

# Table of Contents

<b>1</b>	<b>Introduction</b>	<b>1</b>
<b>2</b>	<b>Basic model assumptions</b>	<b>7</b>
2.1	The viscous equations of motion	7
2.1.1	Continuum hypothesis	7
2.1.2	Navier-Stokes equations	8
2.1.3	Tracer equations	9
2.1.4	Phenomenology of turbulence	10
2.1.5	Range of scales	11
2.2	The Reynold's decomposition	15
2.2.1	One-point closures	15
2.2.2	Ensemble averages	15
2.2.3	The Reynold's equations	17
2.2.4	The Reynolds stress and turbulent flux equations	18
2.2.5	The exact equations for turbulent kinetic energy and its dissipation rate	20
2.3	Second-moment closures	21
2.3.1	Pressure-strain correlators	22
2.3.2	Dissipation terms	24
2.3.3	Third moments	25
2.3.4	Tracer cross-correlations	27
<b>3</b>	<b>Boundary layer models</b>	<b>29</b>
3.1	Boundary layers	29
3.1.1	Boundary-layer approximation	29
3.1.2	Algebraisation of second moments	34
3.1.3	Non-equilibrium stability functions	38
3.1.4	Velocity and tracer variances	42
3.1.5	Realisability constraints	43
3.1.6	Quasi-equilibrium stability functions	45
3.2	Two-equation models	49
3.2.1	The TKE-equation	51
3.2.2	Roughness	52
3.2.3	The law of the wall	53
3.2.4	Boundary conditions	55

3.2.5	The $k$ - $\varepsilon$ model .....	57
3.2.6	The $k$ - $kL$ model .....	60
3.2.7	Other approaches .....	62
3.2.8	Homogeneous shear layers .....	63
3.2.9	Two-equation models as dynamic systems .....	63
3.2.10	Analytical solution of idealised system .....	65
3.2.11	The steady-state Richardson number .....	69
3.2.12	Structural equilibrium .....	71
3.2.13	Generic two-equation model .....	76
3.3	Surface and internal wave effects .....	77
3.3.1	Shear-free turbulence .....	78
3.3.2	Wave-enhanced surface layer .....	82
3.3.3	Internal waves .....	90
3.3.4	Langmuir circulation.....	94
<b>4</b>	<b>Numerics .....</b>	<b>97</b>
4.1	General second-order approximation .....	97
4.2	Positive definite quantities .....	101
4.3	Conservation of energy flux .....	103
4.4	Boundary conditions .....	107
<b>5</b>	<b>The GOTM model.....</b>	<b>111</b>
5.1	General introduction .....	111
5.2	Treatment of physics .....	112
5.3	Coupling with three-dimensional models.....	113
5.4	Informatics .....	114
5.5	Applications .....	114
5.6	User group .....	115
<b>6</b>	<b>Idealised test cases .....</b>	<b>117</b>
6.1	Channel flow .....	117
6.2	The Kato-Phillips experiment .....	119
6.2.1	Calibration of $c_{3\varepsilon}$ .....	119
6.2.2	Calibration of $E_3$ .....	121
6.2.3	Stability of second-moment closures.....	127
6.3	The Willis-Deardorff experiment .....	130
<b>7</b>	<b>Oceanic and limnic applications.....</b>	<b>135</b>
7.1	Introduction .....	135
7.2	Northern Pacific Ocean.....	137
7.3	Northern North Sea.....	143
7.3.1	Fladenground Experiment 1976 .....	144
7.3.2	PROVESS-NNS 1998 Experiment .....	149
7.4	Irish Sea .....	160
7.4.1	Seasonally stratified .....	160

7.4.2	Periodically stratified .....	163
7.5	Free convection in Lago Maggiore .....	169
<b>8</b>	<b>Future Perspectives</b> .....	<b>179</b>
<b>9</b>	<b>Appendix</b> .....	<b>185</b>
9.1	Notation .....	185
9.1.1	General comments .....	185
9.1.2	Turbulence models .....	185
9.2	List of symbols .....	187
	<b>References</b> .....	<b>193</b>
	<b>Index</b> .....	<b>213</b>
