

Contents

1. Introduction	1
1.1 Momentum Transfer	3
1.2 Heat and Mass Transfer	5
1.3 Relations Between Heat, Momentum and Mass Transfer	7
1.4 Units and Dimensions	10
1.5 Outline of the Book	10
References	13
Problems	13
2. Conservation Equations for Mass, Momentum, and Energy	15
2.1 Introduction	15
2.2 Continuity Equation	16
2.3 Momentum Equations	17
2.4 Internal Energy and Enthalpy Equations	21
2.4.1 Internal Energy Equation	21
2.4.2 Enthalpy Equation	25
2.5 Conservation Equations for Turbulent Flows	27
2.5.1 Continuity and Momentum Equations	27
2.5.2 Enthalpy Equation	30
2.6 Equations of Motion: Summary	32
References	32
Problems	33
3. Boundary-Layer Equations	37
3.1 Introduction	37
3.2 Two-Dimensional Incompressible Flows	38
3.2.1 Laminar Flow	39
3.2.2 Turbulent Flow	41
3.3 Incompressible Axisymmetric Flows	42

3.4	Two-Dimensional Axisymmetric Compressible Flows	44
3.5	Integral Equations	45
3.5.1	Two-Dimensional Flows	45
3.5.2	Axisymmetric Flows	49
3.6	Boundary Conditions	49
	Problems	51
4.	Laminar Boundary Layers	55
4.1	Introduction	55
4.2	Similarity Concept	56
4.3	Falkner-Skan Transformation for External Boundary Layers	57
4.4	Two-Dimensional Similar Flows	60
4.4.1	Solutions for the Velocity Field	62
4.4.2	Solutions for the Temperature Field	65
4.4.3	Solutions for Very Small or Very Large Prandtl Number	67
4.4.4	Sample Numerical Solutions	70
4.5	Two-Dimensional Nonsimilar Flows	72
4.5.1	Pohlhausen's Method	72
4.5.2	Thwaites' Integral Method for the Velocity Field	78
4.5.3	Smith and Spalding's Integral Method for the Temperature Field	81
4.6	Axisymmetric Flows	84
4.6.1	Nonsimilar Flows	87
4.7	Wall Jets and Film Cooling	92
4.8	Free Shear Flows	100
4.8.1	Two-Dimensional Laminar Jet	100
4.8.2	Laminar Mixing Layer between Two Uniform Streams at Different Temperatures	107
	References	109
	Problems	109
5.	Laminar Duct Flows	119
5.1	Introduction	119
5.2	Fully Developed Duct Flow	120
5.2.1	Constant-Area Ducts	120
5.2.2	Ducts of Noncircular Cross Section	124
5.3	Thermal Entry Length for a Fully Developed Velocity Field	126
5.3.1	Transformed Variables	127
5.3.2	Primitive Variables	128
5.3.3	Sample Solutions	129
5.4	Hydrodynamic and Thermal Entry Lengths	130
5.4.1	Transformed Variables	131

5.4.2	Primitive Variables	132
5.4.3	Sample Solutions	134
References	137
Problems	137
6.	Turbulent Boundary Layers	143
6.1	Introduction	143
6.2	Turbulence Models	144
6.2.1	Eddy Viscosity and Turbulent Prandtl Number	144
6.2.2	More Advanced Turbulence Models	146
6.3	Similarity Concept	146
6.4	The Inner Layer	149
6.4.1	The Velocity Profile	149
6.4.2	The Temperature Profile	149
6.4.3	The Logarithmic Profiles	150
6.4.4	The Viscous and Conductive Sublayers	151
6.4.5	The Inner Layer on a Rough Surface	154
6.4.6	Heat Transfer on Rough Surfaces	157
6.5	The Outer Layer	157
6.5.1	The Velocity Profile	157
6.5.2	The Temperature Profile	158
6.6	The Whole Layer	159
6.7	Two-Dimensional Boundary Layers with Zero Pressure Gradient	161
6.7.1	Skin-Friction Formulas on Smooth Surfaces	162
6.7.2	Power-Law Velocity Profiles	164
6.7.3	Heat-Transfer Formulas on Smooth Surfaces with Specified Temperature	167
6.7.4	Heat-Transfer Formulas on Smooth Surfaces with Specified Heat Flux	172
6.7.5	Skin-Friction Formulas on Rough Surfaces	173
6.8	Prediction of Transition	175
6.8.1	Michel's Method	175
6.8.2	H - R_x Method	176
6.9	Two-Dimensional Flows with Pressure Gradient: Integral Methods	177
6.9.1	Head's Method	177
6.9.2	Ambrok's Method	179
6.10	Wall Jets and Film Cooling	180
6.11	Free-Shear Flows	187
6.11.1	Two-Dimensional Turbulent Jet	187
6.11.2	Turbulent Mixing Layer between Two Uniform Streams at Different Temperatures	188

