model	269

10.6.1.2 Maintenance cost model with reliability requirement.....	271
10.6.2 Statistical software testing-progress control	272
10.6.3 Optimal testing-effort allocation problem	274
11. Reliability Models in Data Communication Systems	281
11.1 Introduction	282
11.2 SW ARQ Model with Intermittent Faults.....	283
11.2.1 Intermittent faults	283
11.2.2 ARQ policy.....	285
11.2.3 Optimal retransmission number	287
11.2.4 Numerical examples and remarks	288
11.3 SR ARQ Model with Retransmission Number	288
11.3.1 Model and analysis	289
11.3.2 Optimal policy	291
11.3.3 Numerical examples and remarks	293
11.4 Hybrid ARQ Models with Response Time	294
11.4.1 Type-I hybrid ARQ.....	295
11.4.2 Type-II hybrid ARQ.....	296
11.4.3 Comparison of type-I and type-II hybrid ARQs	299
11.4.4 Numerical examples and remarks	300
12. Quick Monte Carlo Methods in Stochastic Systems and Reliability	307
12.1 Introduction	307
12.2 The Problem with Direct Simulation	308
12.3 Importance Sampling	309
12.4 The Optimal Change of Measure	310
12.4.1 Remarks	310
12.4.2 Preliminary definitions	311
12.4.3 The recursive approach	312
12.4.4 Exact calculation of $\gamma(x)$	314
12.5 Cases of Application of the Recursive Approach	314
12.6 System Model.....	316
12.7 Regenerative Simulation	318
12.8 Failure Biasing Methods.....	319
12.8.1 Simple failure biasing (SFB)	319
12.8.2 Balanced failure biasing (BFB).....	320
12.8.3 Bias2 failure biasing	321
12.8.4 Failure distance biasing (FDB)	322
12.8.5 Balanced 1 failure biasing (B1FB)	322
12.8.6 Balanced 2 failure biasing (B2FB)	323
12.8.7 Bounded relative error and failure biasing	323
12.9 Unreliability Estimation	323
12.9.1 One-component system	323

XII Contents

12.9.2 General case	324
12.9.3 Example	326
12.10 Analytical-Statistical Methods	326
12.11 Concluding Remarks	329
Index	335