References	190
Problems.....	191
7. Turbulent Duct Flows	195
7.1 Introduction	195
7.2 Fully Developed Duct Flow	195
7.2.1 Velocity Profile and Friction Factor	196
7.2.2 Heat-Transfer Calculations in Smooth Pipes	199
7.2.3 Velocity Profile and Friction Factor in Rough Pipes.....	203
7.2.4 Heat-Transfer Calculations in Rough Pipes	204
7.3 Thermal Entry Length for a Fully Developed Velocity Field	206
7.4 Hydrodynamic and Thermal Entry Lengths	207
7.4.1 Sample Calculations	208
References	210
Problems.....	211
8. Buoyant Flows	215
8.1 Introduction	215
8.2 Natural-Convection Boundary Layers.....	219
8.2.1 Laminar Flow on Vertical Plates	221
8.2.2 Turbulent Flow on Vertical Plates	225
8.2.3 Inclined Plate.....	228
8.2.4 Horizontal Plate	229
8.3 Combined Natural- and Forced-Convection Boundary Layers ...	232
8.4 Wall Jets and Film Heating or Cooling	236
8.5 Natural and Forced Convection in Duct Flows	239
8.6 Natural Convection in Free Shear Flows	245
References	248
Problems.....	249
9. Finite-Difference Solution of Boundary-Layer Equations:	
Internal Flows	251
9.1 Introduction	251
9.2 Review of Numerical Methods for Boundary-Layer Equations ...	251
9.2.1 An Explicit Method	254
9.2.2 An Implicit Method: Crank–Nicolson Method	257
9.2.3 An Implicit Method: Keller’s Box Method	260
9.3 Solution of the Energy Equation for Internal Flows	
with Fully Developed Velocity Profile.....	264
9.3.1 Numerical Formulation	264
References	268
Problems.....	269

10. Finite Difference Solution of Boundary-Layer Equations:	
External Flows	271
10.1 Introduction	271
10.2 Boundary-Layer Equations for Compressible Flows	271
10.3 Cebeci-Smith Algebraic Eddy Viscosity Formulation	273
10.4 Solution of Mass, Momentum and Energy Equations for Boundary-Layer Flows	275
10.4.1 Numerical Formulation	276
10.4.2 Newton's Method	278
10.4.3 Block-Elimination Method	280
References	282
 11. Computer Programs and Their Applications	
to Momentum and Heat Transfer Problems	283
11.1 Introduction	283
11.2 Fortran Program for Compressible Boundary-Layer Flows	284
11.2.1 MAIN	284
11.2.2 Subroutine INPUT	286
11.2.3 Subroutine IVPL	288
11.2.4 Subroutine EDDY	288
11.2.5 Subroutine COEF	289
11.2.6 OUTPUT	289
11.2.7 Sample Calculations	290
11.3 Hess-Smith Panel Method	290
11.4 Forced and Free Convection between Two Vertical Parallel Plates	292
11.4.1 Numerical Formulation	293
11.4.2 Newton's Method	294
11.4.3 Fortran Program	297
11.4.4 Sample Calculations	297
11.5 Wall Jet and Film Heating	298
11.5.2 Numerical Formulation	299
11.5.3 Fortran Program	300
11.5.4 Sample Calculations	300
11.6 Turbulent Free Jet	301
11.6.1 Numerical Formulation	302
11.6.2 Fortran Program	303
11.7 Mixing Layer between Two Uniform Streams at Different Temperatures	304
11.8 Fortran Program for Internal Laminar and Turbulent Flows with Fully Developed Velocity Profile	306
11.8.1 MAIN	308

11.8.2 Subroutine COEF	308
11.8.3 Subroutine OUTPUT	309
11.8.4 Subroutine SOLV2	309
11.8.5 Sample Calculations	309
11.9 Computer Programs for Calculating Momentum and Heat Transfer in Laminar and Turbulent Flows by Integral Methods	314
References	317
Problems	317
Appendix	321
A. Conversion Factors	321
B. Physical Properties of Gases, Liquids, Liquid Metals, and Metals	324
C. Gamma, Beta and Incomplete Beta Functions	337
Subject Index	339
